

Third Quarter 2018 Results

Forward Looking Statements

The information in this presentation has been prepared as at October 24, 2018. Certain statements contained in this presentation constitute “forward-looking statements” within the meaning of the United States Private Securities Litigation Reform Act of 1995 and “forward-looking information” under the provisions of Canadian provincial securities laws and are referred to herein as “forward-looking statements”. When used in this presentation, the words “anticipate”, “could”, “estimate”, “expect”, “forecast”, “future”, “plan”, “potential”, “will” and similar expressions are intended to identify forward-looking statements. Such statements include, without limitation: the Company's forward-looking production guidance, including estimated ore grades, project timelines, drilling results, metal production, life of mine estimates, total cash costs per ounce, all-in sustaining costs per ounce, minesite costs per tonne, other expenses and cash flows; the estimated timing and conclusions of technical reports and other studies; the methods by which ore will be extracted or processed; statements concerning the Company’s plans to build operations at Meliadine, Amaruq, LaRonde Zone 5 and the Company’s expansion plans at Kittila, including the timing, funding, completion and commissioning thereof and production therefrom; statements concerning other expansion projects, recovery rates, mill throughput, optimization and projected exploration expenditures, including costs and other estimates upon which such projections are based; statements regarding timing and amounts of capital expenditures and other assumptions; estimates of future mineral reserves, mineral resources, mineral production, optimization efforts and sales; estimates of mine life; estimates of future capital expenditures and other cash needs, and expectations as to the funding thereof; statements as to the projected development of certain ore deposits, including estimates of exploration, development and production and other capital costs and estimates of the timing of such exploration, development and production or decisions with respect to such exploration, development and production; estimates of mineral reserves and mineral resources; statements regarding the Company’s ability to obtain the necessary permits and authorizations in connection with its exploration, development and mining operations and the anticipated timing thereof; statements regarding anticipated future exploration; and the anticipated timing of events with respect to the Company’s mine sites and statements regarding the sufficiency of the Company’s cash resources and other statements regarding anticipated trends with respect to the Company's operations, exploration and the funding thereof. Such statements reflect the Company’s views as at the date of this presentation and are subject to certain risks, uncertainties and assumptions, and undue reliance should not be placed on such statements. Forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by Agnico Eagle as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The material factors and assumptions used in the preparation of the forward looking statements contained herein, which may prove to be incorrect, include, but are not limited to, the assumptions set forth herein and in management's discussion and analysis (“MD&A”) and the Company's Annual Information Form (“AIF”) for the year ended December 31, 2017 filed with Canadian securities regulators and that are included in its Annual Report on Form 40-F for the year ended December 31, 2017 (“Form 40-F”) filed with the U.S. Securities and Exchange Commission (the “SEC”) as well as: that there are no significant disruptions affecting operations; that production, permitting, development and expansion at each of Agnico Eagle's properties proceeds on a basis consistent with current expectations and plans; that the relevant metal prices, foreign exchange rates and prices for key mining and construction supplies will be consistent with Agnico Eagle's expectations; that Agnico Eagle's current estimates of mineral reserves, mineral resources, mineral grades and metal recovery are accurate; that there are no material delays in the timing for completion of ongoing growth projects; that the Company’s current plans to optimize production are successful; and that there are no material variations in the current tax and regulatory environment. Many factors, known and unknown, could cause the actual results to be materially different from those expressed or implied by such forward looking statements. Such risks include, but are not limited to: the volatility of prices of gold and other metals; uncertainty of mineral reserves, mineral resources, mineral grades and mineral recovery estimates; uncertainty of future production, project development, capital expenditures and other costs; foreign exchange rate fluctuations; financing of additional capital requirements; cost of exploration and development programs; mining risks; community protests, including by First Nations groups; risks associated with foreign operations; the unfavorable outcome of litigation involving the Canadian Malartic General Partnership (the “Partnership”); governmental and environmental regulation; the volatility of the Company’s stock price; and risks associated with the Company’s currency, fuel and by-product metal derivative strategies. For a more detailed discussion of such risks and other factors that may affect the Company’s ability to achieve the expectations set forth in the forward-looking statements contained in this presentation, see the AIF and MD&A filed on SEDAR at www.sedar.com and included in the Form 40-F filed on EDGAR at www.sec.gov, as well as the Company’s other filings with the Canadian securities regulators and the SEC. Other than as required by law, the Company does not intend, and does not assume any obligation, to update these forward-looking statements.

Currency

All amounts in this presentation are expressed in U.S. dollars except as otherwise noted.

Further Information

For further details on Agnico Eagle’s third quarter 2018 results, please see the Company’s news release dated October 24, 2018.

Notes to Investors

Note Regarding the Use of Non-GAAP Financial Measures

This presentation discloses certain measures, including “total cash costs per ounce”, “all-in sustaining costs per ounce” and “minesite costs per tonne” that are not standardized measures under IFRS. These data may not be comparable to data reported by other issuers. For a reconciliation of these measures to the most directly comparable financial information reported in the consolidated financial statements prepared in accordance with IFRS and for an explanation of how management uses these measures, see “Non-GAAP Financial Performance Measures” in the MD&A filed on SEDAR at www.sedar.com and included in the Form 6-K filed on EDGAR at www.sec.gov, as well as the Company’s other filings with the Canadian securities regulators and the SEC.

The total cash costs per ounce of gold produced is reported on both a by-product basis (deducting by-product metal revenues from production costs) and co-product basis (without deducting by-product metal revenues). Unless otherwise specified total cash costs per ounce of gold produced is reported on a by-product basis in this presentation. The total cash costs per ounce of gold produced on a by-product basis is calculated by adjusting production costs as recorded in the consolidated statements of income for by-product revenues, unsold concentrate inventory production costs, smelting, refining and marketing charges and other adjustments, and then dividing by the number of ounces of gold produced. The total cash costs per ounce of gold produced on a co-product basis is calculated in the same manner as the total cash costs per ounce of gold produced on a by-product basis except that no adjustment is made for by-product metal revenues. Accordingly, the calculation of total cash costs per ounce of gold produced on a co-product basis does not reflect a reduction in production costs or smelting, refining and marketing charges associated with the production and sale of by-product metals. The total cash costs per ounce of gold produced is intended to provide information about the cash-generating capabilities of the Company’s mining operations. Management also uses these measures to monitor the performance of the Company’s mining operations. As market prices for gold are quoted on a per ounce basis, using the total cash costs per ounce of gold produced on a by-product basis measure allows management to assess a mine’s cash-generating capabilities at various gold prices.

All-in sustaining costs per ounce (“AISC”) is used to show the full cost of gold production from current operations. The Company calculates all-in sustaining costs per ounce of gold produced on a by-product basis as the aggregate of total cash costs per ounce on a by-product basis, sustaining capital expenditures (including capitalized exploration), general and administrative expenses (including stock options) and reclamation expenses. The all-in sustaining costs per ounce of gold produced on a co-product basis is calculated in the same manner as the all-in sustaining costs per ounce of gold produced on a by-product basis, except that the total cash costs per ounce on a co-product basis are used, meaning no adjustment is made for by-product metal revenues. Management is aware that these per ounce measures of performance can be affected by fluctuations in foreign exchange rates and, in the case of total cash costs per ounce of gold produced on a by-product basis, by-product metal prices. Management compensates for these inherent limitations by using these measures in conjunction with other data prepared in accordance with IFRS.

Minesite costs per tonne are calculated by adjusting production costs as recorded in the consolidated statements of income for unsold concentrate inventory production costs, and then dividing by tonnes of ore processed. As the total cash costs per ounce of gold produced can be affected by fluctuations in by product metal prices and foreign exchange rates, management believes that minesite costs per tonne provides additional information regarding the performance of mining operations, eliminating the impact of varying production levels. Management also uses this measure to determine the economic viability of mining blocks. As each mining block is evaluated based on the net realizable value of each tonne mined, in order to be economically viable the estimated revenue on a per tonne basis must be in excess of the minesite costs per tonne. Management is aware that this per tonne measure of performance can be impacted by fluctuations in processing levels and compensates for this inherent limitation by using this measure in conjunction with production costs prepared in accordance with IFRS.

Note Regarding Production Guidance

The gold production guidance is based on the Company’s mineral reserves but includes contingencies and assumes metal prices and foreign exchange rates that are different from those used in the mineral reserve estimates. These factors and others mean that the gold production guidance presented in this presentation does not reconcile exactly with the production models used to support these mineral reserves.

The Company's production guidance at Meliadine is based, in part, on the results of preliminary economic assessments. These preliminary economic assessments include inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the production guidance set out in this presentation will be realized. The preliminary economic assessment used in respect of the Meliadine mine project included 3.6 million contained ounces of inferred mineral resource, 3.3 million contained ounces of measured and indicated mineral resource and 3.4 million contained ounces of proven and probable mineral reserve. For further information on the Company's production guidance at Meliadine, including the qualifications and assumptions made in connection with the preparation of the assessments, please see the Company's press release dated February 14, 2018 and the Company's AIF, as well as the Company's other filings with the Canadian securities regulators and the SEC.

Agnico Eagle – A High Quality Low Risk Growth Story

Our Competitive Position: Growing Production Base, High Quality Long Life Assets and Proven Value Creating Strategy

- Strong operational performance, meeting or exceeding targets and generating significant cash flow with strong safety performance
- Gold reserves are growing and gold grades are also improving
  - Expect ongoing conversion of M&I mineral resources into mineral reserves at key operations
- Anticipated growth in gold production to 2.0Moz in 2020 drives rising free cash flow
  - Upside beyond the 2.0Moz of gold expected in 2020
  - Production growth from assets we currently own, in areas we currently operate in
  - Growth funded by cash on hand, operating cash flow and, if needed, drawings on line of credit
- Low political risk in stable, pro-mining jurisdictions
- Project pipeline provides additional opportunities to add value longer term
- Broad range of technical skills and experience to deliver on plan with achievable targets

Third Quarter 2018 Highlights

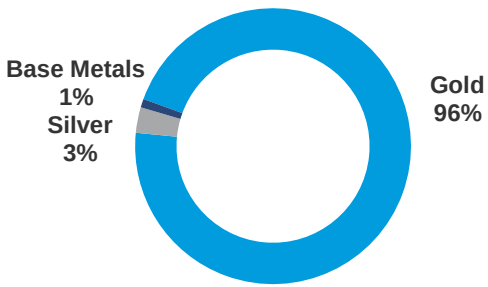

- **Strong quarterly production and cost performance continues** - Payable gold production in Q3 2018 was 421,718 ounces at production costs per ounce of $657, total cash costs per ounce of $637 and AISC of $848 per ounce
- **Production guidance increased for 2018 and 2019** - Production guidance is now forecast to be ~1.60Mozs of gold in 2018, compared to previous guidance of 1.58Mozs. Total cash costs per ounce and AISC are expected to be at or slightly below the mid-point of the 2018 guidance range ($625 to $675 per ounce and $890 to $940 per ounce, respectively). Given the positive development progress in Nunavut, 2019 production guidance is now forecast to exceed the mid-point of the current guidance range (1.63 to 1.77 million ounces). The Company will update its 2019 production guidance in February 2019
- **Meliadine on budget and slightly ahead of schedule** - At the end of Q3 2018, construction was 89% completed and underground development was proceeding as planned. Commissioning of the process plant is expected to begin in Q1 2019, followed by the expected commencement of commercial production in Q2 2019
- **Amaruq continues to advance on schedule and on budget for 2018** - Expansion of the haulage road and exterior construction activities are scheduled to be completed in the fourth quarter of 2018. The first ore is expected to be mined early in Q2 2019 with initial production from the Whale Tail deposit expected to begin in Q3 2019
- **Drilling at Amaruq continues to expand mineralized zones at depth, further highlighting the potential for mining underground** - Recent drilling cut 19.6 g/t gold over 5.6 metres at 656 metres depth, expanding the V Zone westward at depth. Confirmation drilling in the Whale Tail North deposit returned 19.5 g/t gold over 7.0 metres at 477 metres depth. Intercepts, such as 14.2 g/t gold over 5.1 metres at 698 metres depth, reopen and expand the deep potential of the Whale Tail deposit to the west. Underground ramp development is continuing at Amaruq, and the Company is evaluating potential underground mining scenarios
- **A quarterly dividend of $0.11 per share was declared**

Operating Results

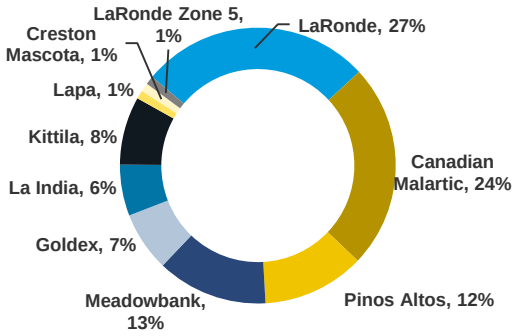

Stable Operational Performance

	Q3 2018			Q3 YTD 2018	
	Production (Gold oz)	Total Cash Costs ($/oz)	Operating Margin ($000's)	Production (Gold oz)	Total Cash Costs ($/oz)
Northern Business					
LaRonde	88,353	$514	$65,405	262,664	$446
LaRonde Zone 5	3,823	$897	$2,402	8,424	$842
Lapa	10,464	$1,061	$1,467	26,719	$916
Goldex	31,255	$611	$17,837	89,659	$654
Canadian Malartic (50%)	88,602	$572	$58,478	263,868	$558
Kittila	49,459	$813	$19,115	139,626	$876
Meadowbank	68,259	$694	$32,816	189,333	$839
	340,215	**$639**	**$197,520**	**980,293**	**$649**
Southern Business					
Pinos Altos	46,405	$533	$29,072	131,887	$560
Creston Mascota	8,024	$996	$1,660	28,728	$882
La India	27,074	$685	$13,569	75,049	$682
	81,503	**$629**	**$44,301**	**235,664**	**$638**
Total	**421,718**	**$637**	**$241,821**	**1,215,957**	**$647**

Q3 2018 Revenue by Metal

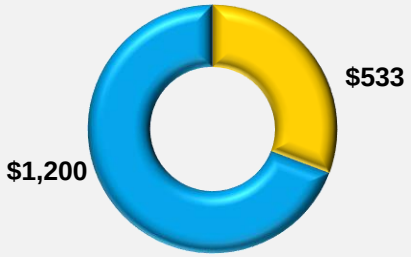

Q3 2018 Total Operating Margin – $241.8M

Financial Position

Strong Financial Liquidity Underpins Current Growth Phase

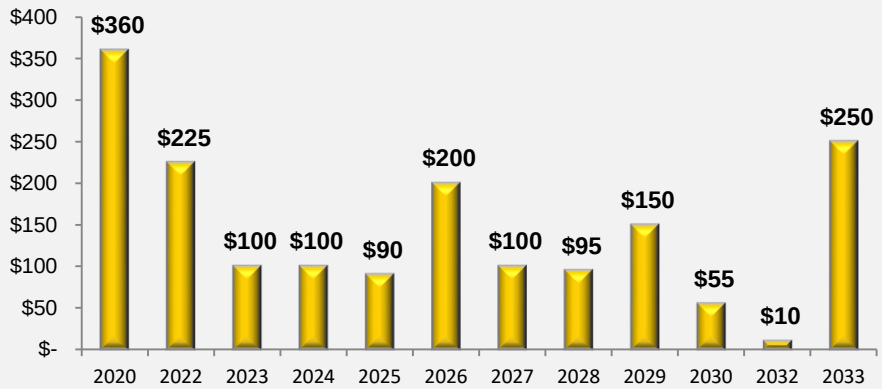

Strong Available Liquidity - $1.7B*

Cash and cash equivalents Undrawn credit facilities

*As at September 30, 2018, excluding accordion

Debt Maturities**

**As at September 30, 2018

- As at September 30, 2018, the Company had strong liquidity with $533 million in cash and cash equivalents and $1.2 billion in undrawn credit lines
- Low share count of 235 million fully diluted shares after 60 years of operating history

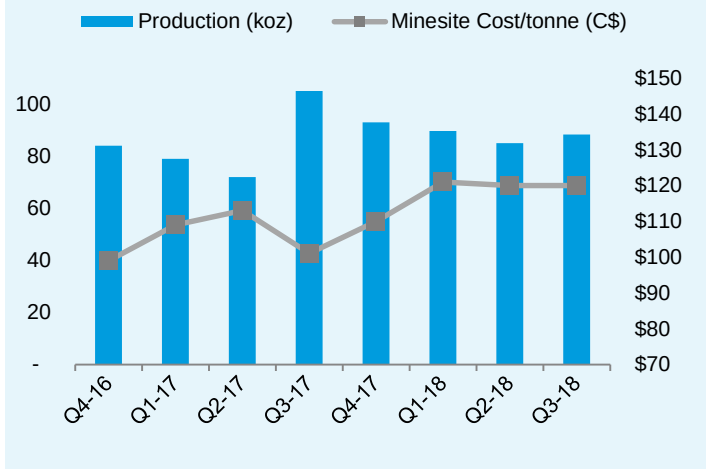

Northern Business

LaRonde

Implementing Technology to Support Future Automated Mining Activities

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
2.6	1.3	0.9	88	$514

- Gold production in Q3 2018 decreased when compared to the prior-year period due to lower tonnage and lower grades resulting from the mining sequence
- Following the successful deployment of the LTE network at LaRonde Zone 5, the Company is installing a similar network at LaRonde. Full coverage below level 269 is expected to be in place by the end of 2018, and the technology will be evaluated for use at LaRonde 3
- The Company is also evaluating the potential to develop Zone 11-3, which is at depth in the past producing Bousquet 2 mine. This zone currently hosts an indicated mineral resource of ~126,000 ounces of gold (824,800 tonnes grading 4.76 g/t gold), and could provide additional production flexibility for the LaRonde complex

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

LaRonde Zone 5 (LZ5)

New Production Fleet Commissioned; Operations Continue to Ramp Up

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
0.4	0.7	0.5	4	$897

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

- Mining will continue at LZ5 over the balance of 2018, but in order to maximize production (tonnage and ounces), ore from LZ5 will be batch processed with ore from Lapa until the end of 2018. Currently stockpiled ore from LZ5 is expected to be processed in October and November
- Productivity at LZ5 is slightly better than expected. Dilution and mining recovery are slightly better than anticipated while mill recovery is higher than forecast
- The LZ5 full production fleet was commissioned in Q3 2018 (two trucks and one scoop tram). Pilot testing of automated mining is expected to start in Q4 2018 for both trucks and the scoop tram

Lapa

Operations Expected to Extend To December 2018

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
0.02	0.09	0.1	10	$1,061

- Mining operations at Lapa are forecast to continue to December 2018 with ore stockpiled in October and November expected to be processed in December. As a result, gold production from Lapa for the full year 2018 is now forecast to exceed 30,000 ounces (previous guidance was 25,000 ounces)
- Underground closure will commence once mining operations have ceased and is expected be completed in early 2019. Surface closure is expected to begin in Q2 2019

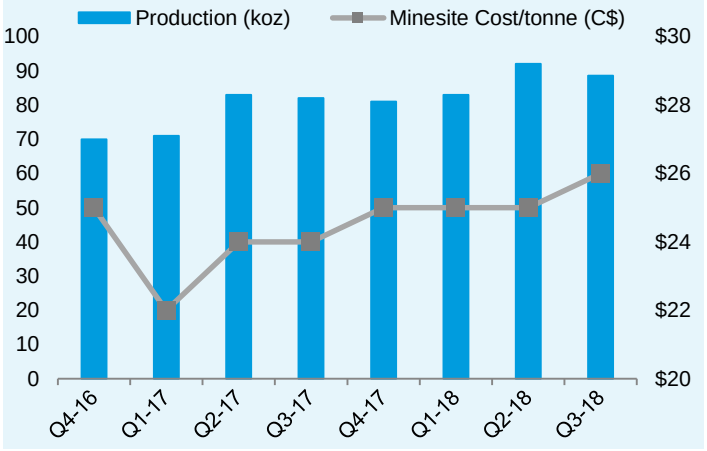

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

Canadian Malartic (50% Interest)

Strong Operational Performance Driven By Higher Grades

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
3.2	0.6	0.2	89	$572

- Gold production in the third quarter of 2018 increased when compared to the prior-year period due to higher throughput and higher grades, partially offset by slightly lower gold recoveries
- Work on the Barnat extension project is proceeding on budget and on schedule. Work is primarily focused on the highway 117 road deviation, overburden stripping and tailings expansion. Production activities at Barnat are scheduled to begin in late 2019

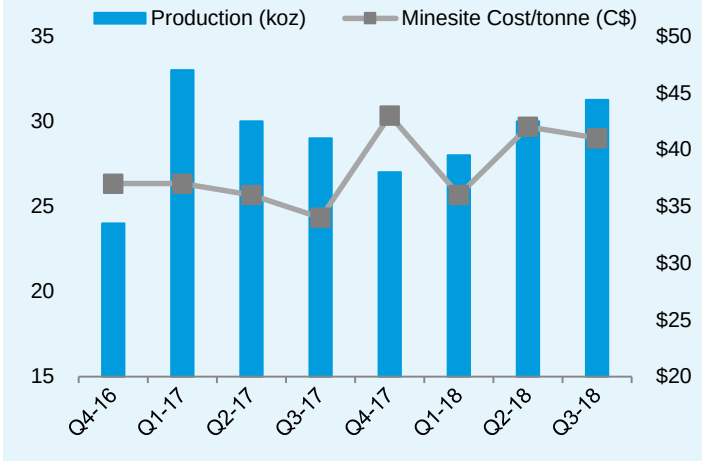

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

Goldex

Extent of South Zone Greater Than Expected; Potential for Increased Throughput Levels

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
0.9	1.8	1.3	31	$611

- Drilling and development is ongoing in the South Zone, which is accessible from the Deep 1 Zone infrastructure. The South Zone consists of quartz veins that have higher grades than those in the primary mineralized zones at Goldex
- The Company is evaluating the potential for the South Zone to provide incremental ore feed to the Goldex mill. Additional development continued at level 106, as a result of better than expected grades. The Company believes that there is potential to increase mining throughput from the South Zone. A test stope in the South Zone is expected to be mined in Q4 2018
- The Company continues to review the timeline for the integration of the Akasaba West project into the Goldex production profile

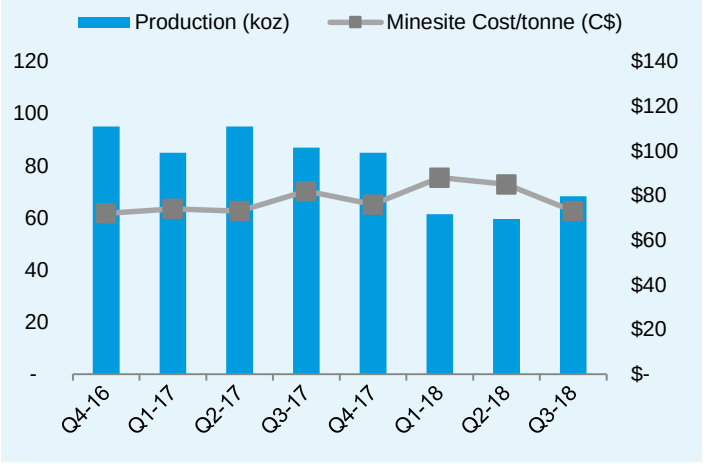

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

Meadowbank

Strong Q3 2018 Performance Driven by Better Than Expected Grade and Throughput

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
0.3	0.2	0.1	68	$694

- Gold production in Q3 2018 was better than Q2 2018 as a result of higher grades and increased tonnage. During the quarter, mining activities were carried out at both the Vault and Portage deposits and in addition, ore was sourced from the marginal stockpile. For all three sources of ore, grades were slightly better than expected
- Tonnage in Q3 2018 was better than expected due to the operation of the secondary crusher and a higher ratio of Portage ore (softer) versus Vault ore processed

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

Amaruq Project Update

Exterior Construction Expected to be Completed in December 2018; Underground Ramp Progressing Well; Exploration Continues to Extend Whale Tail and V Zones at Depth

- Construction activities related to the Whale Tail dike and overburden and waste stripping for Phase 1 of the Whale Tail Pit began in July 2018. Work in Q3 2018 included process plant modifications, expansion of the haulage road, construction of a permanent camp and a new mobile maintenance shop. Road and exterior construction activities are expected to be completed by year-end 2018
- Recent drilling at Amaruq intersected 19.6 g/t gold over 5.6 metres at 656 metres depth, expanding the V Zone westward at depth. A hole in the Whale Tail North deposit returned 19.5 g/t gold over 7.0 metres at 477 metres depth, which could expand the mineral resources outline
- Given ongoing positive drill results from Whale Tail and V-Zone deposits at depth, and the potential to develop an underground mining scenario at Amaruq, in Q3 2018 the Company began capitalizing underground ramp expenditures
- The Whale Tail Expansion permitting process for open pit mining activities at the V Zone and Whale Tail underground commenced on October 15, 2018

Meliadine Project Update

Sealift Completed; Construction Activities are Slightly Ahead of Schedule and on Budget; Potential to Accelerate Commencement of Production

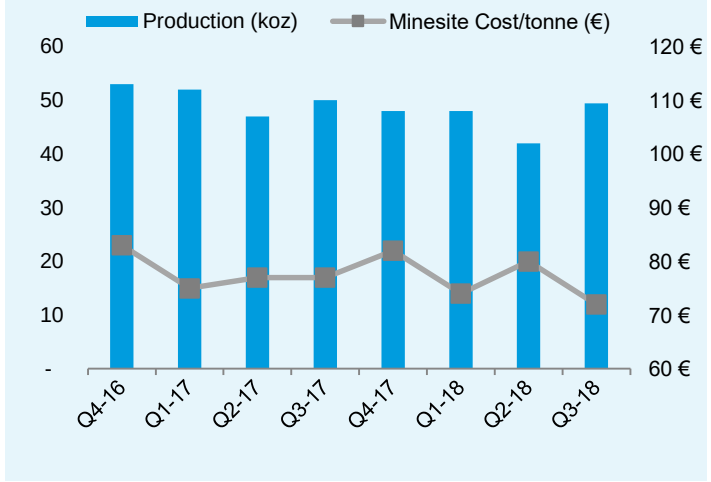

- At September 30, 2018, site construction was 89% complete and underground development activities were progressing as planned
- During Q3 2018 the sealift was largely completed, as was the Rankin Inlet bypass road. Hauling of materials to site can now proceed on a 24-hour basis
- Production drilling for the first stope began on September 19, 2018, ahead of schedule by approximately two weeks. Four stopes are expected to be completed by year-end 2018. The process plant is expected to start up using a 150,000 to 200,000-tonne stockpile of development ore grading approximately 8.5 g/t gold
- The project remains on budget and slightly ahead of schedule for the commencement of commercial production in the second quarter of 2019. The estimated capital budget for 2018 is unchanged at $398 million

Kittila

Record Quarterly Mill Throughput in the Third Quarter of 2018

Proven & probable gold reserves (million oz)	Measured & indicated gold resources (million oz)	Inferred gold resource (million oz)	Q3 2018 Production (koz)	Q3 2018 Total Cash Costs/oz
4.1	2.1	1.3	49	$813

- Despite record quarterly mill throughput, gold production in Q3 2018 decreased when compared to the prior-year period due to lower grades and recoveries. Grades are expected to remain slightly below guidance for the remainder of 2018 primarily due to the mining sequence. The lower grades are expected to be partially offset by higher throughput
- An 8-10 day scheduled autoclave maintenance shutdown will be carried out in late October 2018
- In February 2018, an underground shaft and mill expansion to increase throughput rates at Kittila was approved. This expansion is progressing on schedule and on budget. Shaft raise boring for the first 325 metres was completed in August, and slashing is expected to start at the end of October
- Phase 1 of the mill expansion remains on schedule and on budget. Engineering was finalized in Q3 2018, and civil and structural work has begun

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

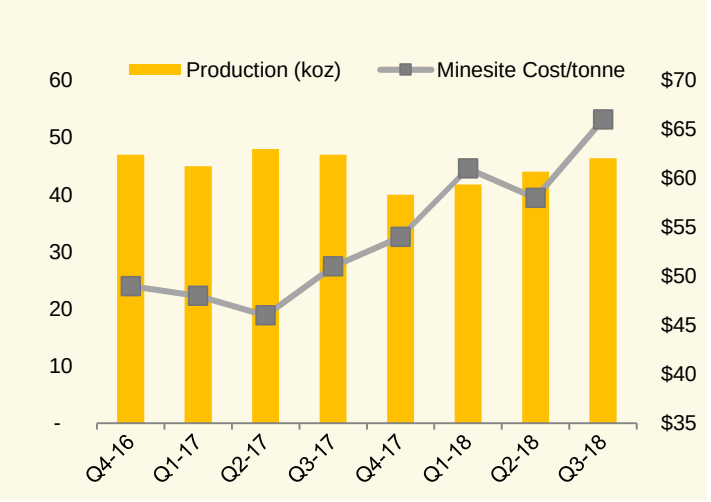

Southern Business

Pinos Altos

Sinter Underground Development Underway; Access to Mineralization Expected in Q4 2018

Proven & probable gold reserves (million oz)	**Measured & indicated gold resources** (million oz)	**Inferred gold resource** (million oz)	**Q3 2018 Production** (koz)	**Q3 2018 Total Cash Costs/oz**
1.3	**0.9**	**0.5**	**46**	**$533**

- The Sinter and Cubiro satellite deposits at Pinos Altos continued to advance in Q3 2018. At Sinter, underground development has begun with 400 metres of lateral development and ancillary drifts completed. Initial production from Sinter is expected to commence in Q4 2018
- At the Cubiro deposit, access road construction was completed in Q3 2018. Ramp development preparation began in September and 460 metres of underground development is planned to start in Q4 2018. Underground exploration and delineation drilling is expected to commence in 2019
- The Company is currently installing an ore sorting pilot plant with the goal of improving feed grades to the processing facilities. Testing is expected to begin in late October and continue for approximately six months. Samples will be processed from all the ore bodies to determine the merits of implementing the technology. Similar ore sorting pilot testing is being considered in the Company's other operating regions

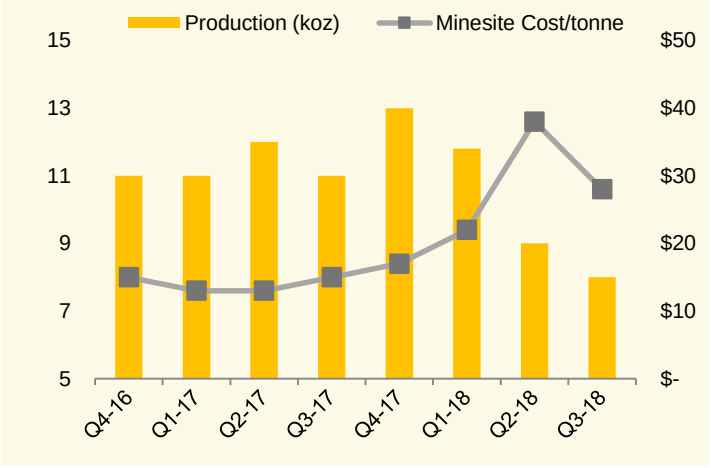

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

Creston Mascota

Bravo Pit Now in Full Production; Expected to Provide Access to Higher Grade Ore

Proven & probable gold reserves (million oz)	**Measured & indicated gold resources** (million oz)	**Inferred gold resource** (million oz)	**Q3 2018 Production** (koz)	**Q3 2018 Total Cash Costs/oz**
0.1	**0.1**	**0.01**	**8**	**$996**

- Mining at the main Bravo pit began in September. The Company expects to increase production levels and gold grades by in Q4 2018
- A new waste rock storage site has been located closer to the Bravo deposit, which is expected to reduce waste haulage costs. Permits for this new waste dump are expected to be received by the end of 2018
- Work relating to the Phase V heap leach pad expansion was paused from mid-August to late September as a result of the rainy season. The heap leach pad expansion is ongoing and proceeding on budget with completion now expected in Q4 2018

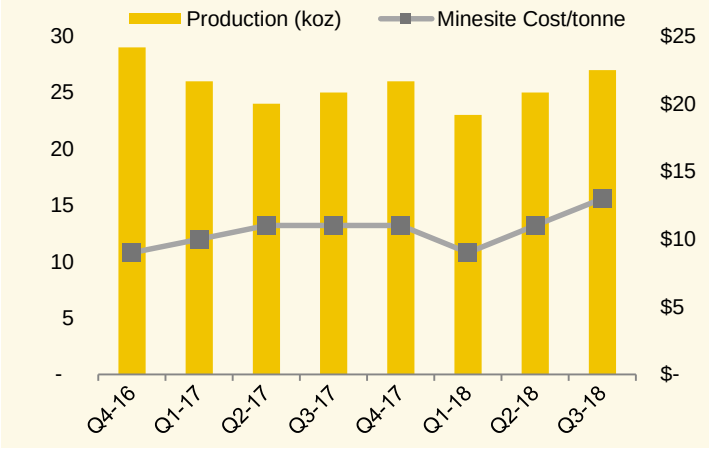

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

La India

Heap Leach Optimizations Completed; Improved Gold Production in Q3 2018

Proven & probable gold reserves (million oz)	**Measured & indicated gold resources** (million oz)	**Inferred gold resource** (million oz)	**Q3 2018 Production** (koz)	**Q3 2018 Total Cash Costs/oz**
0.7	**0.4**	**0.1**	**27**	**$685**

- Optimization work on the La India adsorption, desorption and recovery plant and commissioning of the carbon regeneration kiln was completed in the third quarter of 2018. These modifications to the plant contributed to the higher gold production in the quarter
- Detailed engineering regarding the heap leach expansion is in progress and is expected to be completed by late October, with construction to begin in Q4 2018. Completion of the heap leach expansion is expected in Q2 2019
- Drilling at El Realito in Q3 2018 focused on testing targets outside the current pit margin. Hole INER18-203 intersected 1.2 g/t gold and 15 g/t silver over 7.4 metres at 30 metres depth in the northwest part of the zone, outside of the current mineral resources area. The El Realito mineralized system remains open along strike (northeast and southwest) and shows significant potential at depth

See AEM February 14, 2018 press release and appendix for detailed breakdown of mineral reserves and mineral resources

Building A Long Term, Sustainable, Self Funding Business

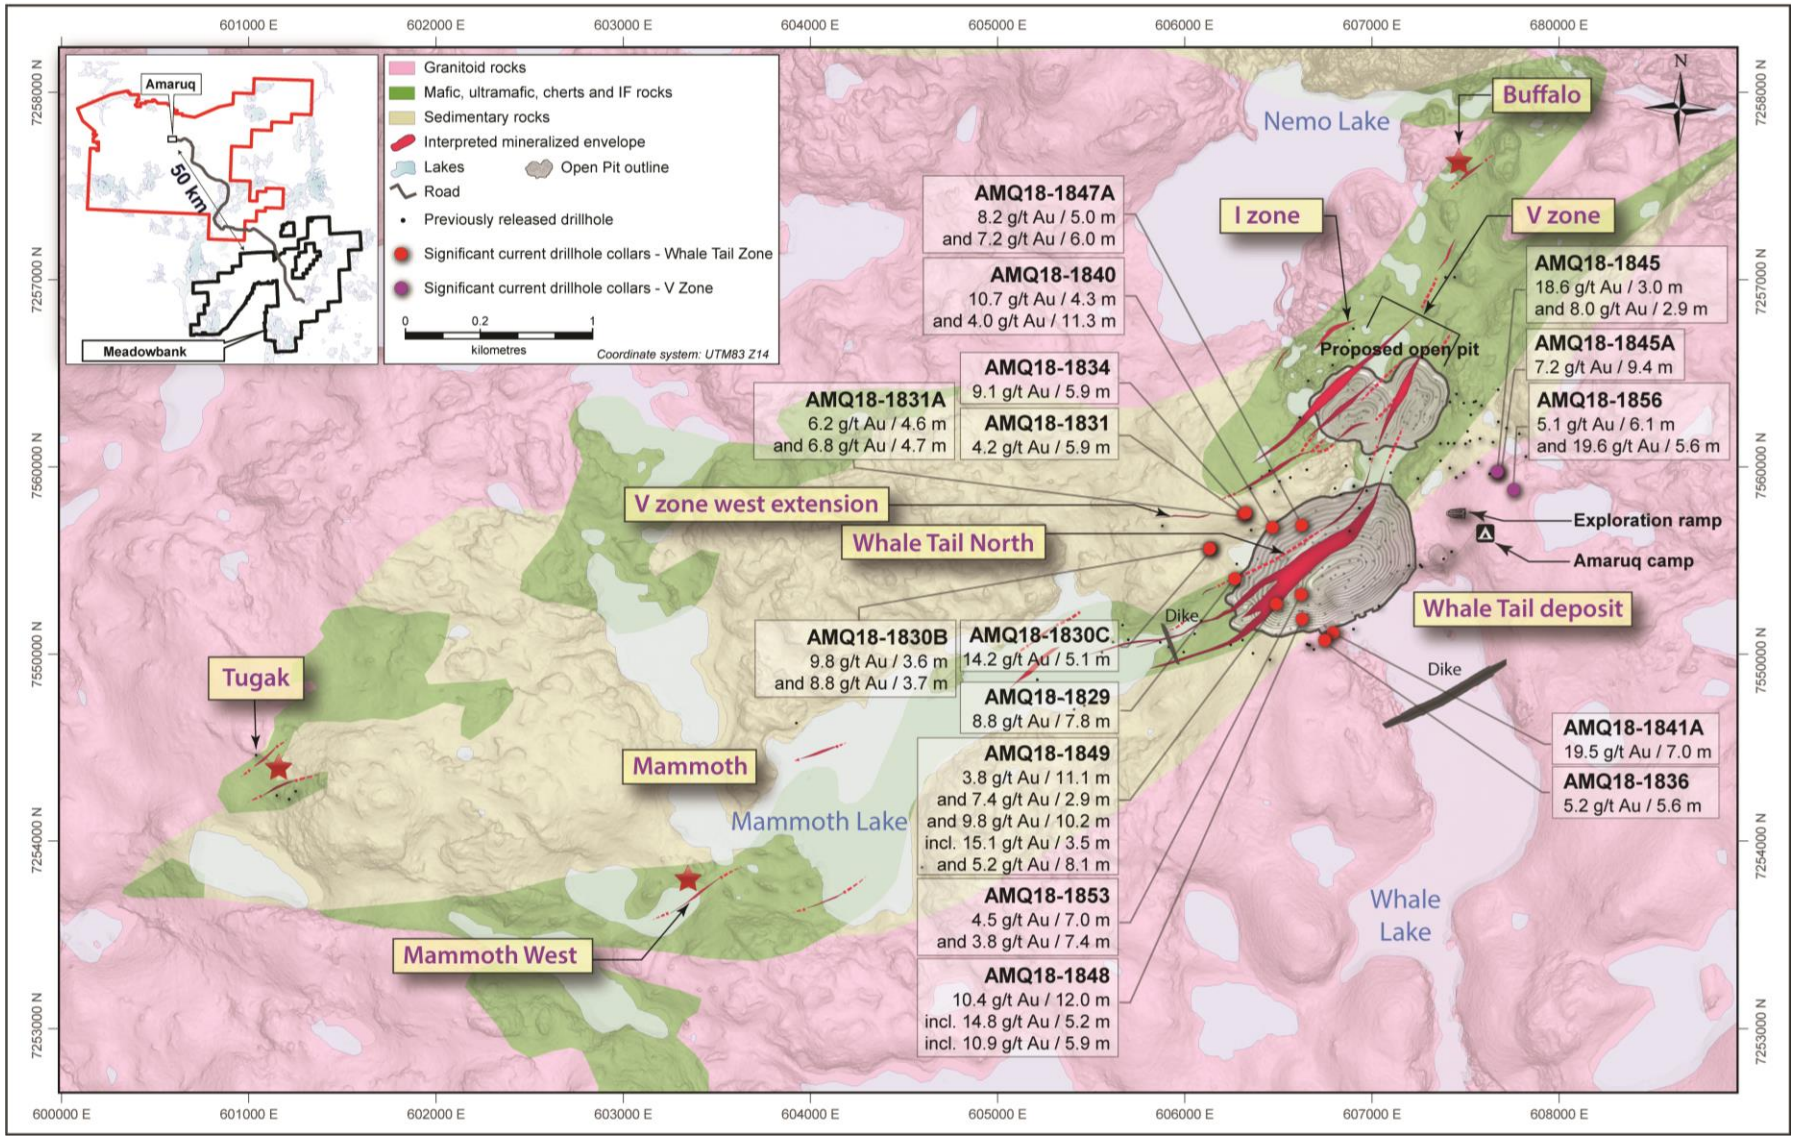

- Consistent Strategy and Solid Execution Drives Superior per Share Returns
- Production Growth – Existing Asset Base Expected to Produce Approximately 2.0 Moz of Gold in 2020 with a strong project pipeline to provide upside beyond this
- Emerging Nunavut Platform – Expanding Production Beginning Next Year in a Region With Significant Exploration Potential
- Focused on Generating Free Cash Flow Post the Buildout of the Nunavut Production Platform
- High Quality Gold Reserves – Growing Gold Reserve Base with Increasing Gold Grades
- Exploration Delivering on Several Fronts – Remains a Key Value Driver
- Strong Balance Sheet with Financial Flexibility
- Consecutive 35 Years of Dividends

Drilling Continues to Infill and Expand the Roura Main Zone and Sisar Top and Central Areas

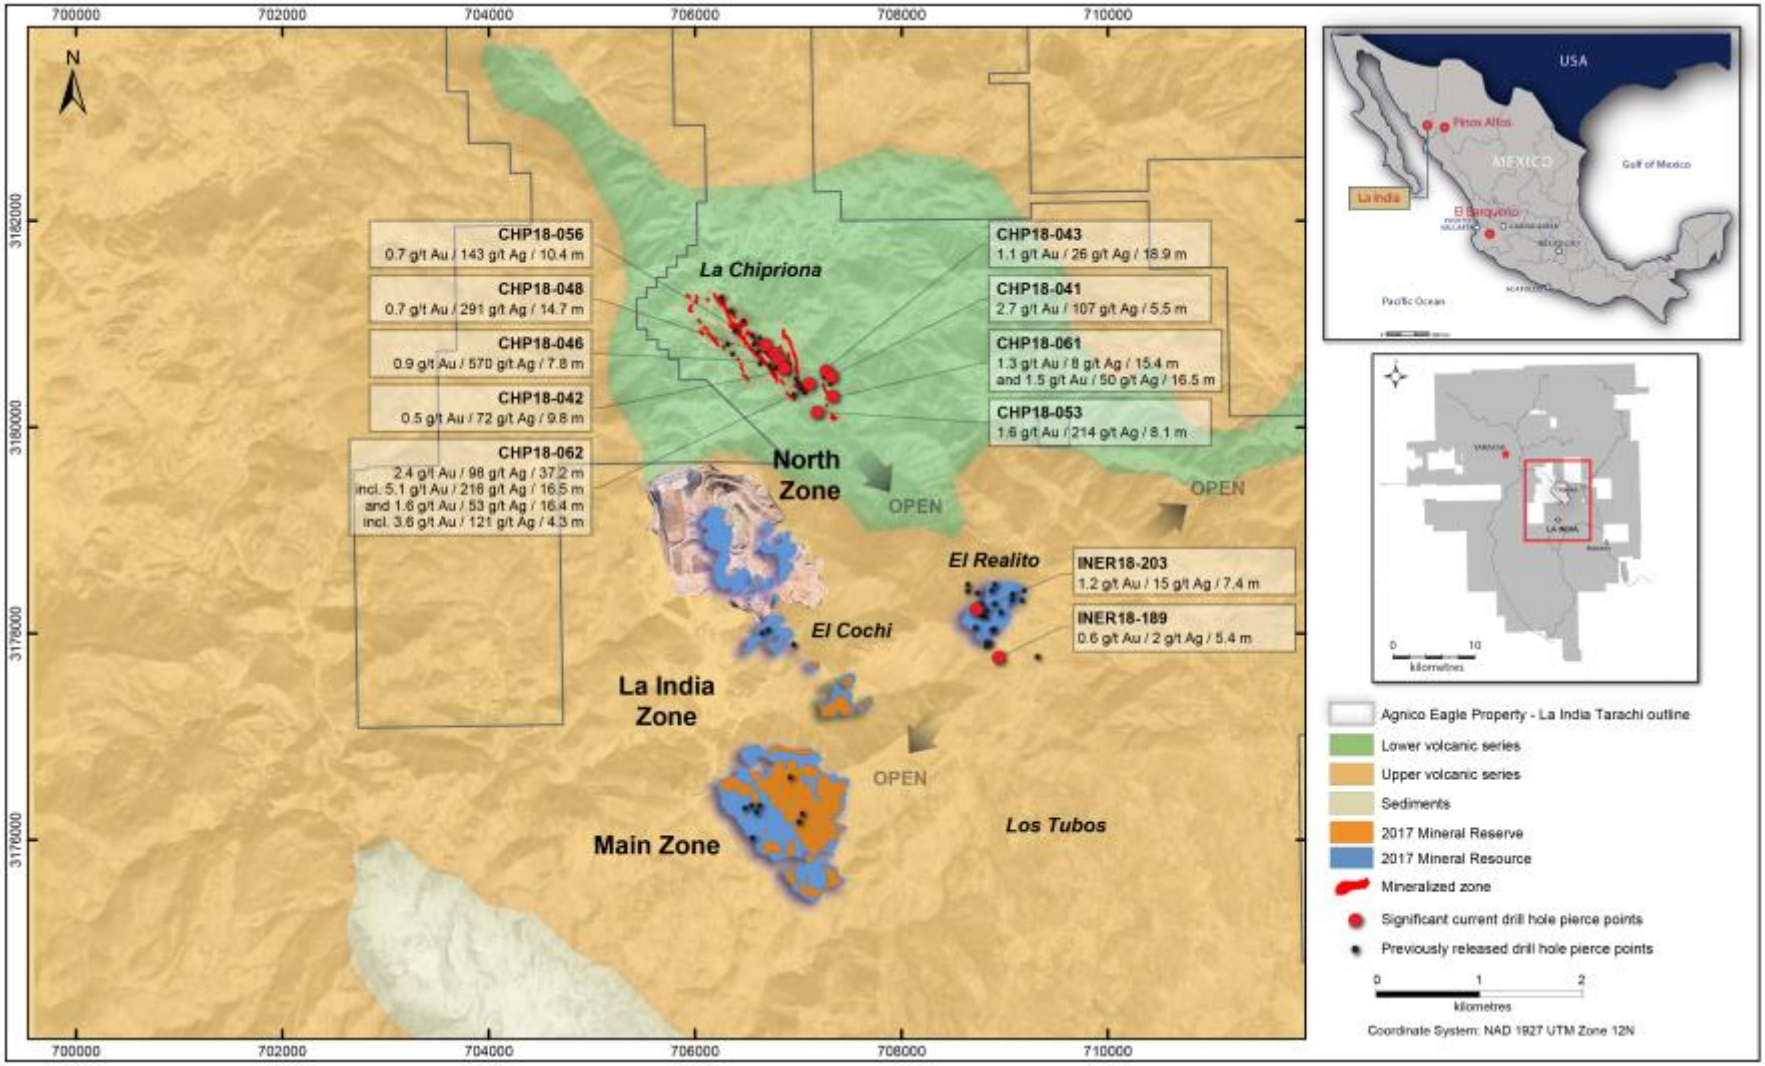

Pinos Altos – Local Geology Map

Drilling Continues to Expand Mineralization at Reyna de Plata

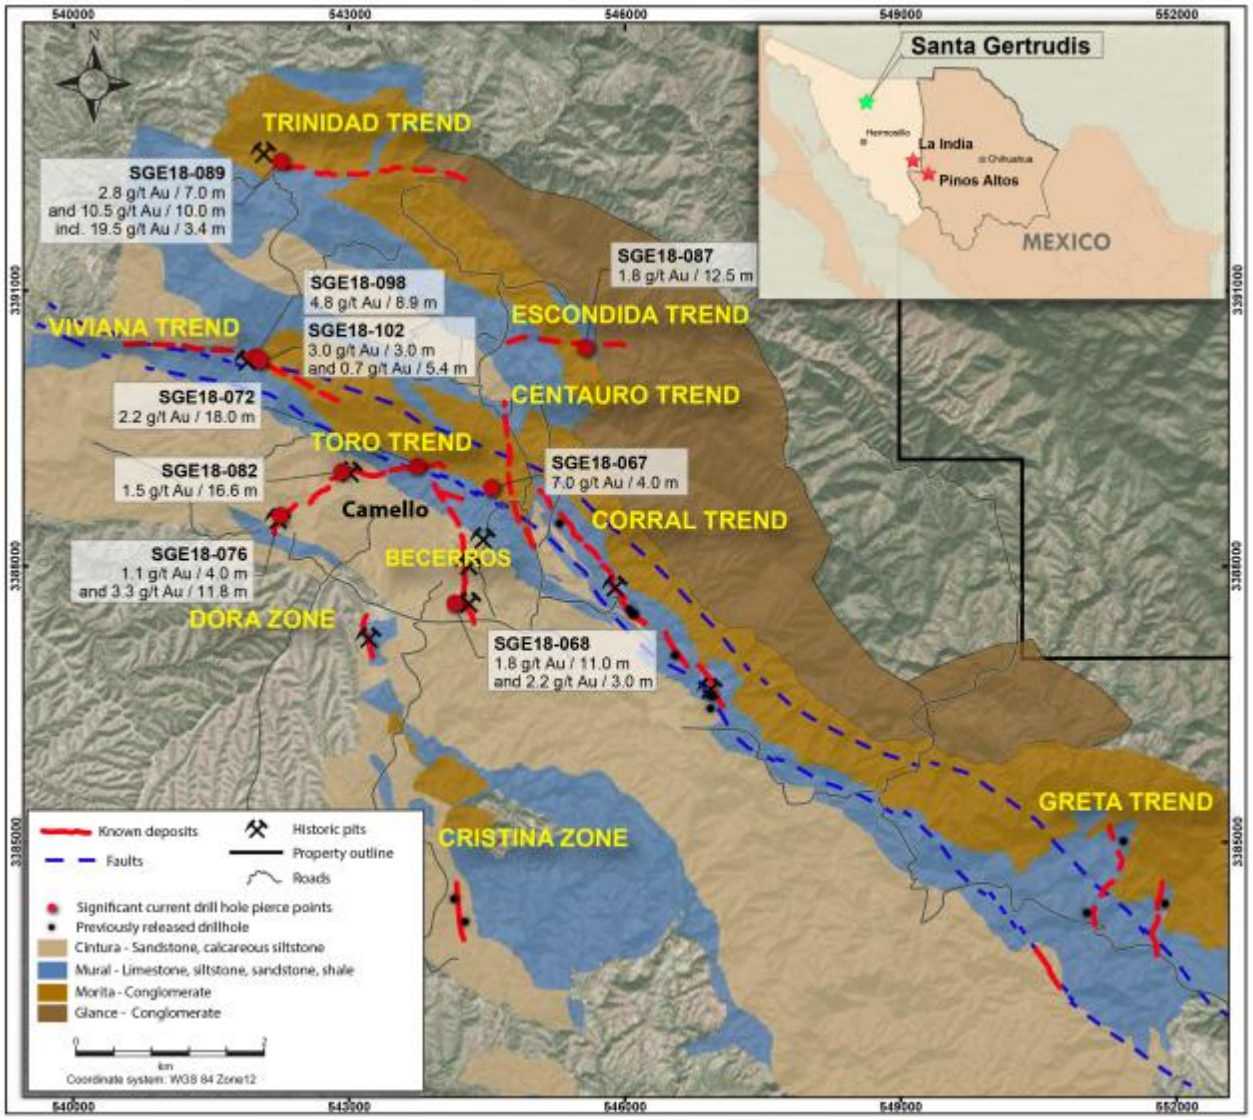

La India – Local Geology Map

Drilling Expands Scope of El Realito and Chipriona Zones

Santa Gertrudis – Local Geology Map

Drilling Confirms Historic Mineral Resources and Results in Discovery of a Higher Grade Zone

- Agnico Eagle holds a 100% interest in the 42,000-hectare Santa Gertrudis gold property
- Three favorable geological trends with a potential strike length of 18 km have been identified with limited drilling between deposits
- In Q3 2018, 13,120 metres were drilled in 89 holes, mainly in the Becerros, Toro, Escondida, Viviana and Trinidad zones. Drilling to validate the historic mineral resource has now been completed and exploration will now focus on mineral resource expansion and testing new target areas like Centauro where a recent hole returned 7.0 g/t gold over 4.0 metres

Mineral Reserves and Mineral Resources

December 31, 2017

Notes to Investors Regarding The Use of Mineral Resources

Cautionary Note to Investors Concerning Estimates of Measured and Indicated Mineral Resources

This presentation uses the terms “measured mineral resources” and “indicated mineral resources”. Investors are advised that while those terms are recognized and required by Canadian regulations, the SEC does not recognize them. **Investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into mineral reserves.**

Cautionary Note to Investors Concerning Estimates of Inferred Mineral Resources

This presentation also uses the term “inferred mineral resources”. Investors are advised that while this term is recognized and required by Canadian regulations, the SEC does not recognize it. “Inferred mineral resources” have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. **Investors are cautioned not to assume that any part or all of an inferred mineral resource exists, or is economically or legally mineable.**

Scientific and Technical Data

Cautionary Note To U.S. Investors - The SEC permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. Agnico Eagle reports mineral reserve and mineral resource estimates in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum *Best Practice Guidelines for Exploration* and *Best Practice Guidelines for Estimation of Mineral Resources and Mineral Reserves* in accordance with the Canadian securities regulatory authorities' (the "CSA") National Instrument 43-101 Standards of Disclosure for Mineral Projects ("NI 43-101"). These standards are similar to those used by the SEC’s Industry Guide No. 7, as interpreted by Staff at the SEC ("Guide 7"). However, the definitions in NI 43-101 differ in certain respects from those under Guide 7. Accordingly, mineral reserve information contained herein may not be comparable to similar information disclosed by U.S. companies. Under the requirements of the SEC, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. A "final" or "bankable" feasibility study is required to meet the requirements to designate mineral reserves under Industry Guide 7. Agnico Eagle uses certain terms in this presentation, such as "measured", "indicated", "inferred" and "resources" that the SEC guidelines strictly prohibit U.S. registered companies from including in their filings with the SEC.

Assumptions used for the December 31, 2017 mineral reserves estimate at all mines and advanced projects reported by the Company

	Metal prices				Exchange rates		
	Gold (US$/oz)	Silver (US$/oz)	Copper (US$/lb)	Zinc (US$/lb)	C$ per US$1.00	Mexican peso per US$1.00	US$ per €1.00
Long-life operations and projects	$1,150	$16.00	$2.50	$1.00	C$1.20	MXP16.00	US$1.15
Short-life operations – Lapa, Meadowbank mine, Santos Nino pit and Creston Mascota satellite operation at Pinos Altos					C$1.25	MXP17.00	Not applicable
Upper Canada, Upper Beaver*, Canadian Malartic mine**	$1,200	Not applicable	$2.75	Not applicable	C$1.25	Not applicable	Not applicable

**The Upper Beaver project has a C$125/tonne net smelter return (NSR)*
***The Canadian Malartic mine uses a cut-off grade between 0.35 g/t and 0.37 g/t gold (depending on the deposit)*

NI 43-101 requires mining companies to disclose mineral reserves and mineral resources using the subcategories of "proven mineral reserves”, "probable mineral reserves”, "measured mineral resources”, "indicated mineral resources” and "inferred mineral resources”. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Notes to Investors Regarding The Use of Mineral Resources

A mineral reserve is the economically mineable part of a measured and/or indicated mineral resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at pre-feasibility or feasibility level as appropriate that include application of modifying factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified.

Modifying factors are considerations used to convert mineral resources to mineral reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.

A proven mineral reserve is the economically mineable part of a measured mineral resource. A proven mineral reserve implies a high degree of confidence in the modifying factors. A probable mineral reserve is the economically mineable part of an indicated and, in some circumstances, a measured mineral resource. The confidence in the modifying factors applying to a probable mineral reserve is lower than that applying to a proven mineral reserve.

A mineral resource is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.

A measured mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with confidence sufficient to allow the application of modifying factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation. An indicated mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An inferred mineral resource is that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity.

Investors are cautioned not to assume that part or all of an inferred mineral resource exists, or is economically or legally mineable.

A feasibility study is a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable modifying factors together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate, at the time of reporting, that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a Pre-Feasibility Study.

The effective date for all of the Company's mineral resource and mineral reserve estimates in this presentation is December 31, 2017. Additional information about each of the mineral projects that is required by NI 43-101, sections 3.2 and 3.3 and paragraphs 3.4 (a), (c) and (d) can be found in the Technical Reports filed by Agnico Eagle, which may be found at www.sedar.com. Other important operating information can be found in the Company's AIF and Form 40-F.

The scientific and technical information relating to Agnico Eagle's mineral reserves and mineral resources contained herein (other than the Canadian Malartic mine) has been approved by Daniel Doucet, Eng., Senior Corporate Director, Reserve Development; and relating to mineral reserves and mineral resources at the Canadian Malartic mine contained herein has been approved by Donald Gervais, P.Geo., Director of Technical Services at Canadian Malartic Corporation. Each of them is a "Qualified Person" for the purposes of NI 43-101.
