Forward Looking Statements

The information in this presentation has been prepared as at August 16, 2019. Certain statements contained in this presentation constitute "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and "forward-looking information" under the provisions of Canadian provincial securities laws and are referred to herein as "forward-looking statements". When used in this presentation, the words "anticipate", "could", "estimate", "expect", "forecast", "future", "plan", "potential", "will" and similar expressions are intended to identify forward-looking statements. Such statements include, without limitation: the Company's forward-looking production guidance, including estimated ore grades, recovery rates, project timelines, drilling results, metal production, life of mine estimates, total cash costs per ounce, minesite costs per tonne, other expenses, cash flows and free cash flow; the estimated timing and conclusions of technical studies and evaluations; the methods by which ore will be extracted or processed; statements concerning the Company's ongoing construction activities at Amaruq and the Company's ramp-up activities at Meliadine, including the timing, funding, completion and commissioning thereof; statements concerning other expansion projects, recovery rates, mill throughput, optimization and projected exploration, including costs and other estimates upon which such projections are based; statements regarding timing and amounts of capital expenditures and other expenditures; estimates of future mineral reserves, mineral resources, mineral production, optimization efforts and sales; estimates of future capital expenditures and other cash needs, and expectations as to the funding thereof; the projected development of certain ore deposits, including estimates of exploration, development and production and other capital costs and estimates of the timing of such exploration, development and production or decisions with respect to such exploration, development and production; estimates of mineral reserves and mineral resources and the effect of drill results on future mineral reserves and mineral resources; statements regarding the Company's ability to obtain the necessary permits and authorizations in connection with its proposed or current exploration, development and mining operations and the anticipated timing thereof; statements regarding anticipated future exploration; the anticipated timing of events with respect to the Company's mine sites; statements regarding the sufficiency of the Company's cash resources and other statements regarding anticipated trends with respect to the Company's operations, exploration and the funding thereof; and statements regarding the outcome of discussions with First Nations groups. Such statements reflect the Company's views as at the date of this presentation and are subject to certain risks, uncertainties and assumptions, and undue reliance should not be placed on such statements. Forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by Agnico Eagle as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The material factors and assumptions used in the preparation of the forward looking statements contained herein, which may prove to be incorrect, include, but are not limited to, the assumptions set forth herein and in management's discussion and analysis ("MD&A") and the Company's Annual Information Form ("AIF") for the year ended December 31, 2018 filed with Canadian securities regulators and that are included in its Annual Report on Form 40-F for the year ended December 31, 2018 ("Form 40-F") filed with the U.S. Securities and Exchange Commission (the "SEC") as well as: that there are no significant disruptions affecting operations; that production, permitting, development and expansion at each of Agnico Eagle's properties proceeds on a basis consistent with current expectations and plans; that the relevant metal prices, foreign exchange rates and prices for key mining and construction supplies will be consistent with Agnico Eagle's expectations; that Agnico Eagle's current estimates of mineral reserves, mineral resources, mineral grades and metal recovery are accurate; that there are no material delays in the timing for completion and commissioning of ongoing growth projects; seismic activity at the Company's operations at LaRonde is as expected by the Company; that the Company's current plans to optimize production are successful; and that there are no material variations in the current tax and regulatory environment. Many factors, known and unknown, could cause the actual results to be materially different from those expressed or implied by such forward looking statements. Such risks include, but are not limited to: the volatility of prices of gold and other metals; uncertainty of mineral reserves, mineral resources, mineral grades and mineral recovery estimates; uncertainty of future production, project development, capital expenditures and other costs; foreign exchange rate fluctuations; financing of additional capital requirements; cost of exploration and development programs; seismic activity at the Company's operations, including the LaRonde mine; mining risks; community protests, including by First Nations groups; risks associated with foreign operations; the unfavorable outcome of litigation involving the Canadian Malartic General Partnership; governmental and environmental regulation; the volatility of the Company's stock price; and risks associated with the Company's currency, fuel and by-product metal derivative strategies. For a more detailed discussion of such risks and other factors that may affect the Company's ability to achieve the expectations set forth in the forward-looking statements contained in this presentation, see the AIF and MD&A filed on SEDAR at www.sedar.com and included in the Form 40-F filed on EDGAR at www.sec.gov, as well as the Company's other filings with the Canadian securities regulators and the SEC. Other than as required by law, the Company does not intend, and does not assume any obligation, to update these forward-looking statements.

Currency

All amounts in this presentation are expressed in U.S. dollars except as otherwise noted.

Further Information

For further details on Agnico Eagle's second quarter 2019 results, please see the Company's news release dated July 24, 2019.

Notes to Investors

Note Regarding the Use of Non-GAAP Financial Measures

This presentation discloses certain measures, including "total cash costs per ounce" that are not standardized measures under IFRS. These data may not be comparable to data reported by other issuers. For a reconciliation of these measures to the most directly comparable financial information reported in the consolidated financial statements prepared in accordance with IFRS and for an explanation of how management uses these measures, see "Non-GAAP Financial Performance Measures" in the MD&A filed on SEDAR at www.sedar.com and included in the Form 6-K filed on EDGAR at www.sec.gov, as well as the Company's other filings with the Canadian securities regulators and the SEC.

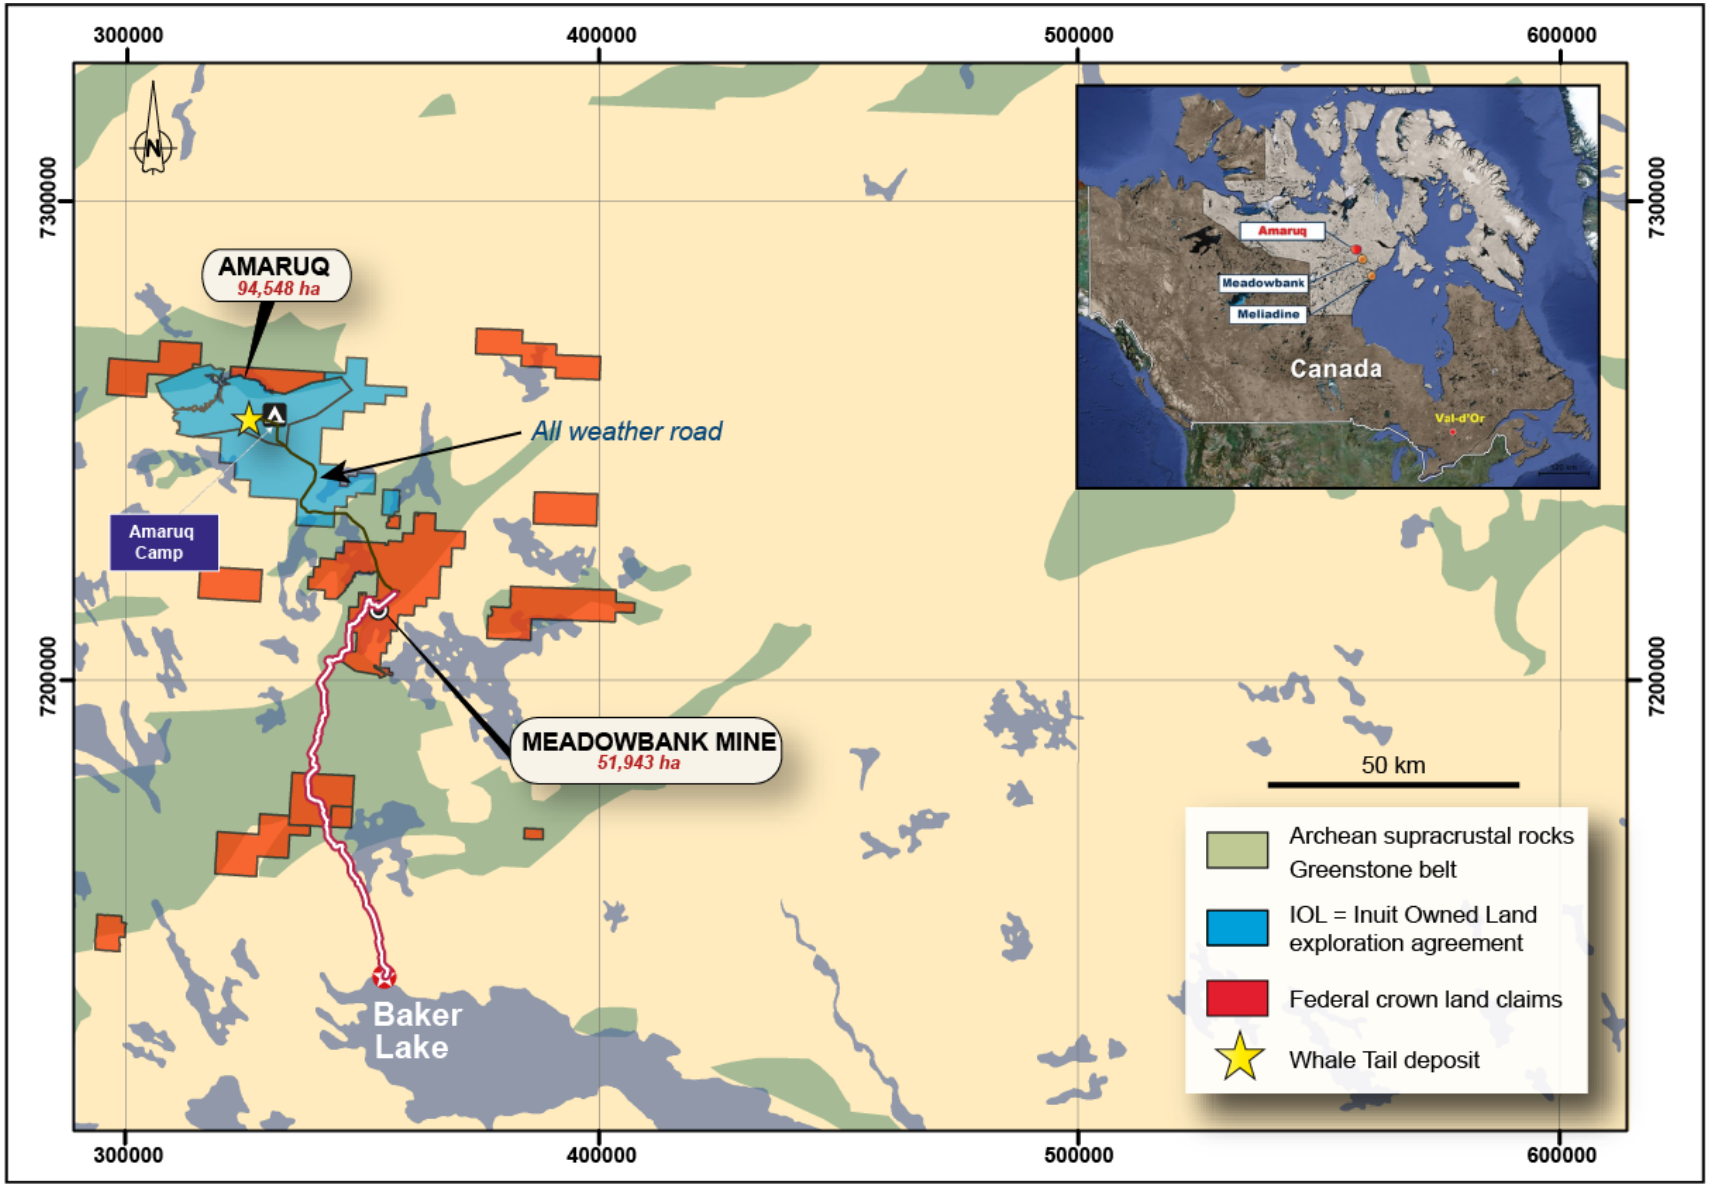

The total cash costs per ounce of gold produced is reported on both a by-product basis (deducting by-product metal revenues from production costs) and co-product basis (without deducting by-product metal revenues). Unless otherwise specified total cash costs per ounce of gold produced is reported on a by-product basis in this presentation. The total cash costs per ounce of gold produced on a by-product basis is calculated by adjusting production costs as recorded in the consolidated statements of income for by-product revenues, unsold concentrate inventory production costs, smelting, refining and marketing charges and other adjustments, and then dividing by the number of ounces of gold produced. The total cash costs per ounce of gold produced on a co-product basis is calculated in the same manner as the total cash costs per ounce of gold produced on a by-product basis except that no adjustment is made for by-product metal revenues. Accordingly, the calculation of total cash costs per ounce of gold produced on a co-product basis does not reflect a reduction in production costs or smelting, refining and marketing charges associated with the production and sale of by-product metals. The total cash costs per ounce of gold produced is intended to provide information about the cash-generating capabilities of the Company's mining operations. Management also uses these measures to monitor the performance of the Company's mining operations. As market prices for gold are quoted on a per ounce basis, using the total cash costs per ounce of gold produced on a by-product basis measure allows management to assess a mine's cash-generating capabilities at various gold prices.

Note Regarding Production Guidance

The gold production guidance is based on the Company's mineral reserves but includes contingencies and assumes metal prices and foreign exchange rates that are different from those used in the mineral reserve estimates. These factors and others mean that the gold production guidance presented in this presentation does not reconcile exactly with the production models used to support these mineral reserves.

The Company's production guidance at Meliadine is based, in part, on the results of preliminary economic assessments. These preliminary economic assessments include inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the production guidance set out in this presentation will be realized. The preliminary economic assessment used in respect of the Meliadine mine project included 3.6 million contained ounces of inferred mineral resource, 3.3 million contained ounces of measured and indicated mineral resource and 3.4 million contained ounces of proven and probable mineral reserve. For further information on the Company's production guidance at Meliadine, including the qualifications and assumptions made in connection with the preparation of the assessments, please see the Company's press release dated February 14, 2019 and the Company's AIF, as well as the Company's other filings with the Canadian securities regulators and the SEC.

Amaruq Project – Location Map

History of the Amaruq Project

Six Years from Discovery to Production

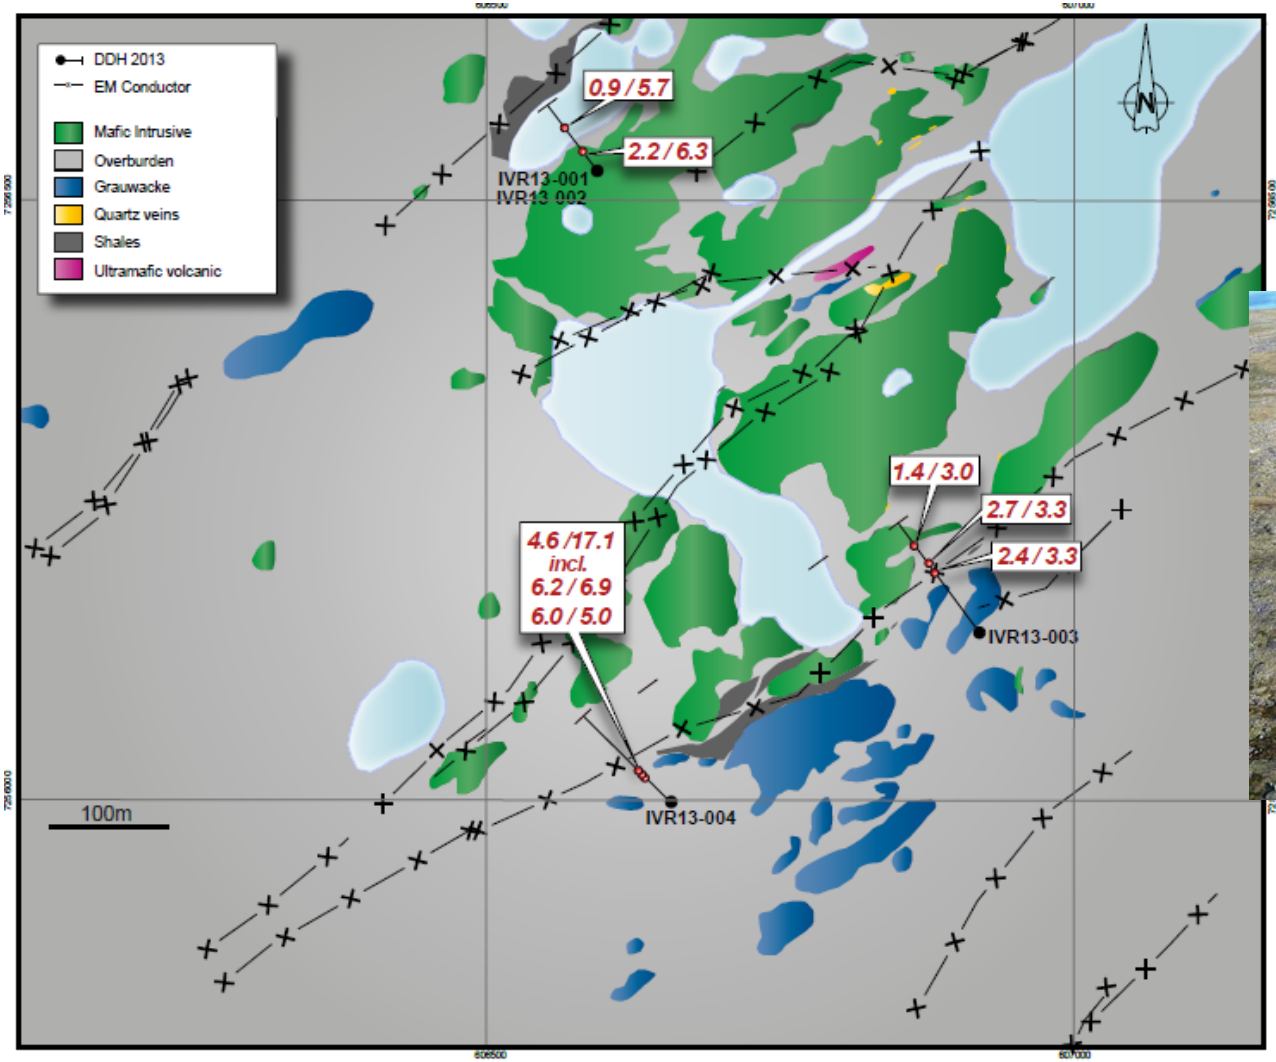

- **1989 – 1991**: Initial exploration by Asmera Minerals (gold values up to 21 g/t gold)
- **April 2013**: Signing of the Mineral Exploration Agreement with NTI for initial 9,330 ha at IVR
- **August 2013**: First drilling campaign at IVR
- **2014**: Discovery of the Whale Tail deposit
- **December 2014**: Initial mineral resource
- **Q1 2016**: Start of road construction to Amaruq
- **February 2017**: AEM board approves satellite deposit development
- **December 2017**: Initial mineral reserve
- **January 2018**: UG exploration ramp starts
- **July 2018**: Receipt of final permits to allow for development of Phase 1 mining activities
- **Summer 2018**: Constructions activities begin
- **Q3 2019**: Expected commercial production

Amaruq Project

First Drilling Campaign August 2013 - $250,000 Initial Budget

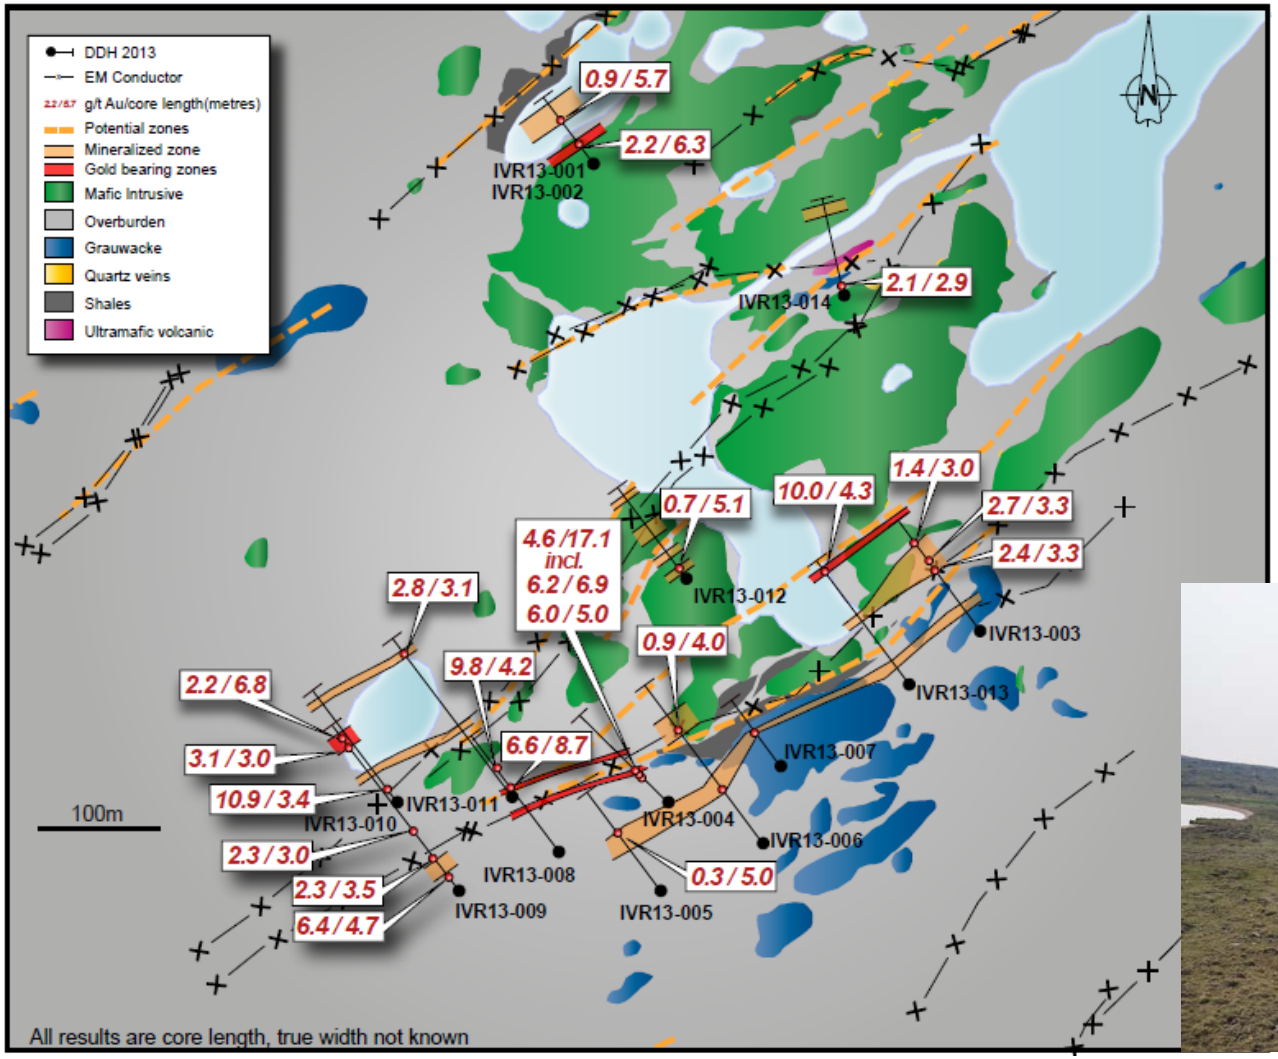

4 DDH for 573 m

Amaruq Project

Phase 2 (September - October 2013) - $600,000 Follow-up Budget

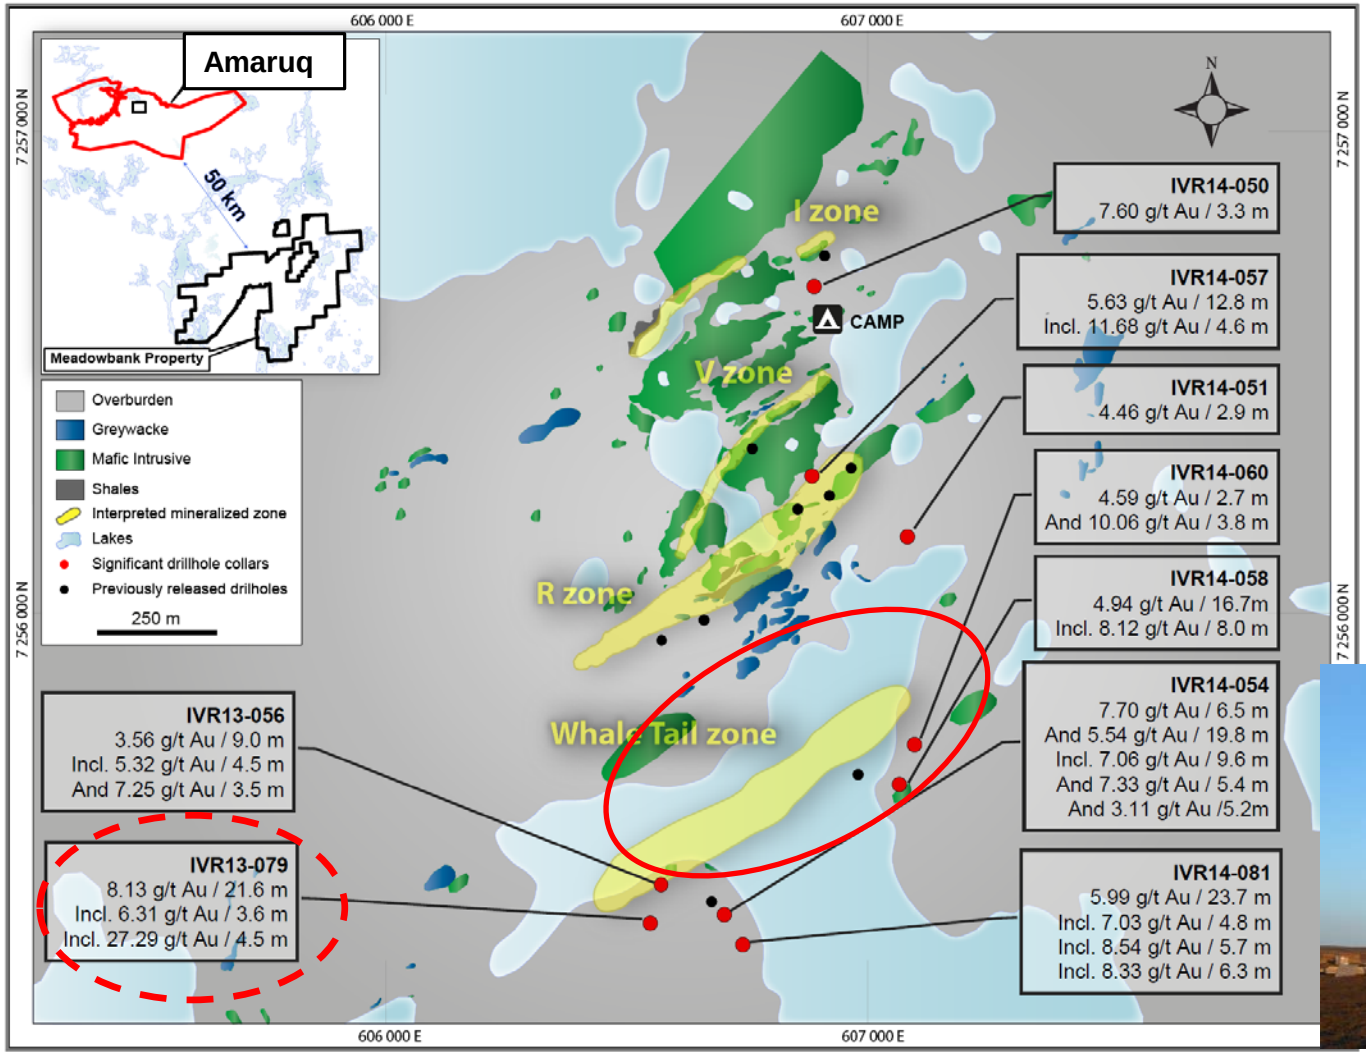

10 DDH for 1,759 m

Amaruq Project

2014 Drill Program Led to the Discovery of the Whale Tail Deposit

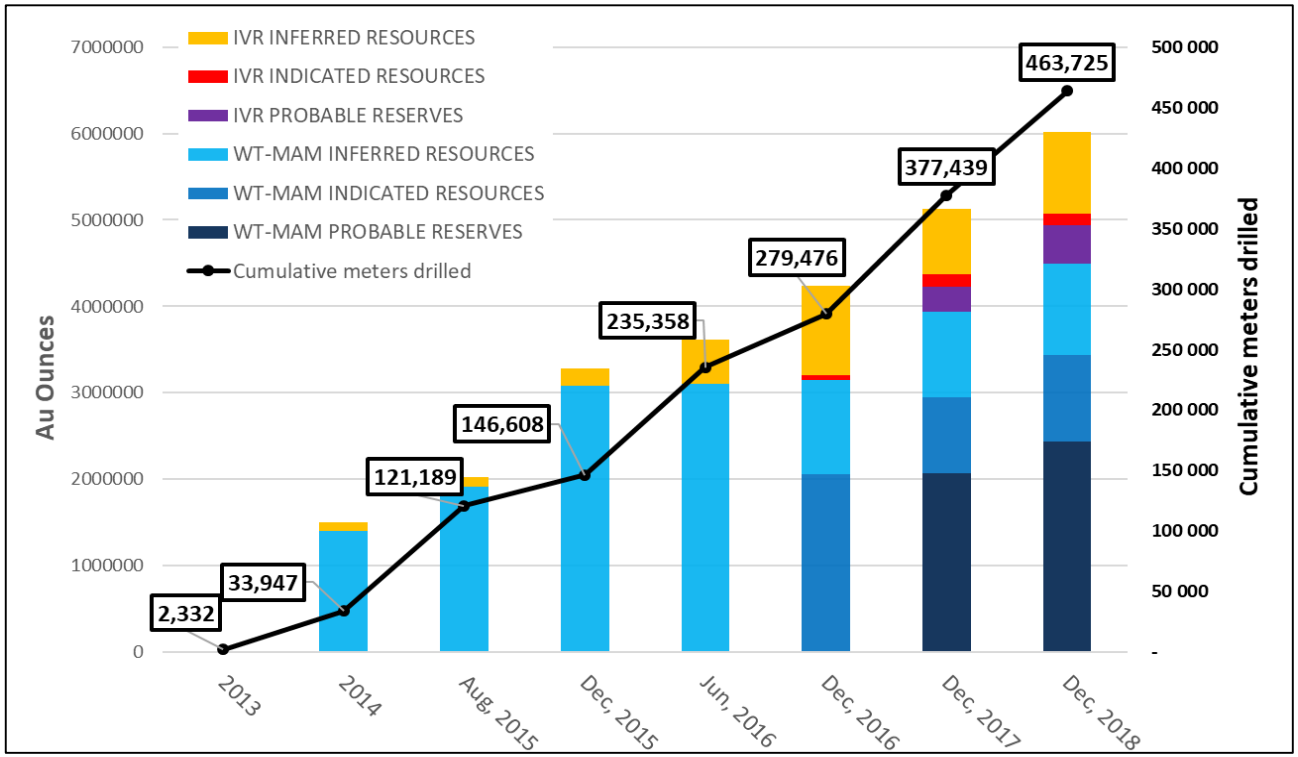

2014:
158 DDH for 33,946 m

Grades capped at 60 g/t / over the estimated true width

Amaruq Project– Mineral Reserve and Mineral Resources

A Rapid Evolution From Acquisition to + 6 Moz Au (all categories)

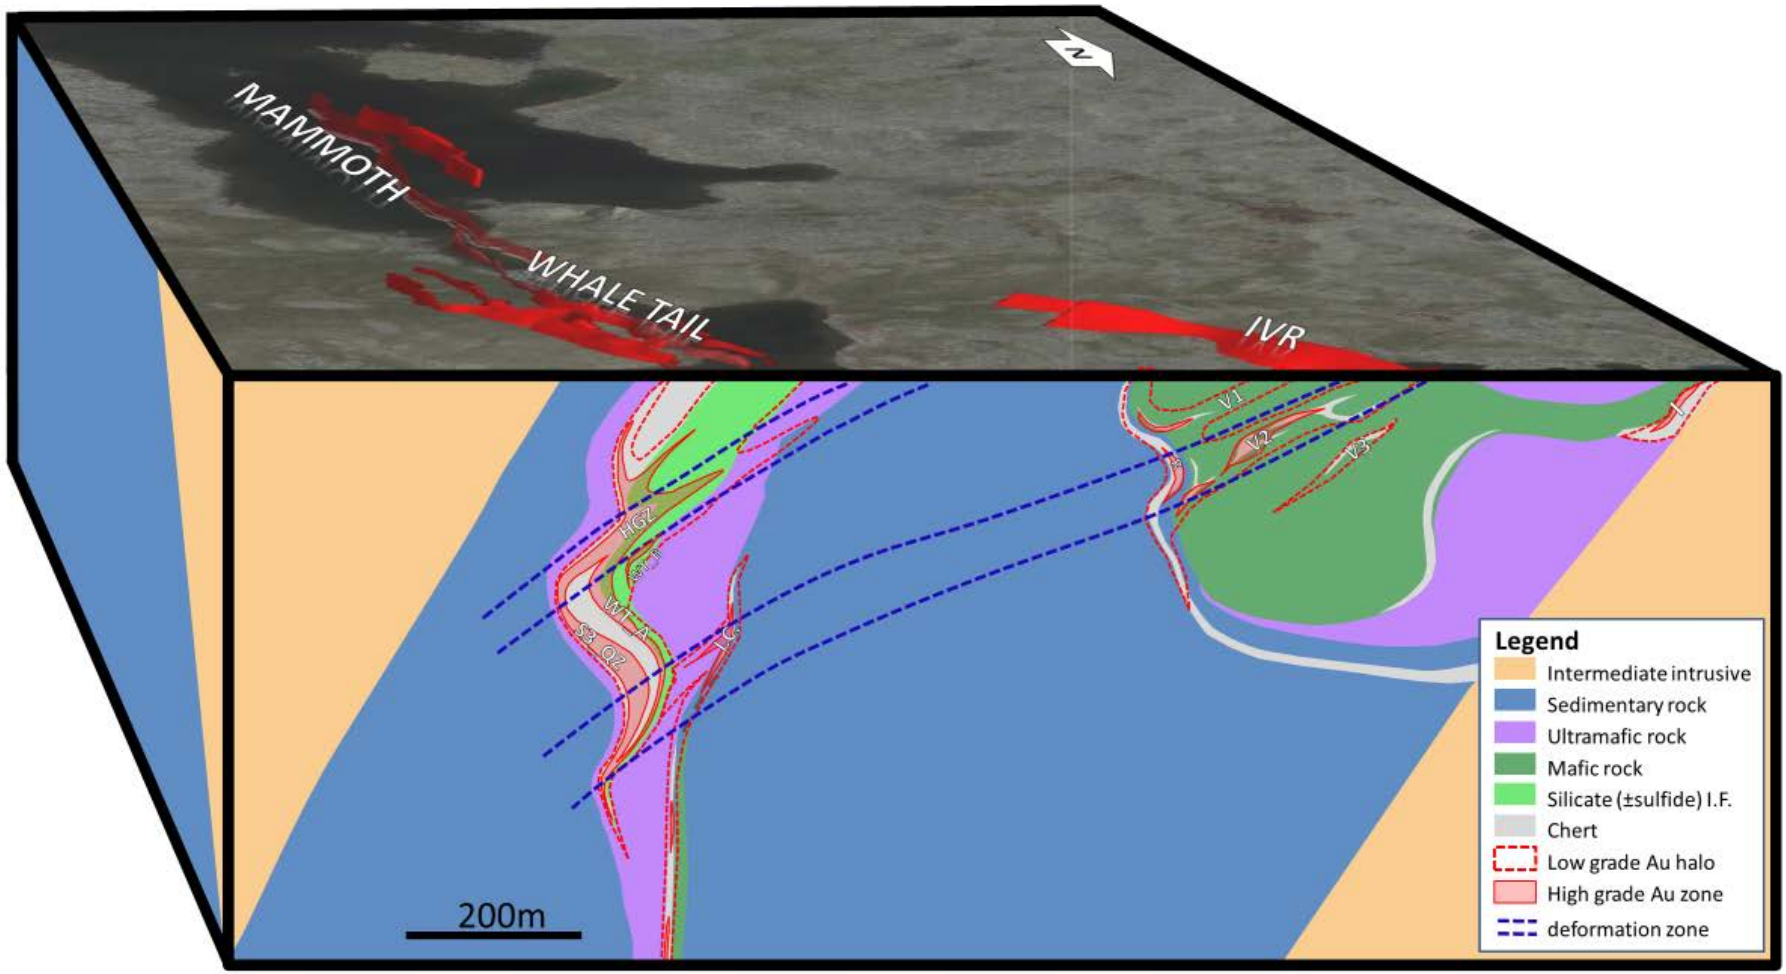

Average discovery cost per ounce ~$24

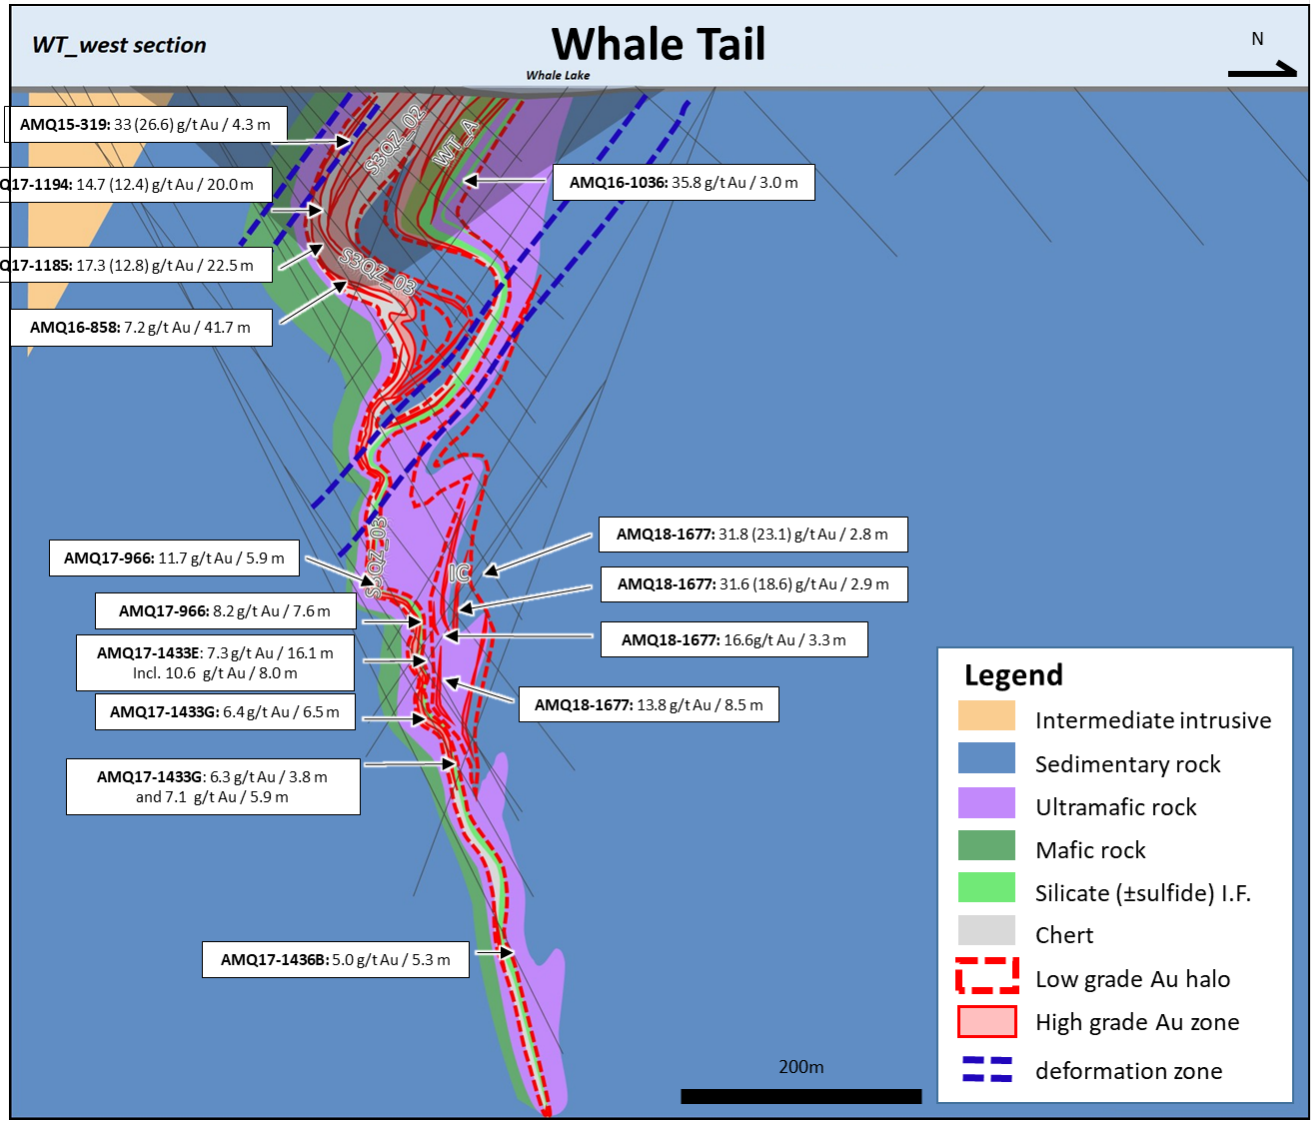

Mineral Reserve & Mineral Resource Data (as at December 31, 2018)	Tonnage (000's tonnes)	Au Grade (g/t)	Au (000's oz)
Proven & Probable mineral reserves			
Open pit	24,941	3.59	2,882
Indicated mineral resources			
Open pit	4,247	3.34	455
Underground	4,618	4.56	676
Total indicated mineral resources	8,865	3.97	1,132
Inferred mineral resources			
Open pit	899	4.20	121
Underground	11,675	5.19	1,948
Total inferred mineral resources	12,573	5.12	2,069

Detailed information on mineral reserves and mineral resources can be found in the February 15, 2019 news release

Amaruq Project – Geology and Mineralization

Amaruq Project – Geology & Mineralization at Whale Tail

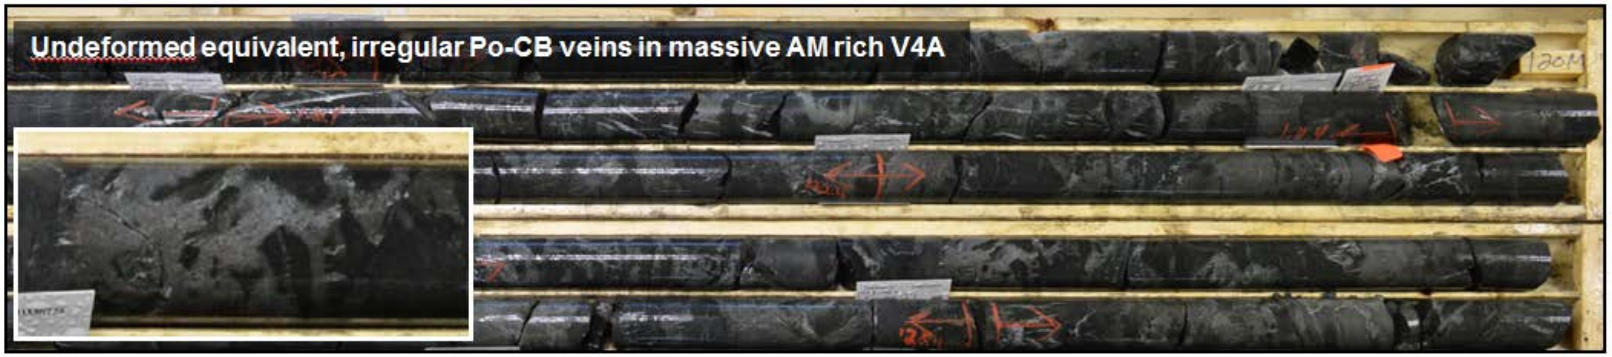

Associated with:

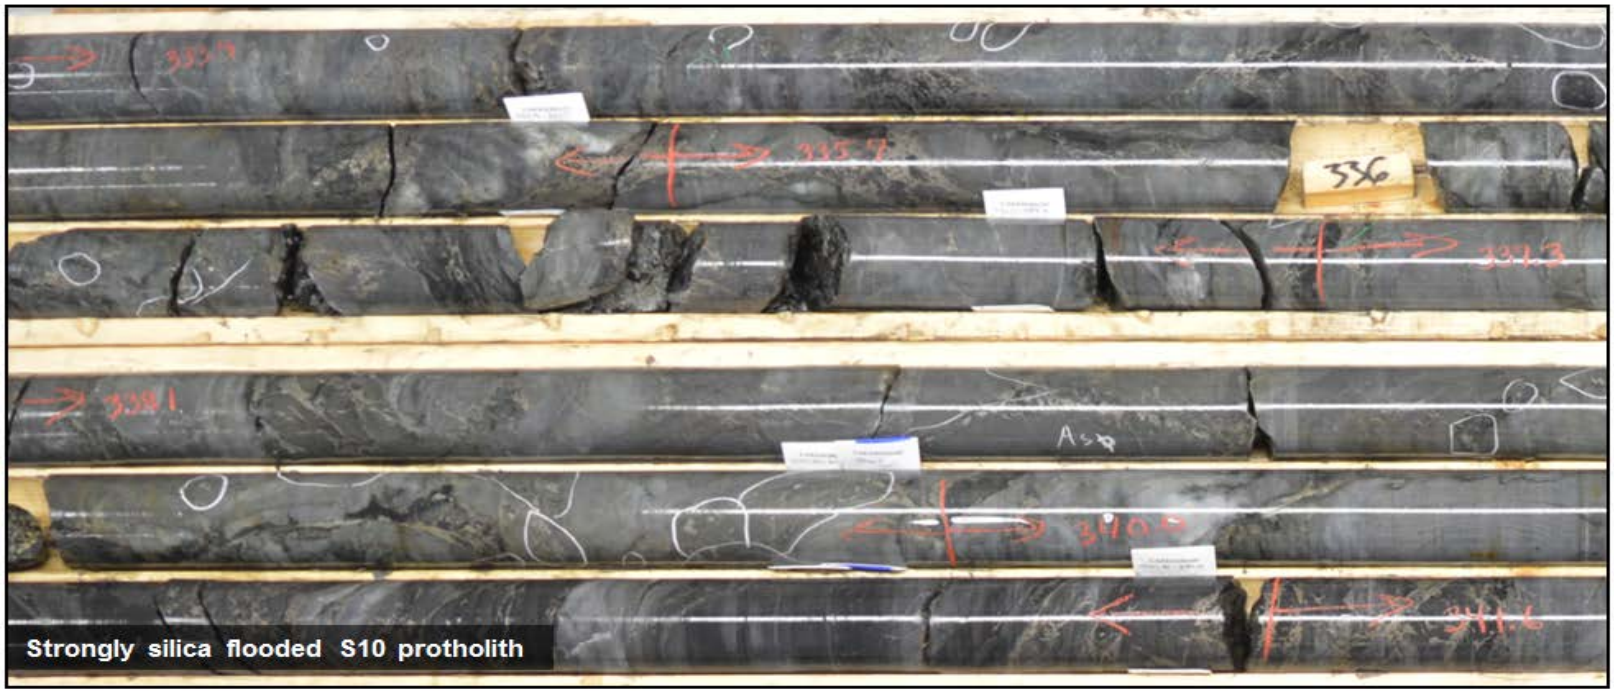

- carbonate-pyrrhotite replacement
- and/or quartz-arsenopyrite-pyrrhotite-pyrite flooding

Geology and Mineralization at Whale Tail

Associated with:

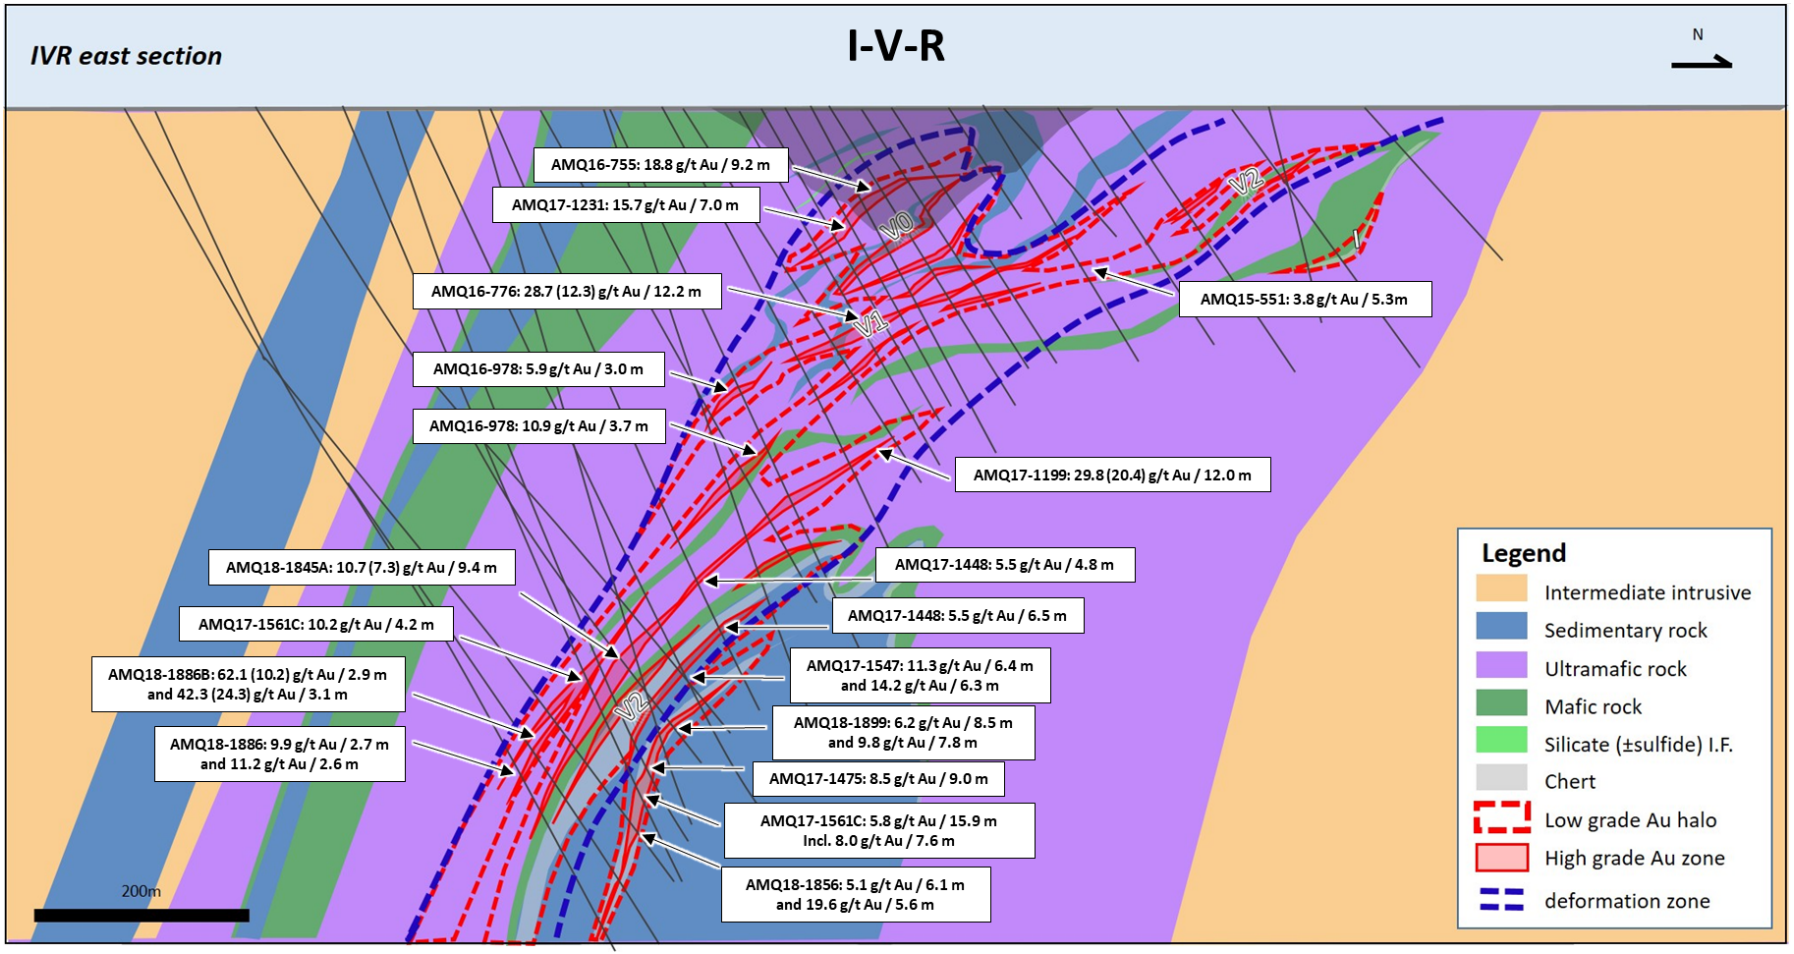

- carbonate-pyrrhotite replacement
- and/or quartz-arsenopyrite-pyrrhotite-pyrite flooding

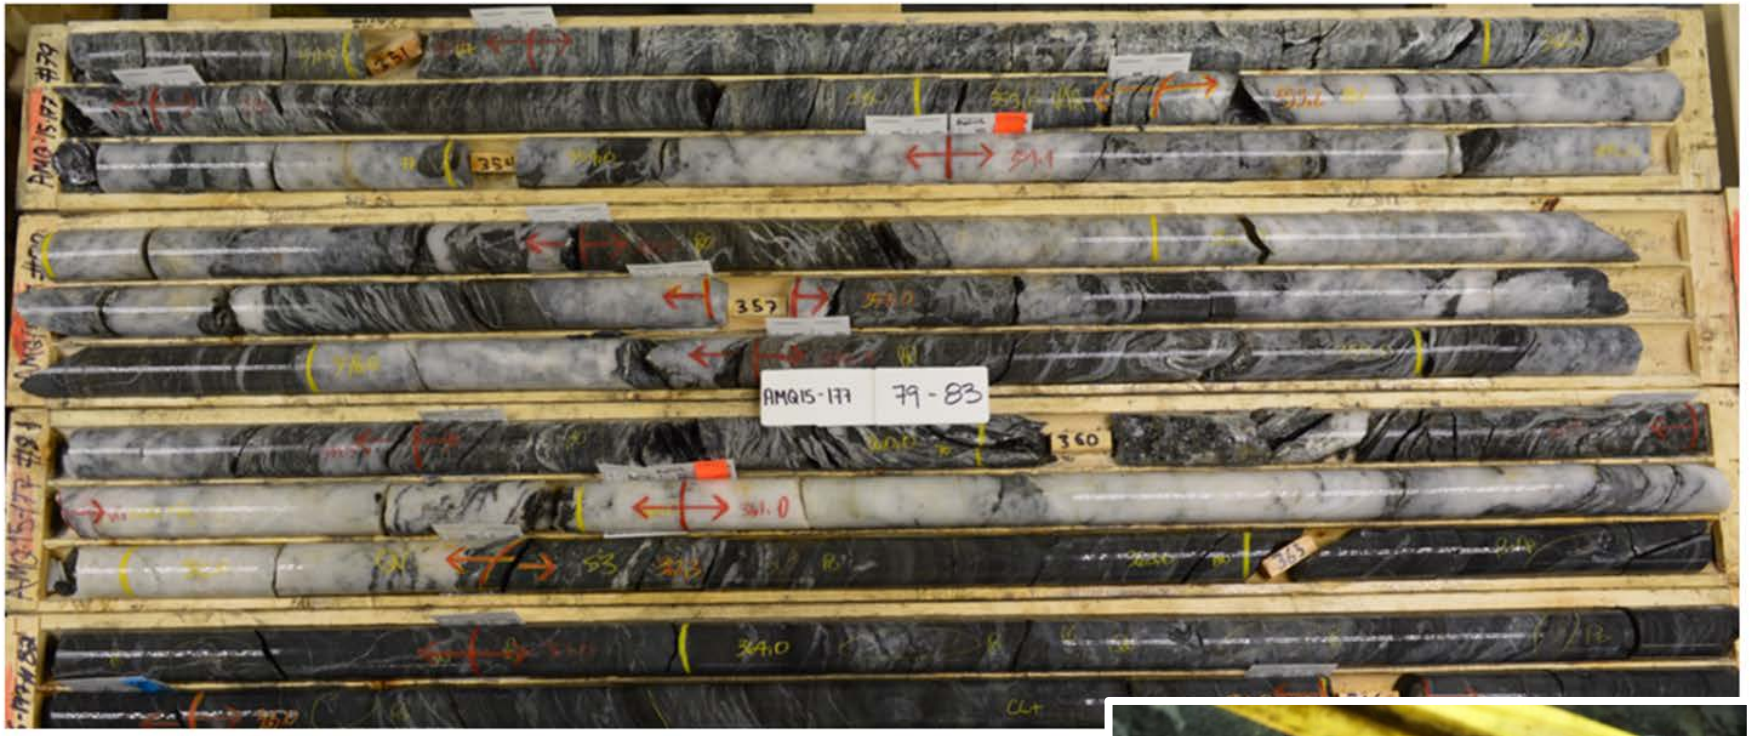

Geology and Mineralization at V Zone

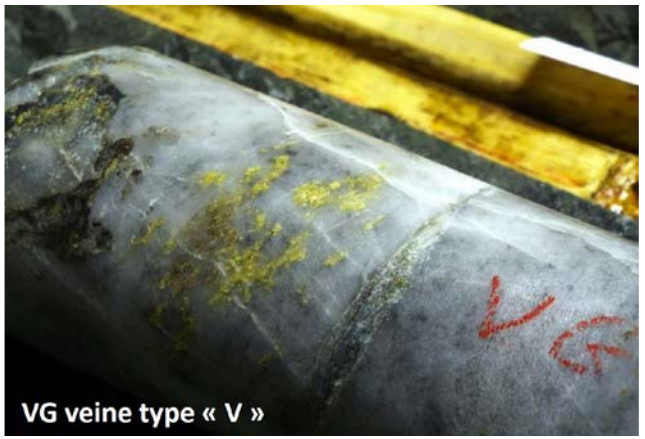

- Quartz-arsenopyrite-galena-sphalerite-chalcopyrite veining with free gold

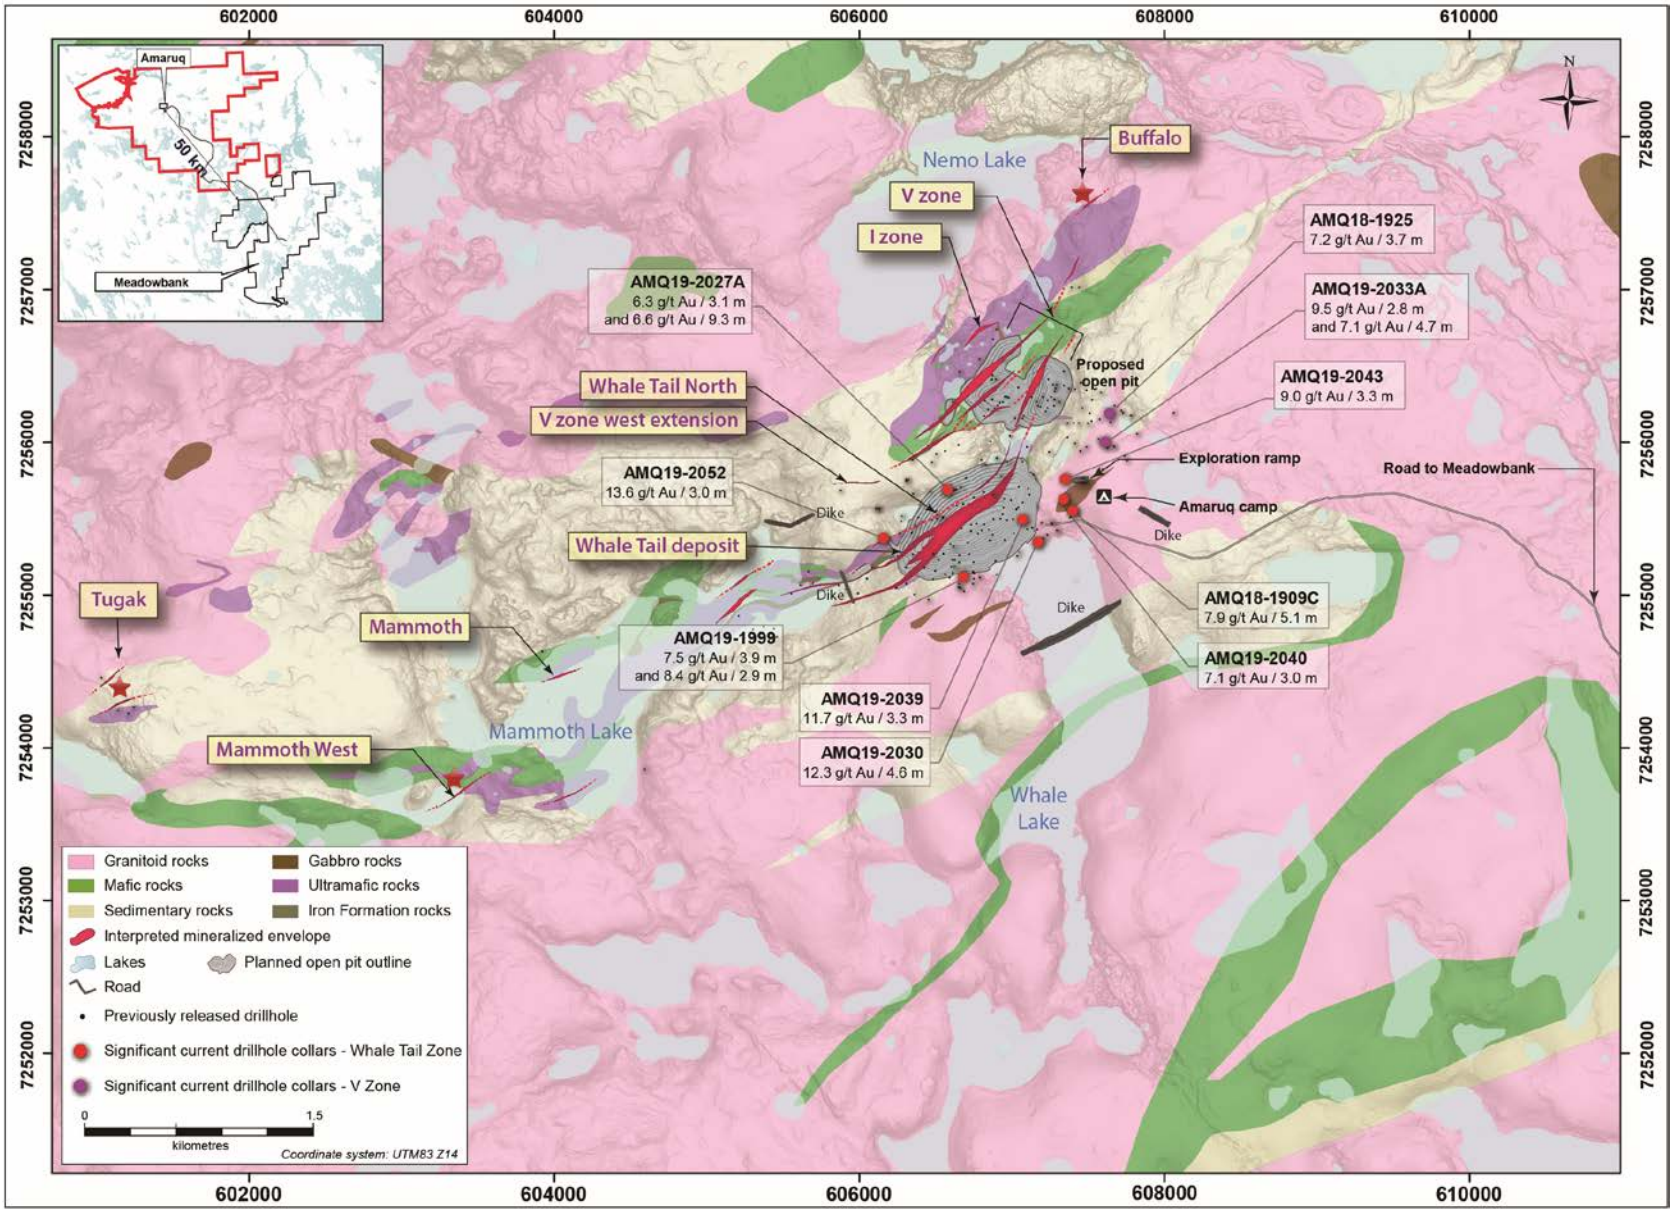

Geology and Mineralization at V Zone

- Quartz-arsenopyrite-galena-sphalerite-chalcopyrite veining with free gold

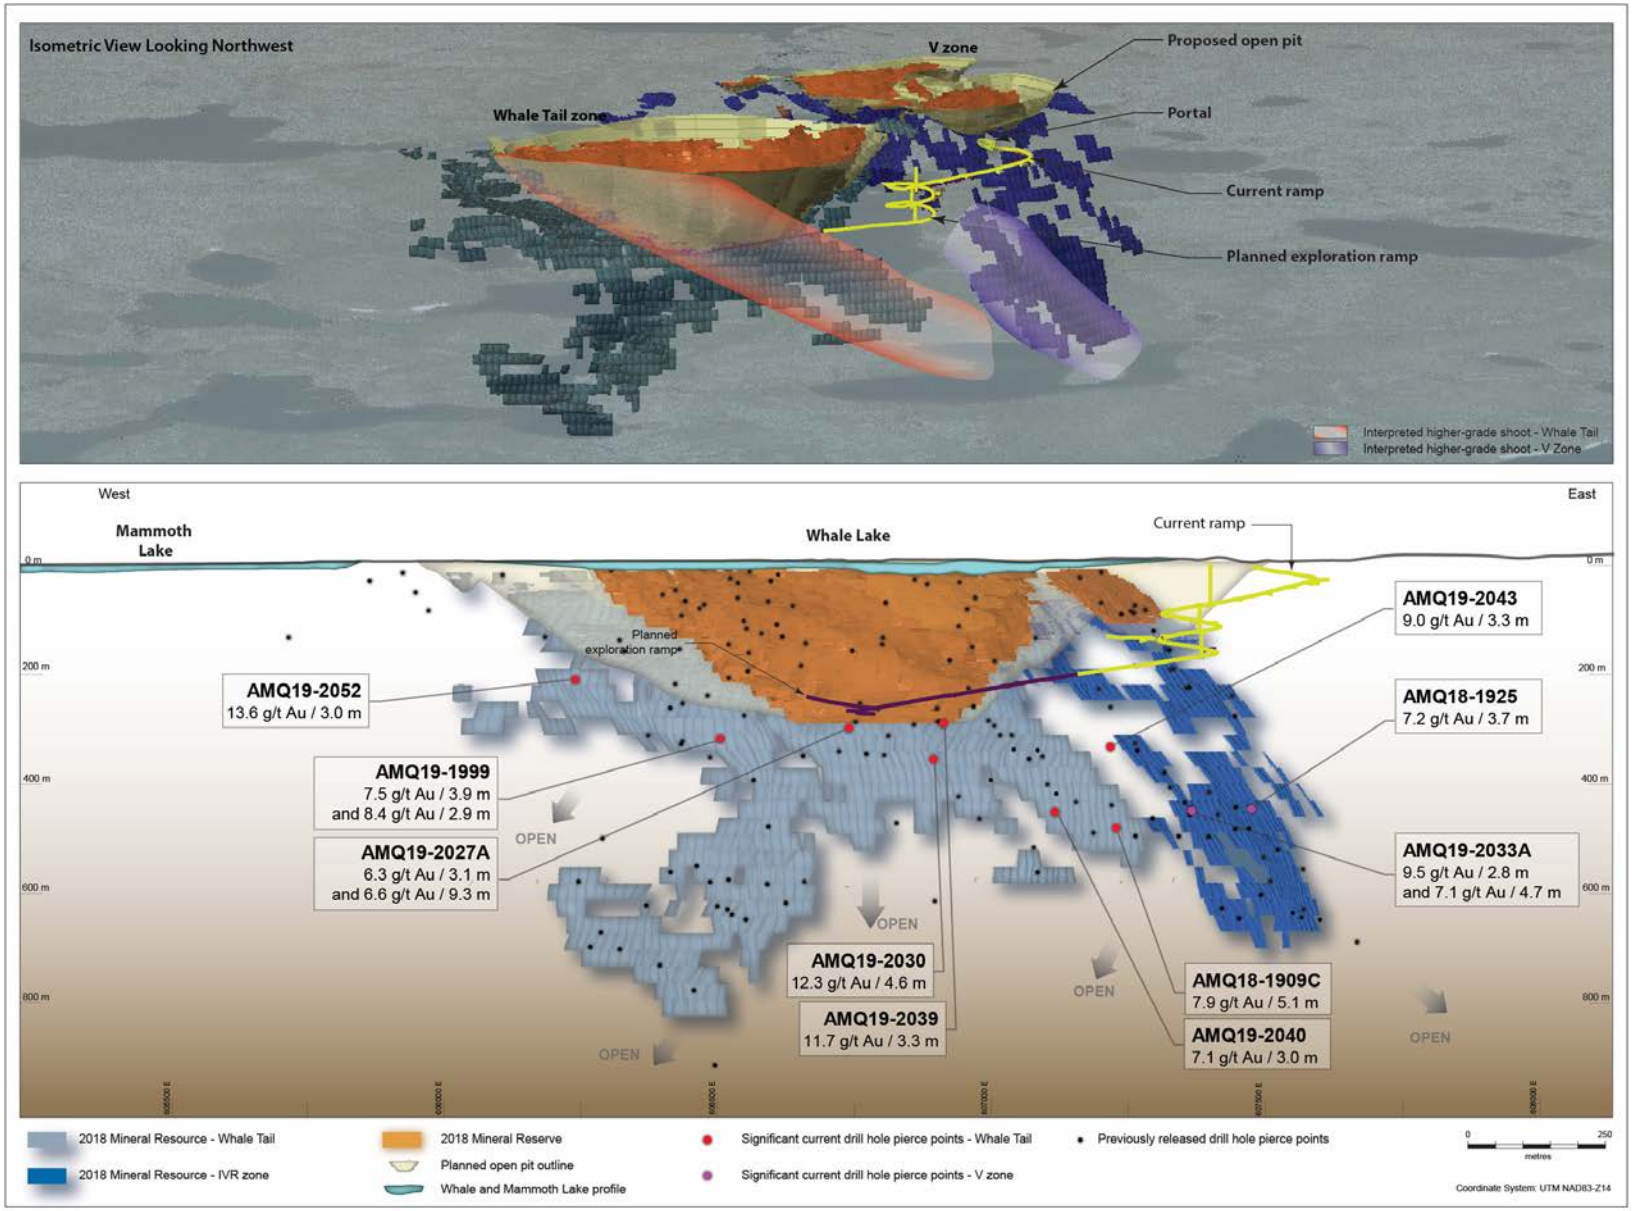

Amaruq Project – Local Geology Map July 2019

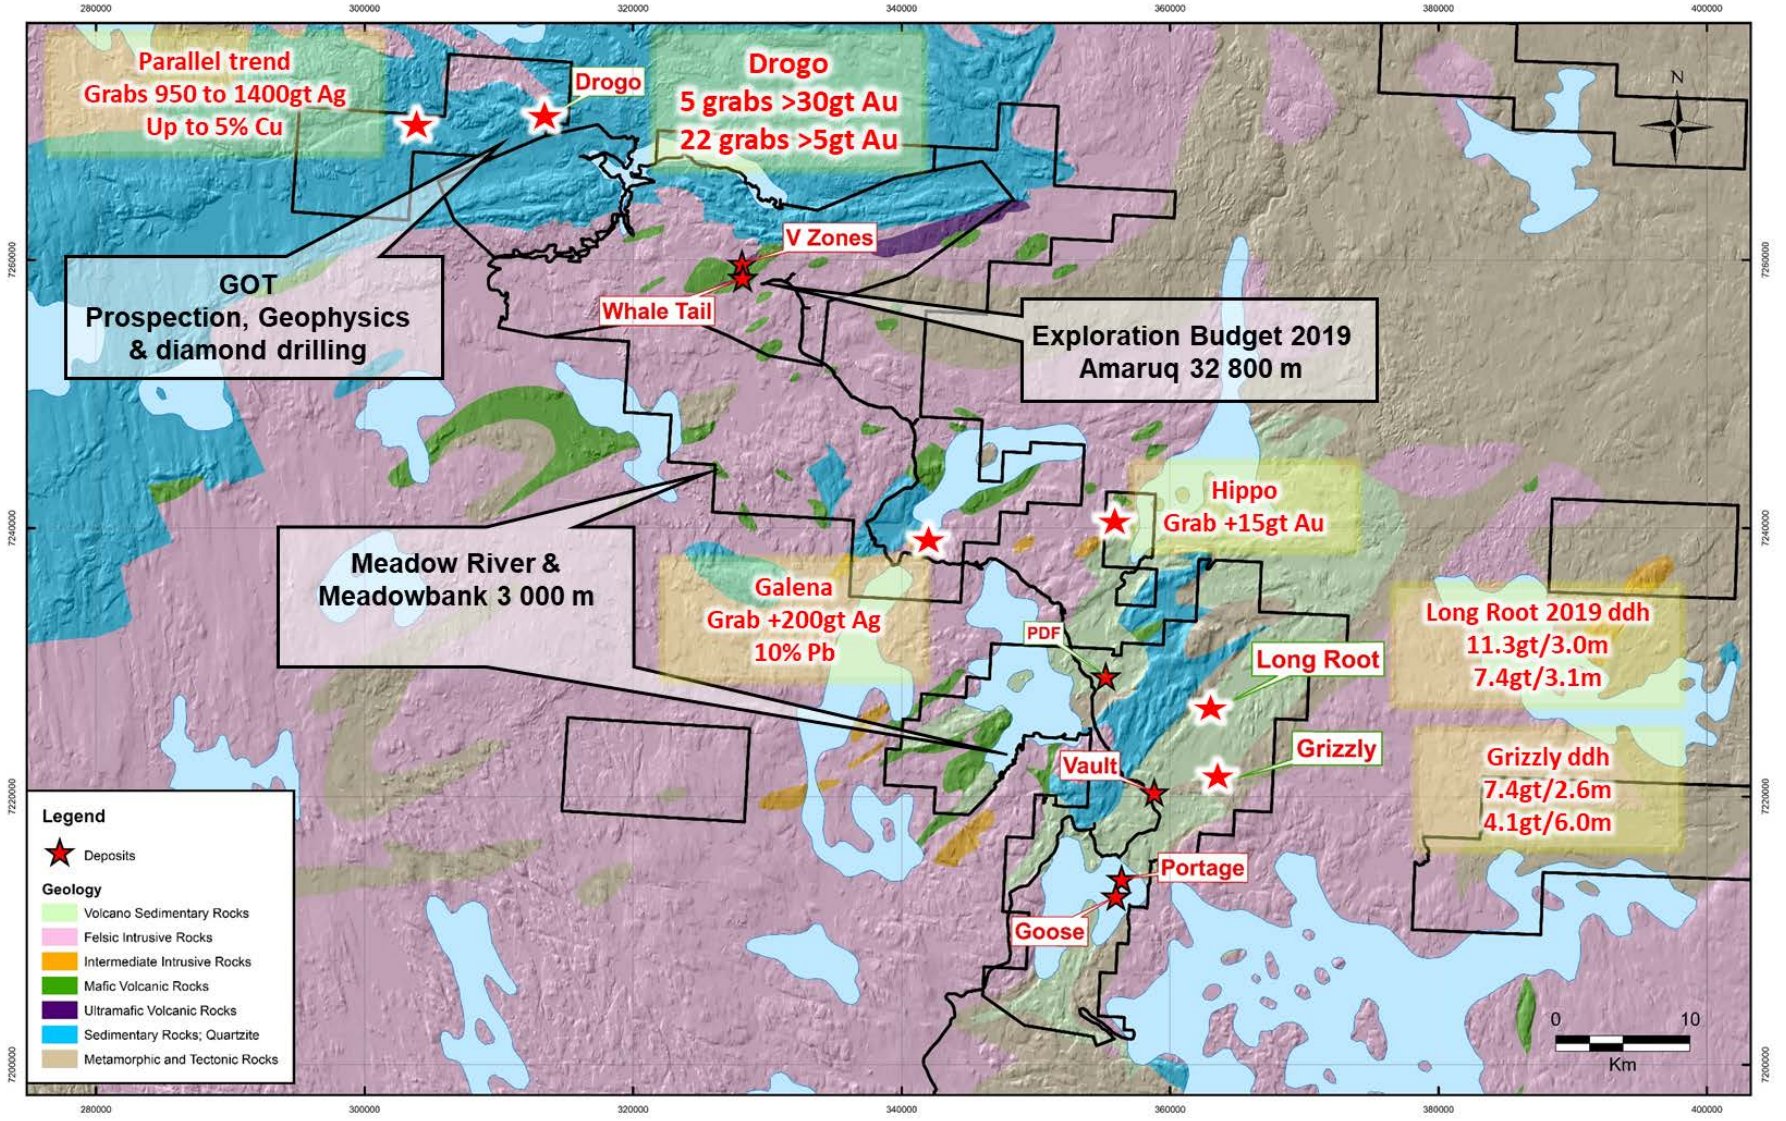

Amaruq Project – Composite Longitudinal Section July 2019

Amaruq Project

Regional Prospecting – Rock Sampling Outlines Several Additional Targets

AGNICO EAGLE

OPERATIONS

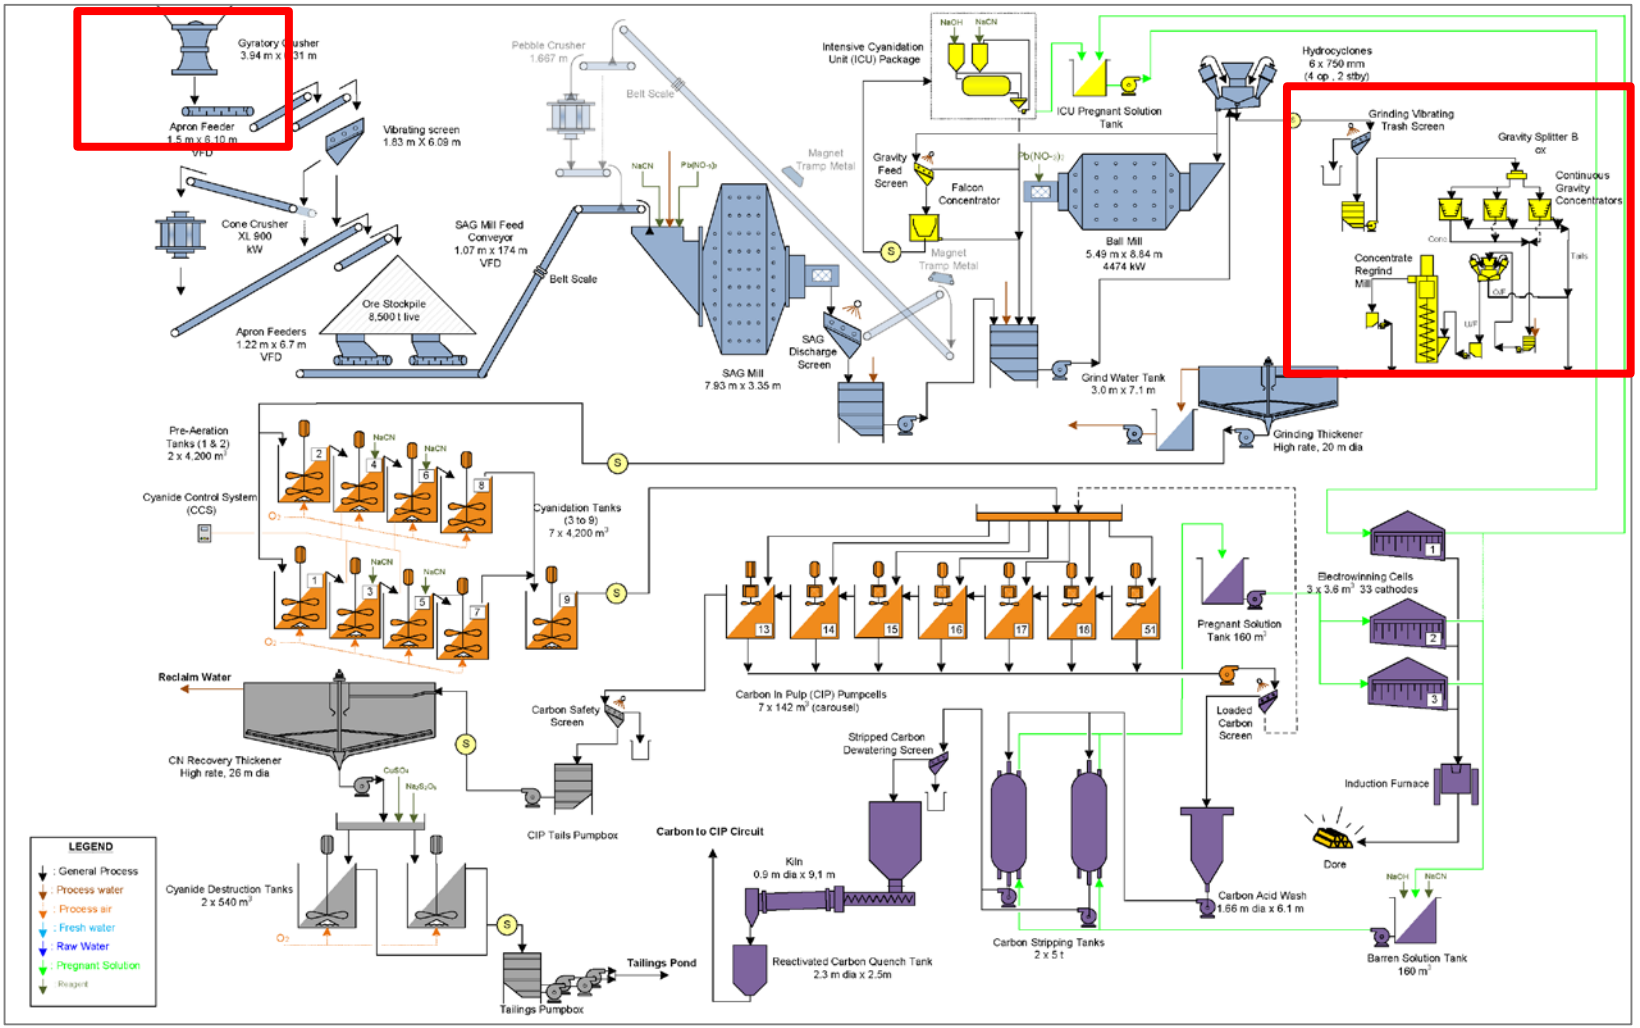

2019 Infrastructure Related Activities

- Meadowbank mill modifications completed Q1 (now fully functional). Planned milling rate 9,000 tpd
- Commissioning of water treatment plant in Q2
- Main garage opened in early July
- Meadowbank in-pit tailings deposition started early July
- Fuel tank completed early August
- Earthwork diversion channels to be completed in Q4
- Camp mostly complete, some elements are planned to be completed in Q4
- Warehouse to be completed in Q4

Modifications to Mill for Amaruq Ore

- Primary crusher modification to dump long haul truck
- Crushing circuit liner profile changes to optimize wear and energy distribution
- Continuous gravity separation circuit (Knelson Concentrators)
- Regrind with a HIG mill (40um) to liberate a gold portion
- Expected impact 2%-3% gain on recovery

Amaruq Ore Bulk Mill Test – June 2019

- 39k tonnes of 1.83 g/t gold were processed (~2koz of pre-commercial production)
- Recovery was as expected at 93%
- All mill equipment is functioning as planned
- Amaruq ore processing started the week of August 4th
- During the first month of processing Amaruq ore, the focus will be on monitoring the wear on mill components

In-Pit Tailings Deposition at Meadowbank

- In-pit deposition of tailings in the Goose pit commenced on July 5, 2019
- Tailings deposition in the Goose pit will continue through 2020. Tailings will then be deposited into the Portage pit
- In-pit tailings disposal is expected result in lower sustaining capital over the life of mine and defer closure costs

Mine Ramp Up Continues

In Q2 40,000 tpd moved from all benches:

- Fewer working faces available in Whale Tail pit due to additional rainfall and delayed commissioning of water treatment plant
- Dewatering of Whale Tail pit expected to be completed by mid-September

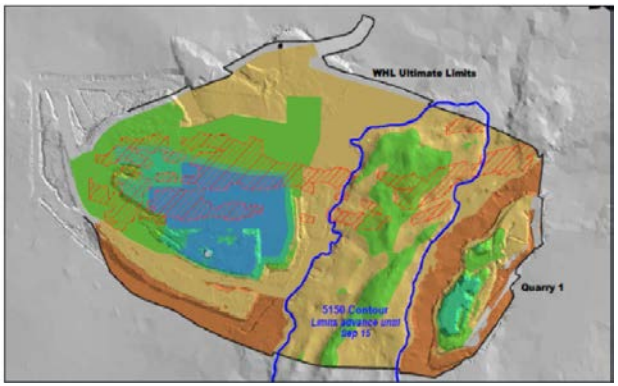

Production fleet ramping back up after completion of the main garage in July (improved equipment availability – 5 haul trucks, 2 production shovels):

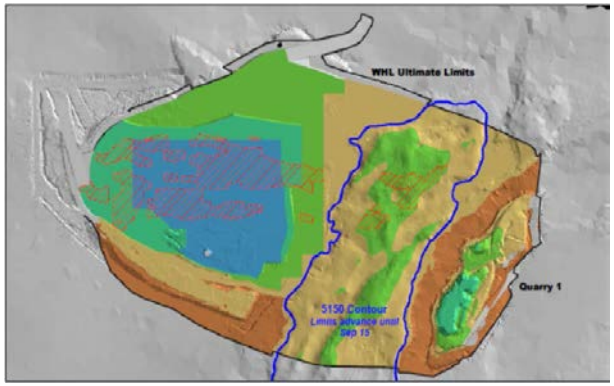

- Q3 planned ramp up to 70,000 tpd
- Q4 planned 90,000 to 100,000 tpd mining rate carried into 2020 (ore and waste)

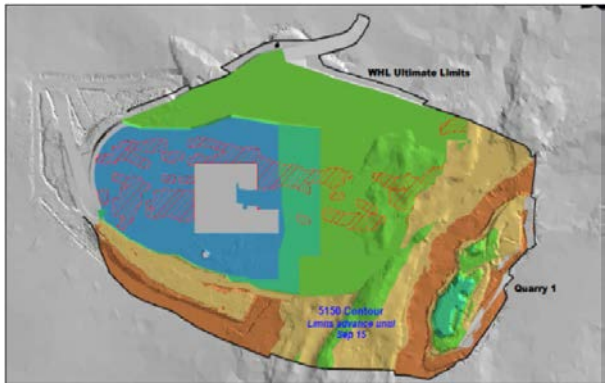

Amaruq stockpile level – end of Q2/19

- 293,000 tonnes at 3.5 g/t gold (does not include any low-grade material)

June → **September**

Long-Haul Trucks (LHT) Ramp Up

Q2/19 Fleet – seven trucks

- Continuing to improve availability of LHT fleet (scheduling, training & maintenance)
- Q2/19 hauling impacted by longer than expected Cariboo migration. Agnico is working to find solutions to safeguard wildlife & minimize production disruptions
- Road improvements ongoing for full fleet deployment

H2 2019 Fleet

- 11 trucks delivered to site in early Q3/19
- 5 trucks expected to arrive in late August
- Full fleet expected to be in operation early September

Additional truck capacity when three contractor units arrive on site late September

Current truck haulage ~2 trips/12-hr shift
LHT capacity 150 tonnes per truck

Gradual haulage ramp up into Q4/19

- Q2/19 – 2200 tpd
- Q3/19 – 5000 to 7000 tpd
- Q4/19 – 7000 to 9000 tpd

Amaruq Guidance – 2019 to 2021

	2019E	2020E	2021E
Production	130,000	272,500	351,000
Minesite cost per tonne C$ (LOM)	$110-$120		
Total cash costs per ounce $ (LOM)	$800-$830		
Sustaining capital costs $ (LOM)	~$25 million per year		
Mine life	7 years		

- 2019 production guidance for the Meadowbank complex: ~230,000 oz

Phase 2 Permitting

- Phase 2 permit will allow for the extension of the Whale Tail pit and development of the V Zone and the underground
- Final Information Request responses to Nunavut Water Board (NWB) for the amended water license was submitted on August 2nd
- Final responses submitted to Nunavut Impact Review Board (NIRB) on August 9th
- NIRB Public Hearing scheduled for August 26-29th in Baker Lake
- Amaruq Phase 2 permitting is expected to be completed in late 2020

Underground Project – Milestones

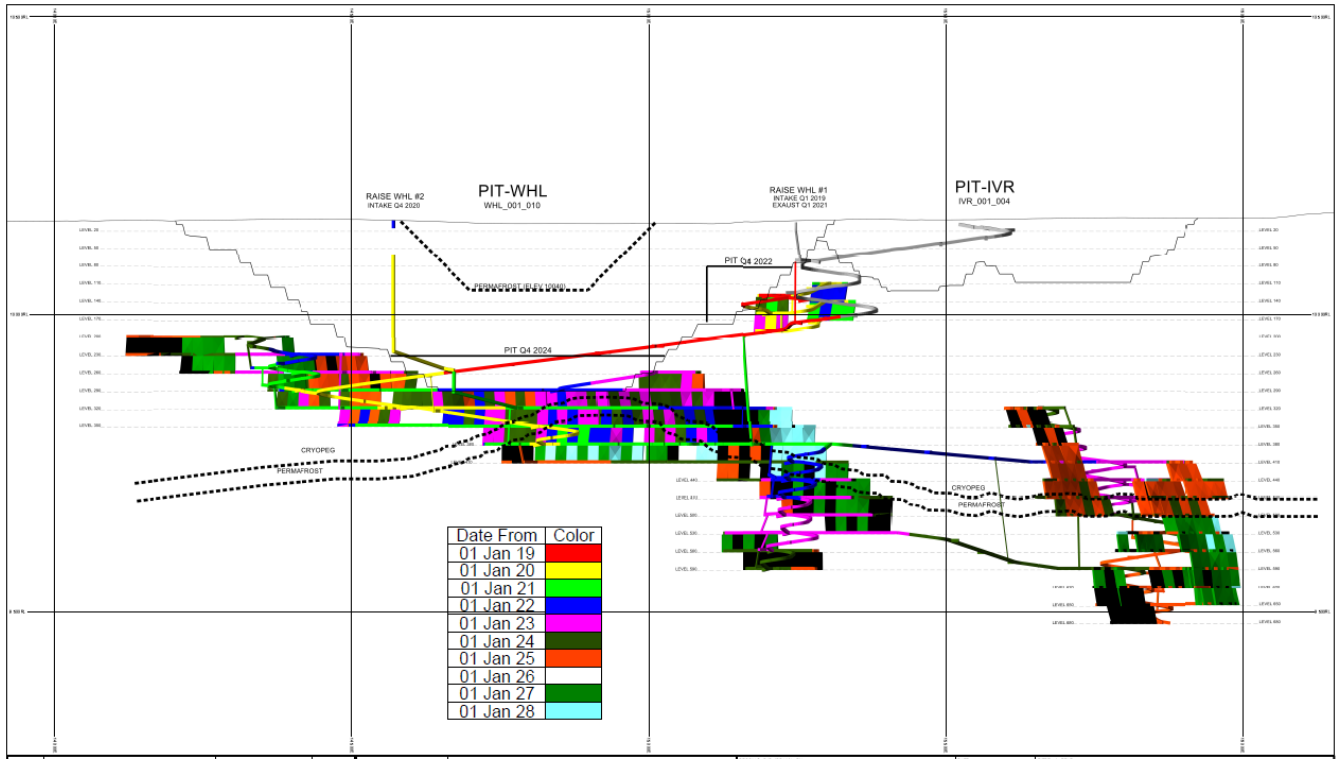

Higher Grades from Underground Could Offset Lower Grade Open Pit Ore & Extend Mine Life

- Q4 2016: Decision to go ahead with an exploration ramp
- Sea-lift 2017: Delivery of the first UG mining equipment and material for ramp start-up
- September 2017:
  - Exploration road reached Amaruq site
  - Surface equipment mobilized to start site preparation
- Q4 2017:
  - Excavation of portal completed
  - In December, the first round of the ramp was blasted
- 2018: Over 1,200 meters of underground development completed

Underground Project – 2019

- At the end of July, 955 meters were completed, ahead of the original plan (full year target of 1,400 meters)
- Surface drilling campaign underway to convert some of the current inferred mineral resource to indicated mineral resource
- First underground diamond drill started conversion drilling in July
- Focus of conversion drilling is to help determine feasibility of first mining areas
- Based on exploration success, an additional $21M in capital has been approved for H2/19
- The accelerated development program could help facilitate potential underground production in 2022
- Additional details on the underground project are expected in February, 2020

Mineral reserves are not a subset of mineral resources. Tonnage amounts and contained metal amounts presented in this table have been rounded to the nearest thousand, so aggregate amounts may differ from column totals.

Notes to Investors Regarding The Use of Mineral Resources

Cautionary Note to Investors Concerning Estimates of Measured and Indicated Mineral Resources

This presentation uses the terms "measured mineral resources" and "indicated mineral resources". Investors are advised that while those terms are recognized and required by Canadian regulations, the SEC does not recognize them. **Investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into mineral reserves.**

Cautionary Note to Investors Concerning Estimates of Inferred Mineral Resources

This presentation also uses the term "inferred mineral resources". Investors are advised that while this term is recognized and required by Canadian regulations, the SEC does not recognize it. "Inferred mineral resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. **Investors are cautioned not to assume that any part or all of an inferred mineral resource exists, or is economically or legally mineable.**

Scientific and Technical Data

Cautionary Note To U.S. Investors - The SEC permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. Agnico Eagle reports mineral reserve and mineral resource estimates in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum *Best Practice Guidelines for Exploration* and *Best Practice Guidelines for Estimation of Mineral Resources and Mineral Reserves* in accordance with the Canadian securities regulatory authorities' (the "CSA") National Instrument 43-101 Standards of Disclosure for Mineral Projects ("NI 43-101"). These standards are similar to those used by the SEC's Industry Guide No. 7, as interpreted by Staff at the SEC ("Guide 7"). However, the definitions in NI 43-101 differ in certain respects from those under Guide 7. Accordingly, mineral reserve information contained herein may not be comparable to similar information disclosed by U.S. companies. Under the requirements of the SEC, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. A "final" or "bankable" feasibility study is required to meet the requirements to designate mineral reserves under Industry Guide 7. Agnico Eagle uses certain terms in this presentation, such as "measured", "indicated", "inferred" and "resources" that the SEC guidelines strictly prohibit U.S. registered companies from including in their filings with the SEC. However, in October 2018, the SEC approved final rules requiring comprehensive and detailed disclosure requirements for issuers with material mining operations. The new SEC rules will replace Guide 7 and are intended to align the SEC's disclosure requirements more closely with NI 43-101. Under the new SEC rules, SEC registrants will be permitted to disclose "mineral resources" even though they reflect a lower level of certainty than mineral reserves.

Assumptions used for the December 31, 2018 mineral reserves estimate at all mines and advanced projects reported by the Company

	Metal prices				Exchange rates		
	Gold (US$/oz)	Silver (US$/oz)	Copper (US$/lb)	Zinc (US$/lb)	C$ per US$1.00	Mexican peso per US$1.00	US$ per €1.00
Long-life operations and projects	$1,150	$16.00	$2.50	$1.00	C$1.20	MXP16.00	US$1.15
Short-life operations – Meadowbank mine, Sinter and Creston Mascota (Bravo) satellite operation at Pinos Altos					C$1.25	MXP17.00	Not applicable
Upper Canada, Upper Beaver*, Canadian Malartic mine**	$1,200	Not applicable	$2.75	Not applicable	C$1.25	Not applicable	Not applicable

**The Upper Beaver project has a C$125/tonne net smelter return (NSR)*
***The Canadian Malartic mine uses a cut-off grade between 0.37 g/t and 0.38 g/t gold (depending on the deposit)*

NI 43-101 requires mining companies to disclose mineral reserves and mineral resources using the subcategories of "proven mineral reserves", "probable mineral reserves", "measured mineral resources", "indicated mineral resources" and "inferred mineral resources". Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Notes to Investors Regarding The Use of Mineral Resources

A mineral reserve is the economically mineable part of a measured and/or indicated mineral resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at pre-feasibility or feasibility level as appropriate that include application of modifying factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified. The mineral reserves presented in this presentation are separate from and not a portion of the mineral resources.

Modifying factors are considerations used to convert mineral resources to mineral reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.

A proven mineral reserve is the economically mineable part of a measured mineral resource. A proven mineral reserve implies a high degree of confidence in the modifying factors. A probable mineral reserve is the economically mineable part of an indicated and, in some circumstances, a measured mineral resource. The confidence in the modifying factors applying to a probable mineral reserve is lower than that applying to a proven mineral reserve.

A mineral resource is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.

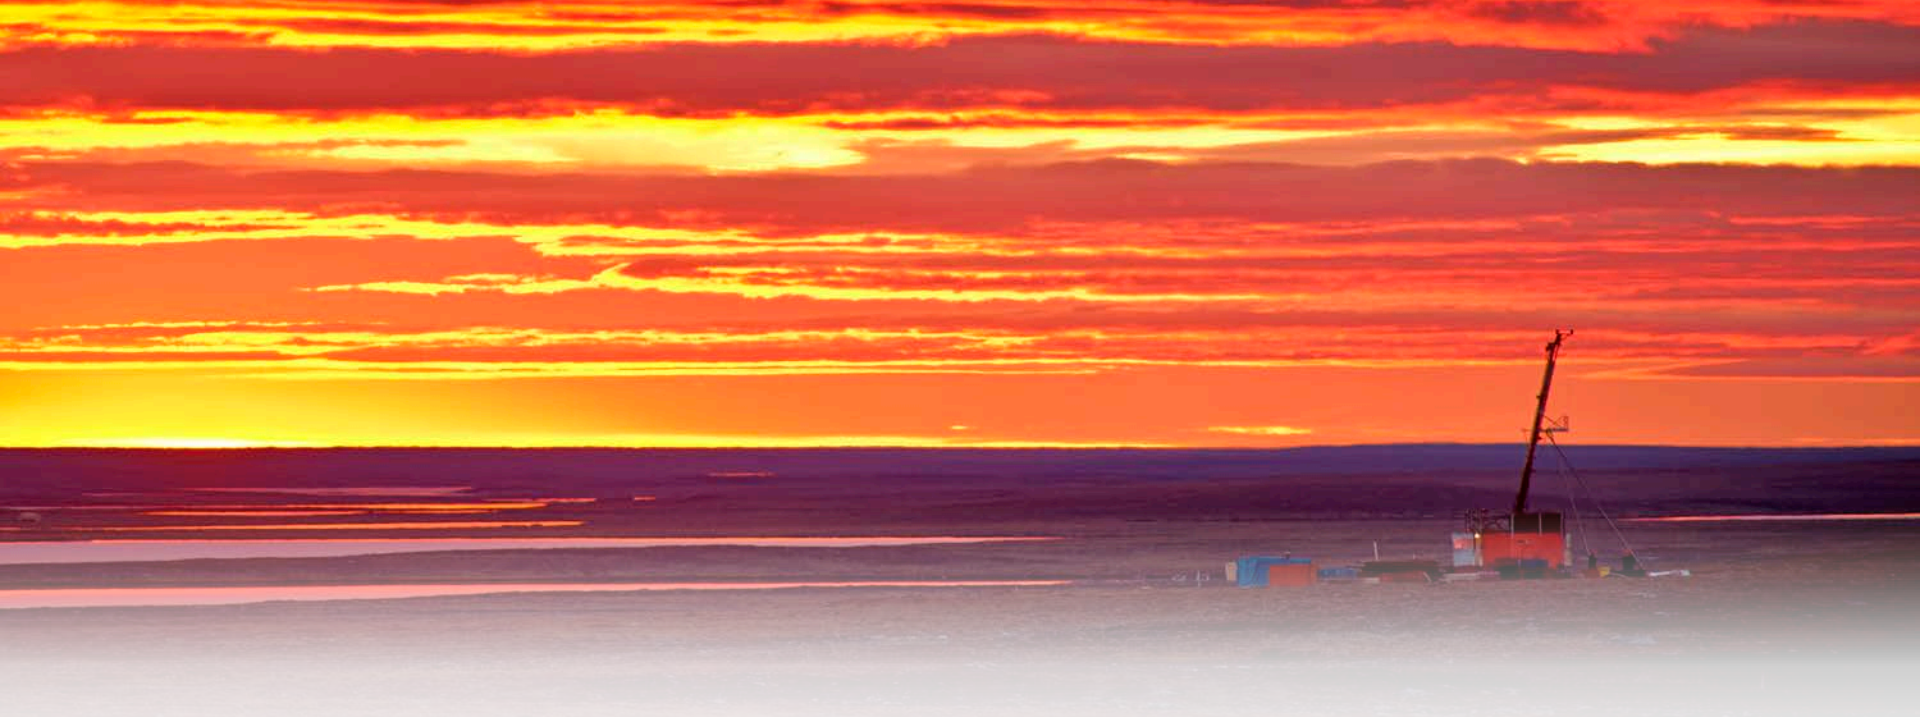

A measured mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with confidence sufficient to allow the application of modifying factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation. An indicated mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An inferred mineral resource is that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity.

Investors are cautioned not to assume that part or all of an inferred mineral resource exists, or is economically or legally mineable.

A feasibility study is a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable modifying factors together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate, at the time of reporting, that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a Pre-Feasibility Study.

The effective date for all of the Company's mineral resource and mineral reserve estimates in this presentation is December 31, 2018. Additional information about each of the mineral projects that is required by NI 43-101, sections 3.2 and 3.3 and paragraphs 3.4 (a), (c) and (d) can be found in the Technical Reports filed by Agnico Eagle, which may be found at www.sedar.com. Other important operating information can be found in the Company's AIF and Form 40-F.

The scientific and technical information relating to Agnico Eagle's mineral reserves and mineral resources contained herein (other than the Canadian Malartic mine) has been approved by Daniel Doucet, Eng., Senior Corporate Director, Reserve Development; and relating to mineral reserves and mineral resources at the Canadian Malartic mine contained herein has been approved by Donald Gervais, P.Geo., Director of Technical Services at Canadian Malartic Corporation. Each of them is a "Qualified Person" for the purposes of NI 43-101.
