

AGNICO EAGLE

MELIADINE SITE VISIT

August 19th, 2019

Forward Looking Statements

The information in this presentation has been prepared as at August 16, 2019. Certain statements contained in this presentation constitute "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and "forward-looking information" under the provisions of Canadian provincial securities laws and are referred to herein as "forward-looking statements". When used in this presentation, the words "anticipate", "could", "estimate", "expect", "forecast", "future", "plan", "potential", "will" and similar expressions are intended to identify forward-looking statements. Such statements include, without limitation: the Company's forward-looking production guidance, including estimated ore grades, recovery rates, project timelines, drilling results, metal production, life of mine estimates, total cash costs per ounce, all-in sustaining costs per ounce, minesite costs per tonne, other expenses, cash flows and free cash flow; the estimated timing and conclusions of technical studies and evaluations; the methods by which ore will be extracted or processed; statements concerning the Company's ongoing construction activities at Amaruq, the Company's expansion plans at Kittila and the Company's ramp-up activities at Meliadine, including the timing, funding, completion and commissioning thereof; statements concerning other expansion projects, recovery rates, mill throughput, optimization and projected exploration, including costs and other estimates upon which such projections are based; statements regarding timing and amounts of capital expenditures and other expenditures; estimates of future mineral reserves, mineral resources, mineral production, optimization efforts and sales; estimates of future capital expenditures and other cash needs, and expectations as to the funding thereof; future dividend amounts and payment dates; the projected development of certain ore deposits, including estimates of exploration, development and production and other capital costs and estimates of the timing of such exploration, development and production or decisions with respect to such exploration, development and production; estimates of mineral reserves and mineral resources and the effect of drill results on future mineral reserves and mineral resources; statements regarding the Company's ability to obtain the necessary permits and authorizations in connection with its proposed or current exploration, development and mining operations and the anticipated timing thereof; statements regarding anticipated future exploration; the anticipated timing of events with respect to the Company's mine sites; statements regarding the sufficiency of the Company's cash resources and other statements regarding anticipated trends with respect to the Company's operations, exploration and the funding thereof; and statements regarding the outcome of discussions with First Nations groups. Such statements reflect the Company's views as at the date of this presentation and are subject to certain risks, uncertainties and assumptions, and undue reliance should not be placed on such statements. Forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by Agnico Eagle as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The material factors and assumptions used in the preparation of the forward looking statements contained herein, which may prove to be incorrect, include, but are not limited to, the assumptions set forth herein and in management's discussion and analysis ("MD&A") and the Company's Annual Information Form ("AIF") for the year ended December 31, 2018 filed with Canadian securities regulators and that are included in its Annual Report on Form 40-F for the year ended December 31, 2018 ("Form 40-F") filed with the U.S. Securities and Exchange Commission (the "SEC") as well as: that there are no significant disruptions affecting operations; that production, permitting, development and expansion at each of Agnico Eagle's properties proceeds on a basis consistent with current expectations and plans; that the relevant metal prices, foreign exchange rates and prices for key mining and construction supplies will be consistent with Agnico Eagle's expectations; that Agnico Eagle's current estimates of mineral reserves, mineral resources, mineral grades and metal recovery are accurate; that there are no material delays in the timing for completion and commissioning of ongoing growth projects; seismic activity at the Company's operations at LaRonde is as expected by the Company; that the Company's current plans to optimize production are successful; and that there are no material variations in the current tax and regulatory environment. Many factors, known and unknown, could cause the actual results to be materially different from those expressed or implied by such forward looking statements. Such risks include, but are not limited to: the volatility of prices of gold and other metals; uncertainty of mineral reserves, mineral resources, mineral grades and mineral recovery estimates; uncertainty of future production, project development, capital expenditures and other costs; foreign exchange rate fluctuations; financing of additional capital requirements; cost of exploration and development programs; seismic activity at the Company's operations, including the LaRonde mine; mining risks; community protests, including by First Nations groups; risks associated with foreign operations; the unfavorable outcome of litigation involving the Canadian Malartic General Partnership; governmental and environmental regulation; the volatility of the Company's stock price; and risks associated with the Company's currency, fuel and by-product metal derivative strategies. For a more detailed discussion of such risks and other factors that may affect the Company's ability to achieve the expectations set forth in the forward-looking statements contained in this presentation, see the AIF and MD&A filed on SEDAR at www.sedar.com and included in the Form 40-F filed on EDGAR at www.sec.gov, as well as the Company's other filings with the Canadian securities regulators and the SEC. Other than as required by law, the Company does not intend, and does not assume any obligation, to update these forward-looking statements.

Currency

All amounts in this presentation are expressed in U.S. dollars except as otherwise noted.

Further Information

For further details on Agnico Eagle's second quarter 2019 results, please see the Company's news release dated July 24, 2019.

Notes to Investors

Note Regarding the Use of Non-GAAP Financial Measures

This presentation discloses certain measures, including "total cash costs per ounce" and "all-in sustaining costs per ounce" that are not standardized measures under IFRS. These data may not be comparable to data reported by other issuers. For a reconciliation of these measures to the most directly comparable financial information reported in the consolidated financial statements prepared in accordance with IFRS and for an explanation of how management uses these measures, see "Non-GAAP Financial Performance Measures" in the MD&A filed on SEDAR at www.sedar.com and included in the Form 6-K filed on EDGAR at www.sec.gov, as well as the Company's other filings with the Canadian securities regulators and the SEC.

The total cash costs per ounce of gold produced is reported on both a by-product basis (deducting by-product metal revenues from production costs) and co-product basis (without deducting by-product metal revenues). Unless otherwise specified total cash costs per ounce of gold produced is reported on a by-product basis in this presentation. The total cash costs per ounce of gold produced on a by-product basis is calculated by adjusting production costs as recorded in the consolidated statements of income for by-product revenues, unsold concentrate inventory production costs, smelting, refining and marketing charges and other adjustments, and then dividing by the number of ounces of gold produced. The total cash costs per ounce of gold produced on a co-product basis is calculated in the same manner as the total cash costs per ounce of gold produced on a by-product basis except that no adjustment is made for by-product metal revenues. Accordingly, the calculation of total cash costs per ounce of gold produced on a co-product basis does not reflect a reduction in production costs or smelting, refining and marketing charges associated with the production and sale of by-product metals. The total cash costs per ounce of gold produced is intended to provide information about the cash-generating capabilities of the Company's mining operations. Management also uses these measures to monitor the performance of the Company's mining operations. As market prices for gold are quoted on a per ounce basis, using the total cash costs per ounce of gold produced on a by-product basis measure allows management to assess a mine's cash-generating capabilities at various gold prices.

All-in sustaining costs per ounce ("AISC") is used to show the full cost of gold production from current operations. The Company calculates all-in sustaining costs per ounce of gold produced on a by-product basis as the aggregate of total cash costs per ounce on a by-product basis, sustaining capital expenditures (including capitalized exploration), general and administrative expenses (including stock options) and reclamation expenses. The all-in sustaining costs per ounce of gold produced on a co-product basis is calculated in the same manner as the all-in sustaining costs per ounce of gold produced on a by-product basis, except that the total cash costs per ounce on a co-product basis are used, meaning no adjustment is made for by-product metal revenues. Management is aware that these per ounce measures of performance can be affected by fluctuations in foreign exchange rates and, in the case of total cash costs per ounce of gold produced on a by-product basis, by-product metal prices. Management compensates for these inherent limitations by using these measures in conjunction with other data prepared in accordance with IFRS. The World Gold Council ("WGC") is a non-regulatory market development organization for the gold industry. Although the WGC is not a mining industry regulatory organization, it has worked closely with its member companies to develop relevant non-GAAP measures. The Company follows the guidance on all-in sustaining costs released by the WGC in November 2018. Adoption of the all-in sustaining costs metric is voluntary and, notwithstanding the Company's adoption of the WGC's guidance, all-in sustaining costs per ounce of gold produced reported by the Company may not be comparable to data reported by other gold producers. The Company believes that this measure provides helpful information about operating performance. However, this non-GAAP measure should be considered together with other data prepared in accordance with IFRS as it is not necessarily indicative of operating costs or cash flow measures prepared in accordance with IFRS.

The Company calculates mine operating profit for a given period by taking the amount equal to the Company’s gold production from its mines multiplied by the differential in the price of gold over the total cash costs per ounce. Management uses mine operating profit as a means of assessing the cash flow generation of the business. Estimates of mine operating profit in future periods are based on the Company's production guidance, total cash cost guidance and internal forecasts as of the date hereof.

Note Regarding Production Guidance

The gold production guidance is based on the Company's mineral reserves but includes contingencies and assumes metal prices and foreign exchange rates that are different from those used in the mineral reserve estimates. These factors and others mean that the gold production guidance presented in this presentation does not reconcile exactly with the production models used to support these mineral reserves.

The Company's production guidance at Meliadine is based, in part, on the results of preliminary economic assessments. These preliminary economic assessments include inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the production guidance set out in this presentation will be realized. The preliminary economic assessment used in respect of the Meliadine mine project included 3.6 million contained ounces of inferred mineral resource, 3.3 million contained ounces of measured and indicated mineral resource and 3.4 million contained ounces of proven and probable mineral reserve. For further information on the Company's production guidance at Meliadine, including the qualifications and assumptions made in connection with the preparation of the assessments, please see the Company's press release dated February 14, 2019 and the Company's AIF, as well as the Company's other filings with the Canadian securities regulators and the SEC.

Agnico Eagle in Nunavut

A Unique Ability to Create Value in the North

Tremendous Long-term Potential:

- 3.5 times the size of France, with approximately 40,000 people
- Young, ambitious, and entrepreneurial population
- Significant geological potential
- The Inuit have identified mineral development as a key economic platform
- Well established regulatory regime
- Potential to lower costs with cheaper, renewable energy options

Agnico Eagle's Nunavut Vision

Multi-decade, Measured Approach in a Low Risk, Geologically Prospective Region

- **Significant Knowledge Gained from our Meadowbank Experience**
  - Building and operating in the North
  - Integration of our Abitibi platform (technical skills, people, logistics)
  - Shared Nunavut Infrastructure (ports, fuel, travel, administration)

- **Established Partnerships with Local Communities and Governments**
  - Largest private employer, helped establish local contractors and businesses
  - Strong relationships with local governments, permitting agencies and communities

- **Meliadine and Meadowbank Infrastructure Provides a Base for Additional Development**
  - Current operations provide a strong platform for growth with 700-800 kozs of annual production
  - Large prospective land package (> 1M acres)
  - Use cash flow from operations to expand production at a measured pace

Socio-economics in Nunavut

Production Information

Meadowbank

- 249k ounces of gold produced in 2018

Nunavut Output

The Meadowbank Complex

- 230k ounces of gold estimated in 2019

Meliadine

- 230k ounces of gold estimated in 2019

2018 Highlights

1 mine
2 development projects

2,664
Employees and contractors

$570M
Invested in growth capital

15%
of Agnico Eagle's total production

Economic Impact in 2018

$408M
Goods and services purchases with Inuit firms

$710K
Donations, sponsorships and community investments

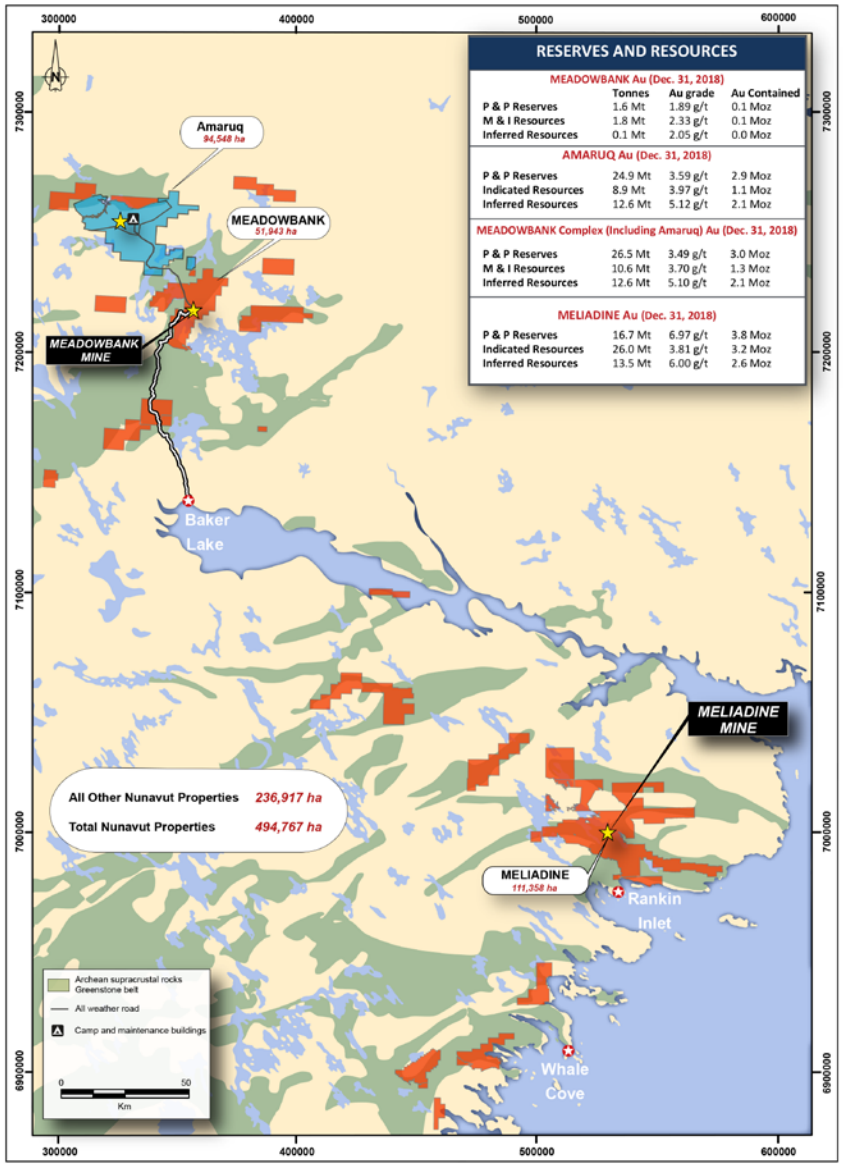

+ 80
Suppliers registered with Nunavut Tunngavik Inc. provided good and services

$114M
Wage and benefits from our Meadowbank mine and Meliadine project

$9M
in municipal tax, royalties and fees to the Kivalliq Inuit Association and Nunavut Tunngavik Incorporated

Nunavut Assets Provide Production and Reserve Growth in 2019 and Beyond

Large Prospective Land Position – 474,767 Hectares in 3 Major Geological Belts

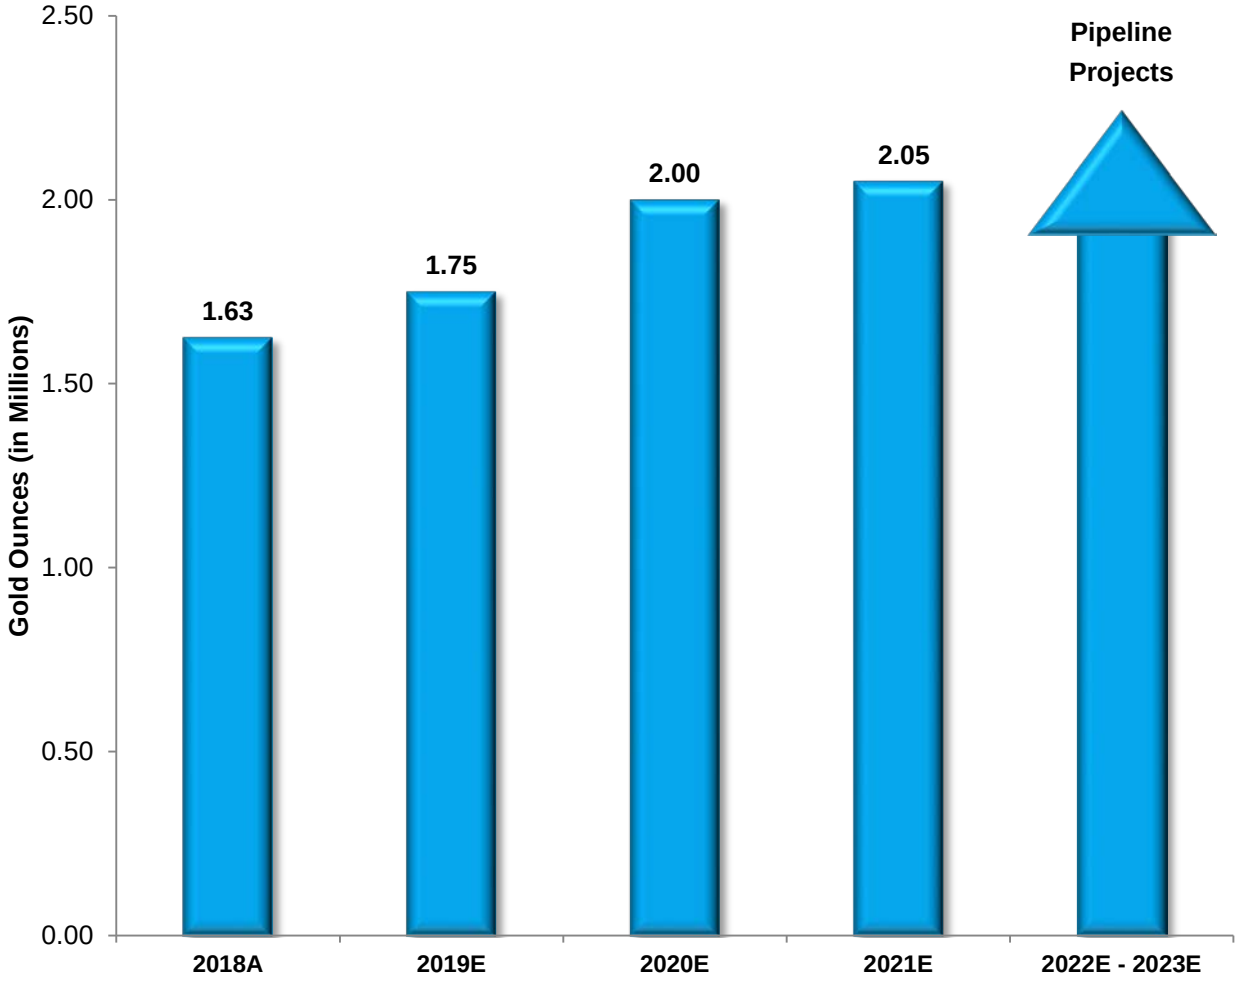

Major Assets:

- **Meadowbank**
  - Acquired in 2007 from Cumberland Resources Ltd.
  - Commenced operations in 2010 and production forecast to continue into Q3 2019
- **Amaruq**
  - Grassroots Exploration Discovery in 2013
  - Developed as a satellite deposit to Meadowbank
  - Commercial production expected in Q3 2019
- **Meliadine**
  - Acquired from Comaplex Mineral Corp. in 2010
  - Commercial production declared May 14, 2019

Detailed information on mineral reserves and mineral resources can be found in the February 14, 2018 press release

Nunavut Production Platform Supports Continued Growth

Pipeline Expected to Drive Future Production Growth Beyond 2021

Near-Term Pipeline Projects (2021-2023)

- LaRonde Complex
- Goldex Deep 2 & South Zone
- Odyssey & East Malartic U/G
- Amaruq U/G
- Meliadine Phase 2 expansion
- Kittila expansion (under construction)
- Pinos Altos satellites
- La India satellites

AGNICO EAGLE

MELIADINE

Meliadine Highlights

- Project completed on schedule and below budget with commercial production declared on May 14, 2019
- Total project construction costs (at the date of commercial production) were ~$830M (below the forecast of $900M)
- Operations (mine and mill) will continue to ramp up to full capacity through year-end 2019
- 2019 production guidance (including pre-commercial production) is ~230koz gold
- Exploration ongoing to expand mineral reserve and mineral resources

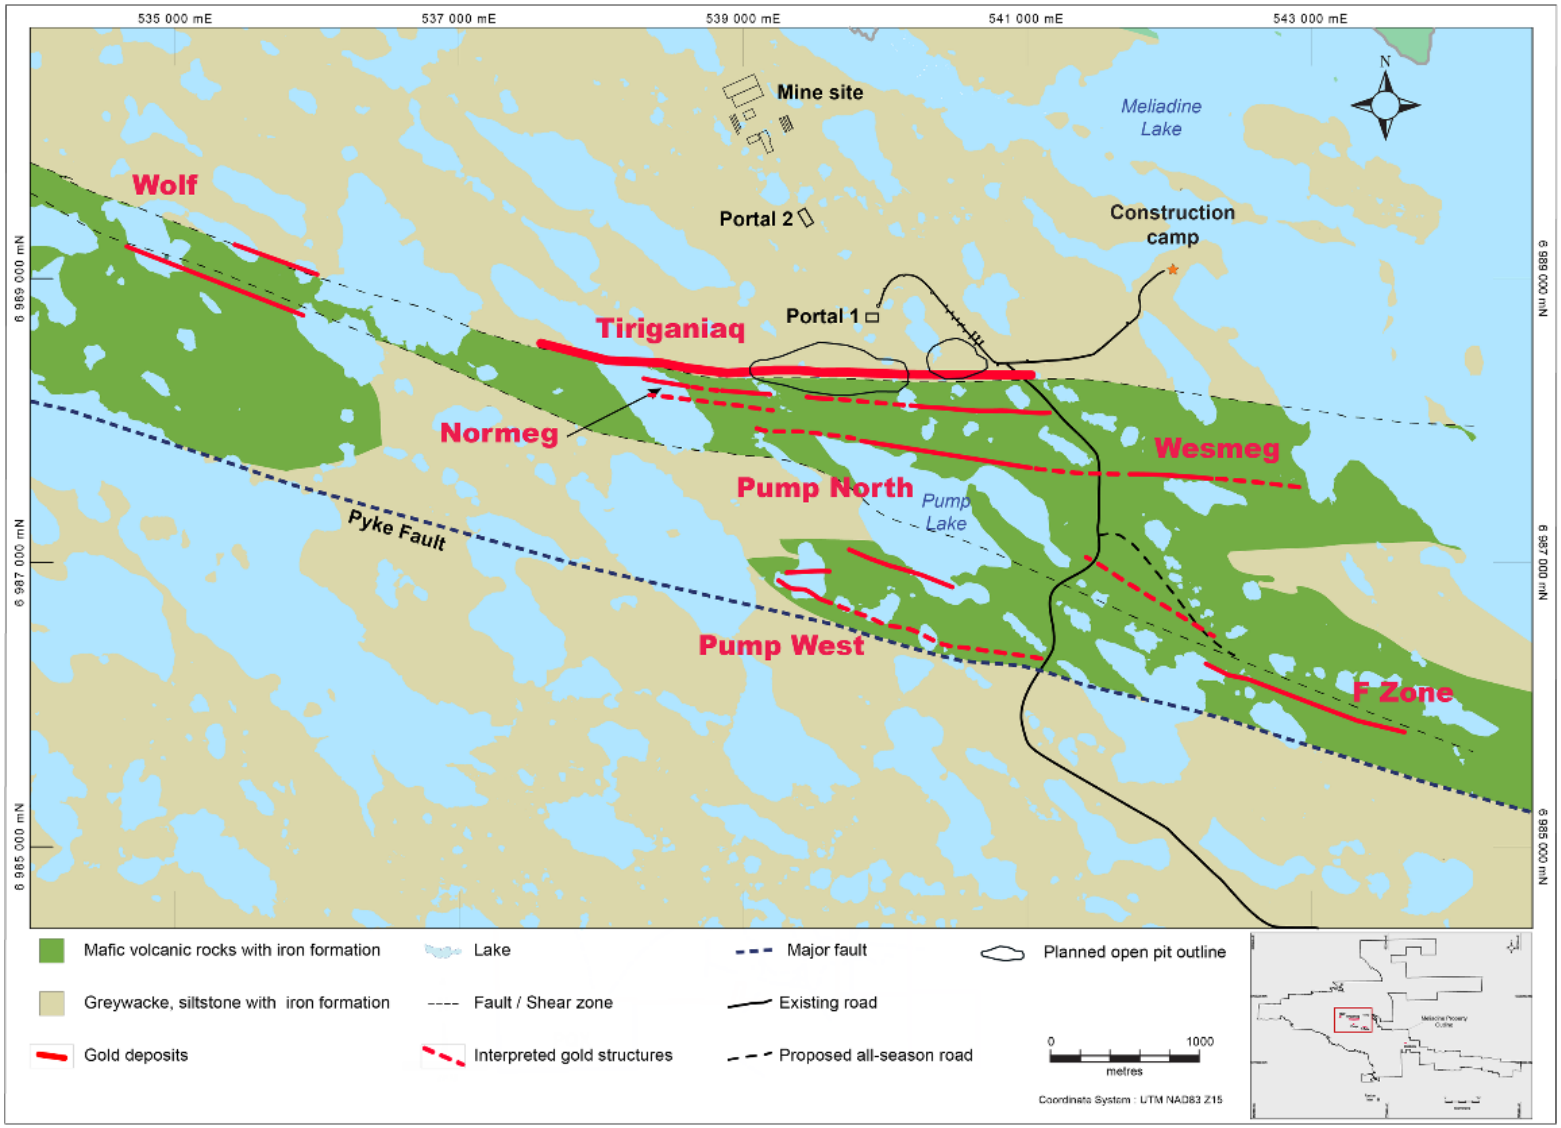

Meliadine History

Years	Ownership	Highlights
1987-1988	Asamera	Investigation of gold occurrence at Tonic Lake
1989-1992	Asamera/Comaplex	Discovery and Wolf deposits discovered
1993-1994	Comaplex/Cumberland	Tiriganiaq, F-Zone and Pump deposits discovered
1995-2003	WMC	Drilling on known deposits and regional assets
2004-2009	Comaplex	Drilling on known deposits and regional assets Underground development and 1st bulk sample program
2010	AEM	Acquisition of Comaplex (100% interest in Meliadine)
2010-2014	AEM	Drilling on known deposits and regional assets Underground development and 2nd bulk sample program
2015	AEM	Issuance of Project Certificate and signing of Inuit Impact Benefit Agreement (IIBA)
2015-2016	AEM	Additional Technical studies and completion of NI 43-101
2017	AEM	Meliadine approved for development
2017-2018	AEM	Construction Activities
2019	AEM	Declaration of Commercial Production on May 14

Meliadine Mineral Reserves and Mineral Resources

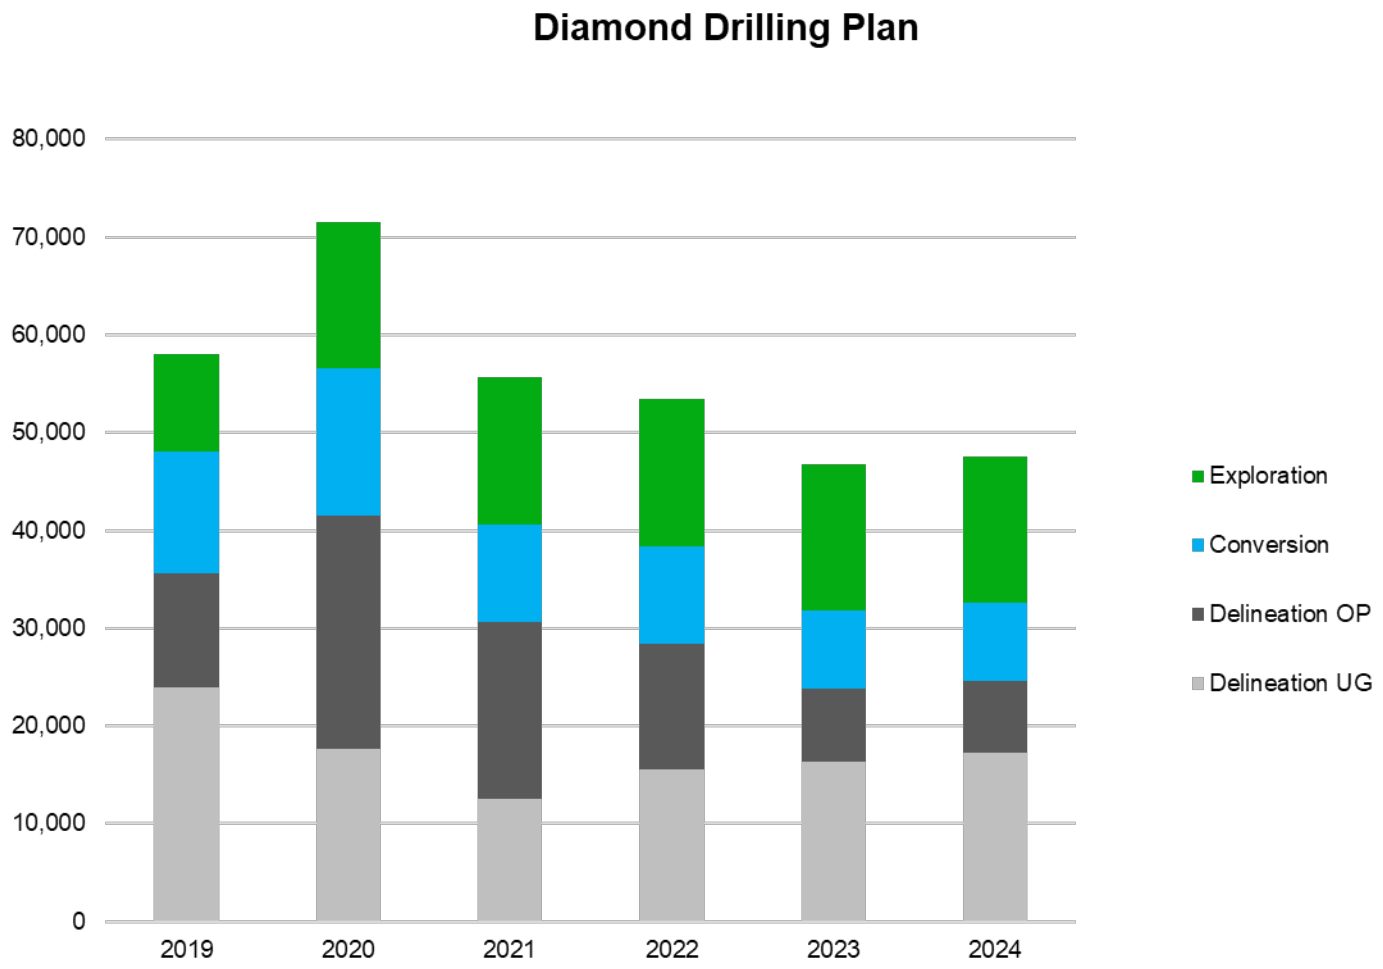

Significant Mineral Reserves and Mineral Resources Growth Since Acquisition

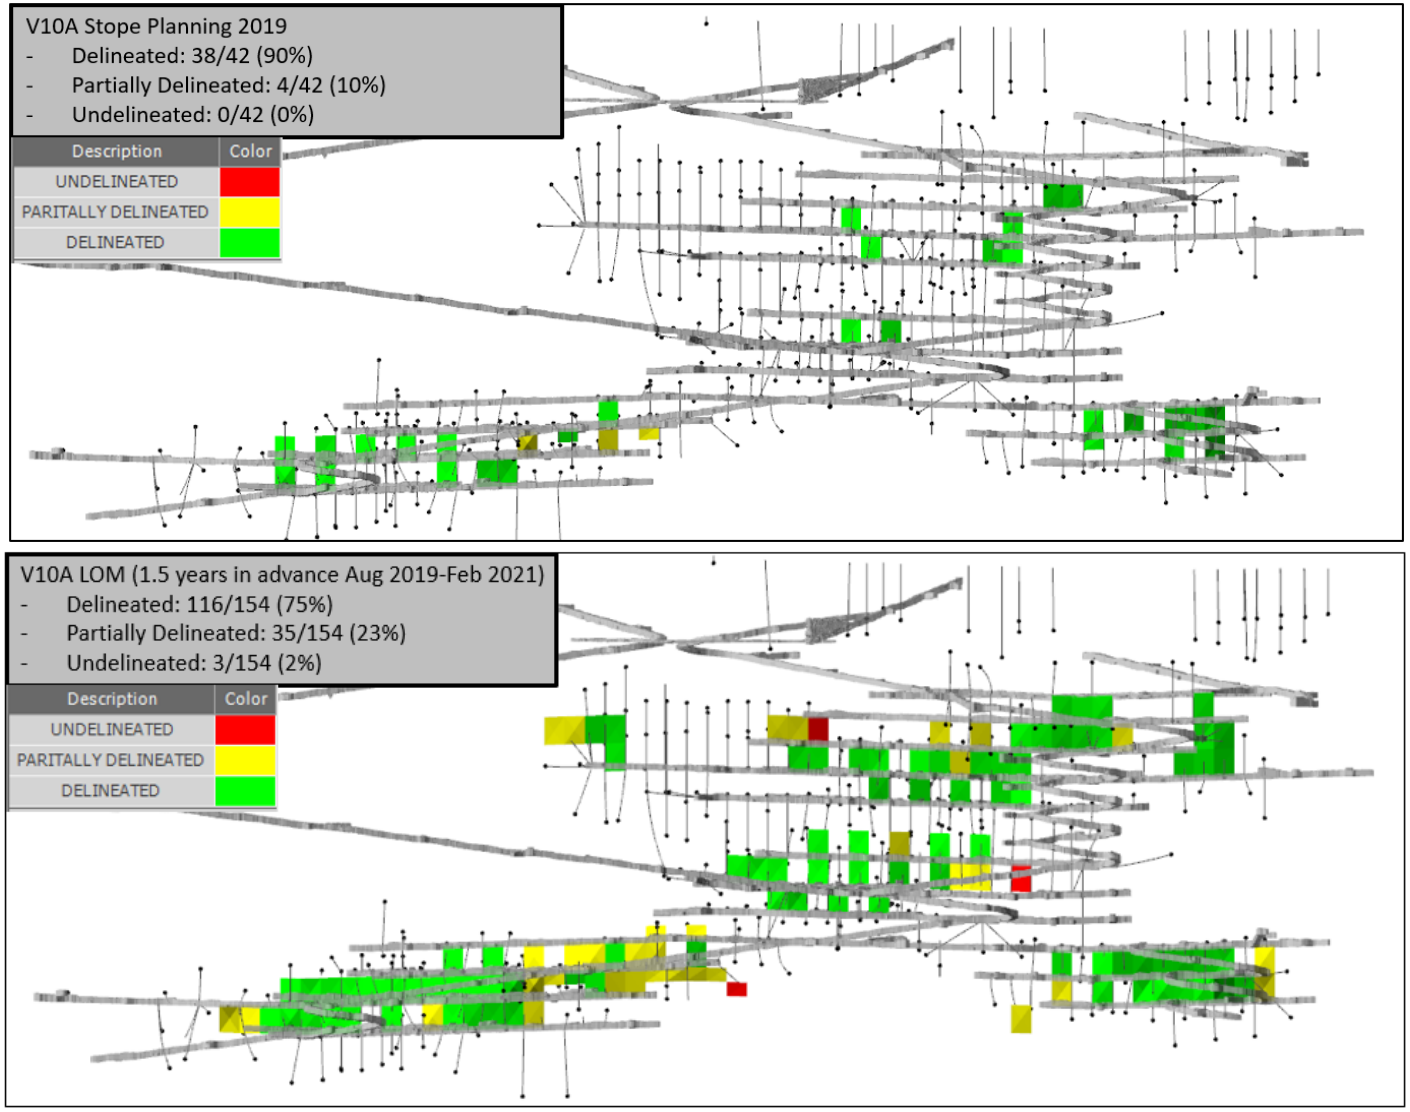

Mineral Reserve & Mineral Resource Data (as at December 31, 2018)	Tonnage (000's tonnes)	Au Grade (g/t)	Au(000's oz)
Proven & Probable mineral reserves			
Open pit	3,702	5.52	657
Underground	13,033	7.39	3,095
Total proven & probable reserves	**16,736**	**6.97**	**3,753**
Indicated mineral resources			
Open pit	10,643	3.51	1,200
Underground	15,319	4.02	1,979
Total indicated mineral resources	**25,962**	**3.81**	**3,179**
Inferred mineral resources			
Open pit	997	4.60	148
Underground	12,482	6.11	2,450
Total inferred mineral resources	**13,479**	**6.00**	**2,598**

Detailed information on mineral reserves and mineral resources can be found in the February 15, 2019 news release

Diamond Drilling Plan 2019-2024

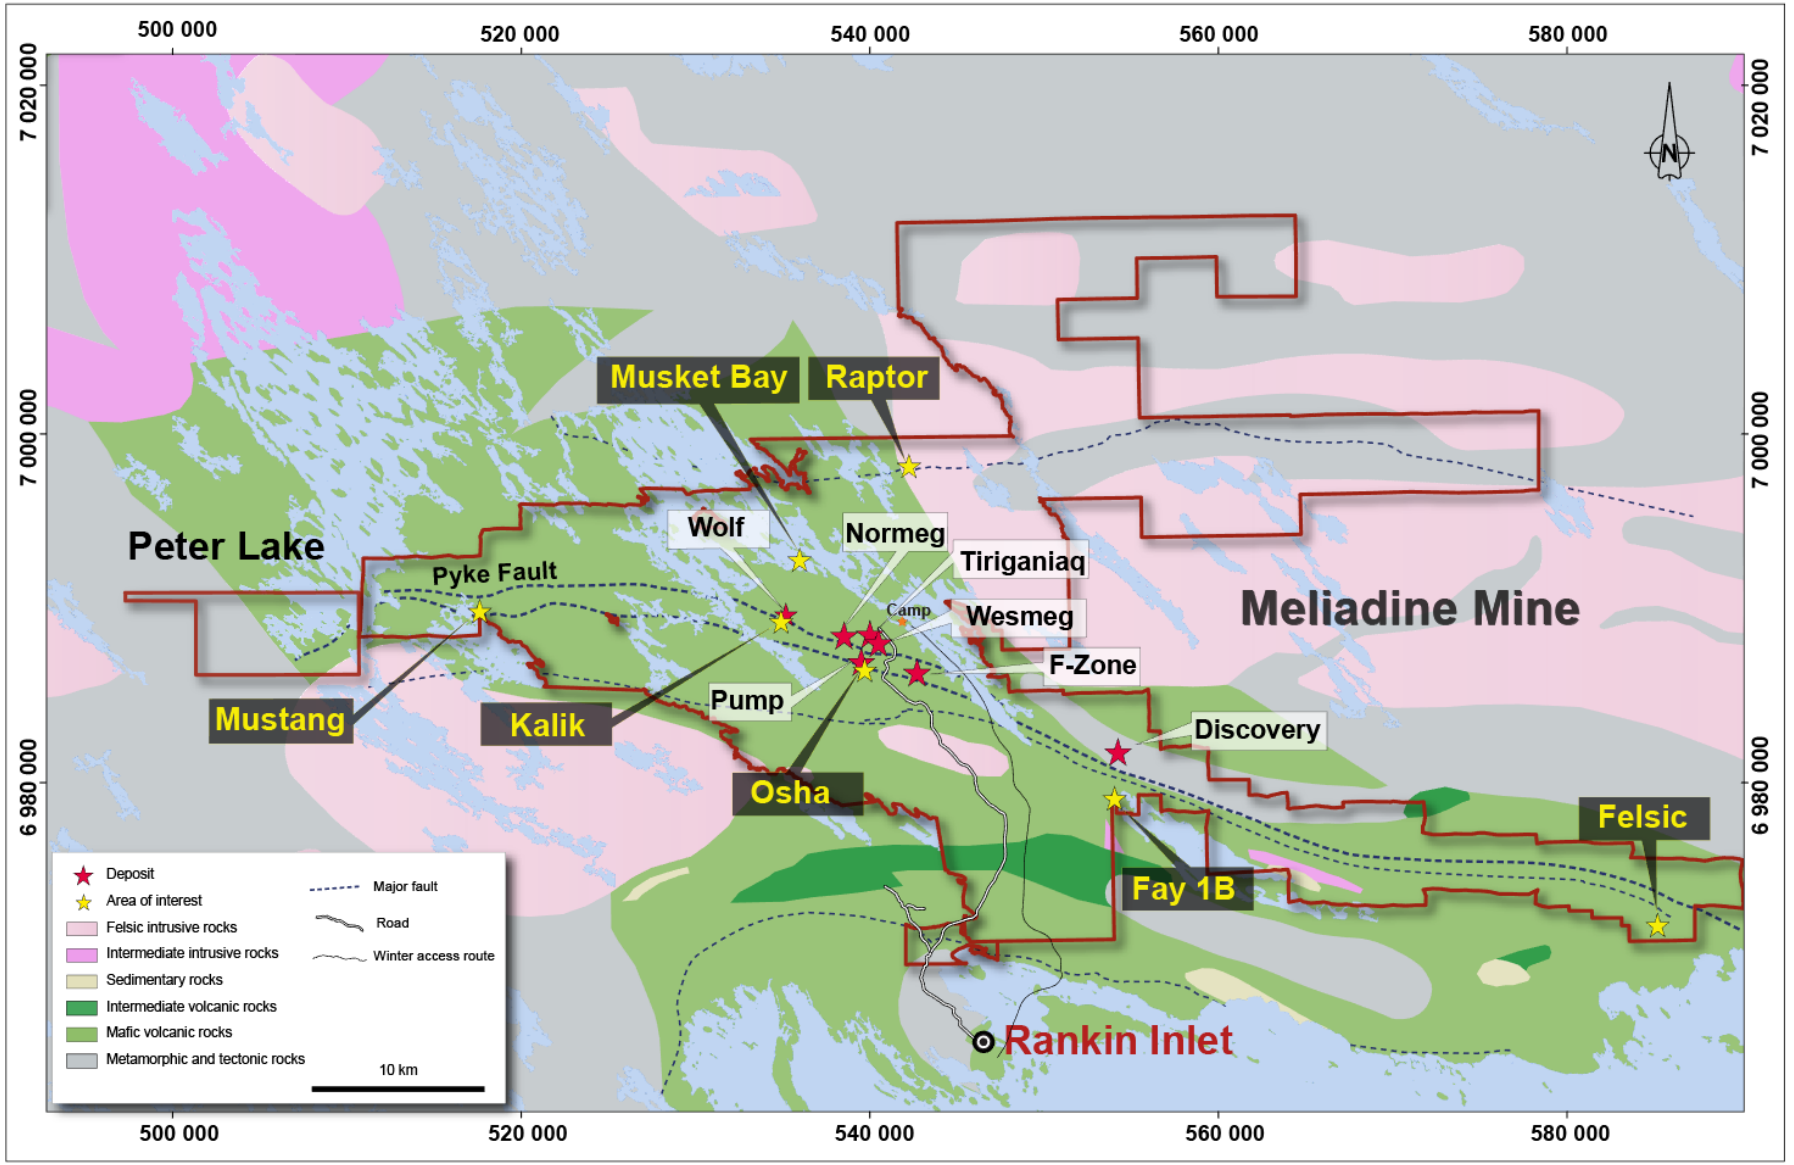

Delineation Drilling Program

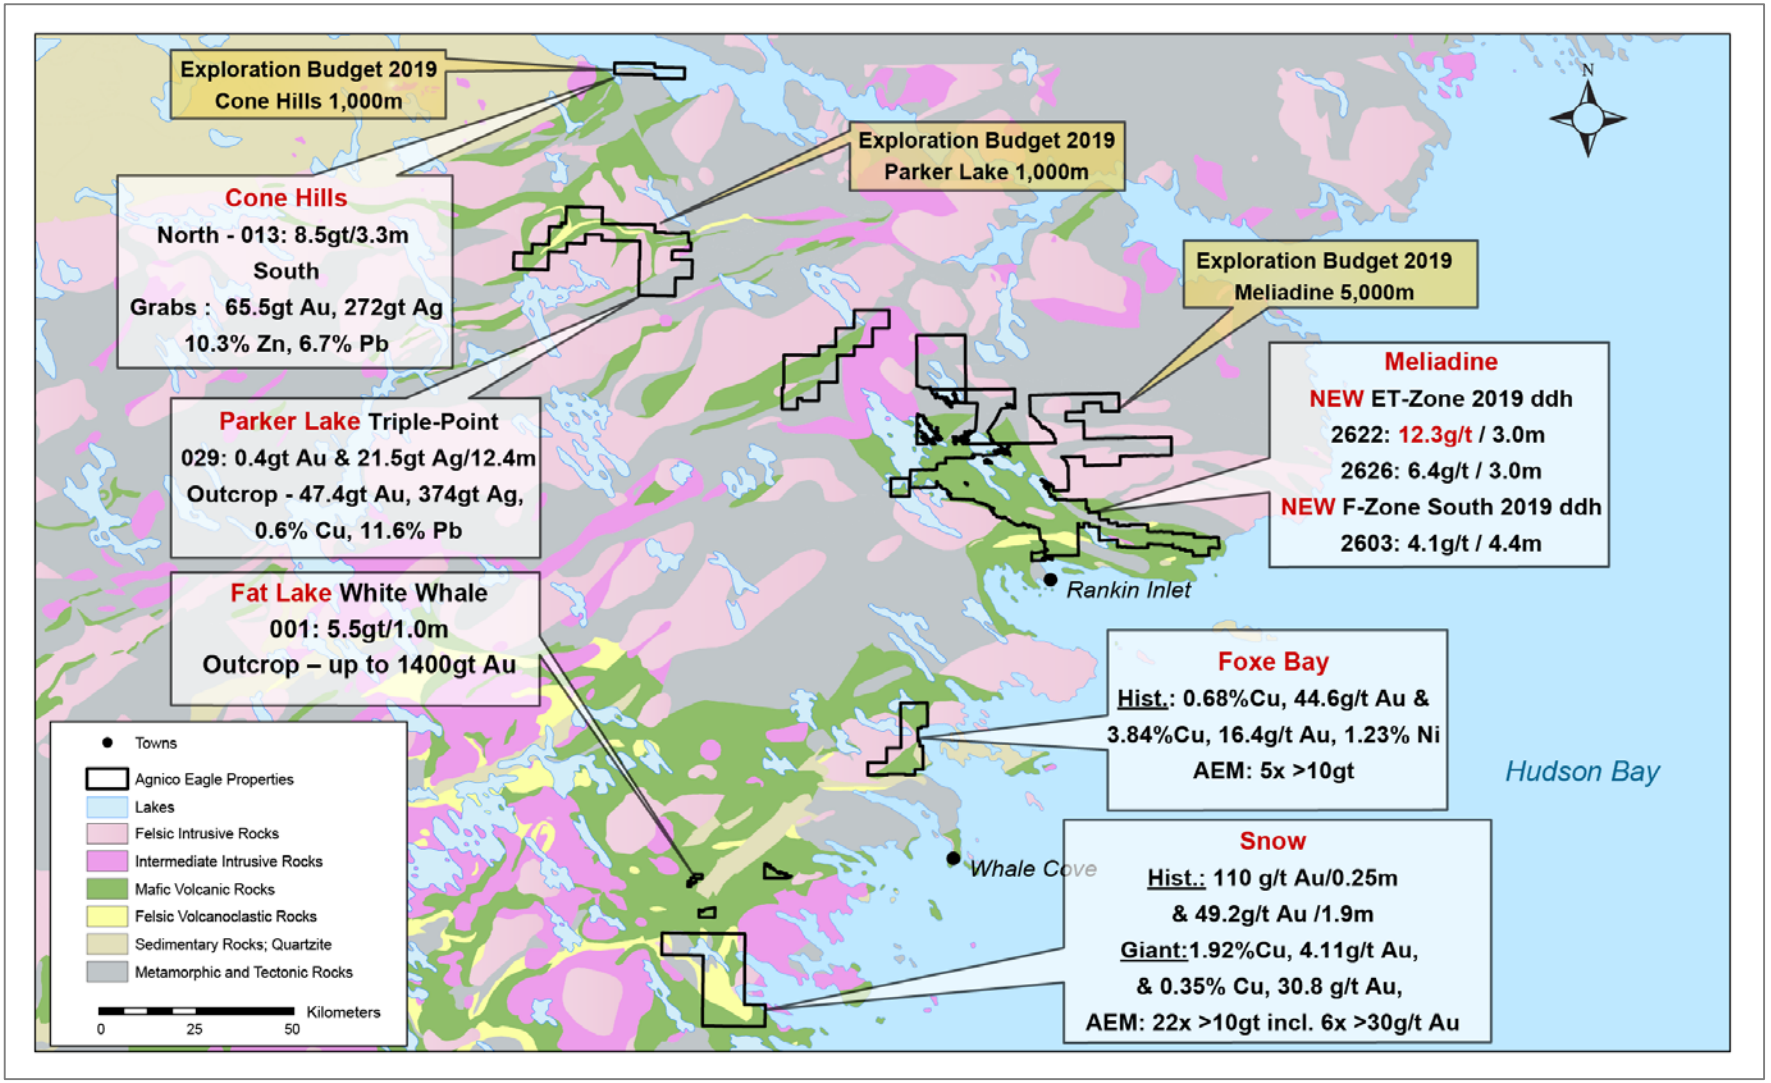

Meliadine Property Geology

Property Covers an 80km Long Prospective Greenstone Belt with Multiple High Potential Targets

2019 Regional Exploration

OPERATIONAL HIGHLIGHTS

Infrastructure Completed Early 2019

- Crusher plant
- Ore silo
- Oxygen plant
- Gravity circuit
- Stripping circuit and refinery
- Acid wash
- Paste plant
- Tailings storage facility
  - 2 dykes also completed
- Heat recovery system
- Salt Effluent Treatment Plant
  - Including diffuser in Melvin Bay (sea discharge point)
- Tire shop

Operational Highlights

- Stoping activities ongoing in 3 mining horizons
- 20 stopes blasted so far (15 mined-out)
- New underground mining equipment delivered on 2019 sealift
- All process plant equipment commissioned
- Process plant continues to ramp up towards name plate capacity of 3,750 tpd and operating as per design with improvements to recoveries ongoing

Meliadine Guidance – 2019 to 2021

	2019E	2020E	2021E
Production	230,000	385,000	365,000
2019 Minesite cost per tonne	C$212		
2019 Total cash costs per ounce	$612		
Sustaining capital costs $ (LOM)	~$48 million per year		
Mine life	~14 years		

- Average annual gold production of ~400,000 ozs* in years 2 through 14

*This production guidance is based, in part, on internal preliminary economic assessments that include inferred mineral resources. For a full detailed description of mineral reserves and mineral resources please see "Note Regarding Production Guidance" on slide 3 and the Company's news release dated February 14, 2018.

AGNICO EAGLE

MINING

Mining Methods

Underground

- Longitudinal and transverse
- Pyramidal sequencing
- Long hole blasting
- 25m level spacing (20m at Discovery)
- Combination of paste backfill and dry rock fill
- Ramp access only, truck haulage to crusher
- Mine air is now heated

Open Pit

- 5-10m bench height
- Selective mining with split benching in ore, 3m minimum mining width in ore
- Bulk mining in waste rock
- Small equipment: 60-100t trucks, 7-11m3 loading units

Underground Infrastructure

- Desliming station (300 level)
- Main Dewatering Pump Stations (350 & 200)
  - 40-50m3/hr pumping capacity (800-1000m3/day)
  - Commissionned in April

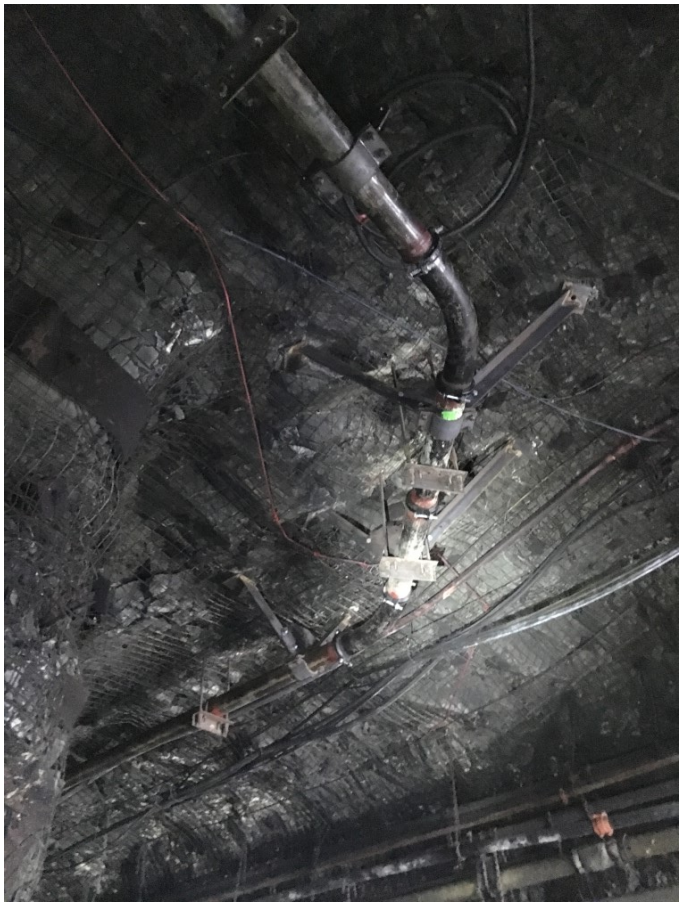

Underground Infrastructure

- Pastefill Piping Network
  - Installation from Surface to 200 Level completed in April
  - First pour in Horizon 1 in April
  - First pour in Horizon 2 in May
  - First pour in Horizon 4 planned for August

Underground Infrastructure

- Main Ventilation Network
  - Automated vent walls with louvers (VOD)
  - Remote controlled Zacon vent door
- Secondary Ventilation
  - 8 out of 13 levels activated with VOD on secondary fans
- Mine Egress
  - Safescape technology deployed from 300 to 425 level

Mine Development

Lateral Development

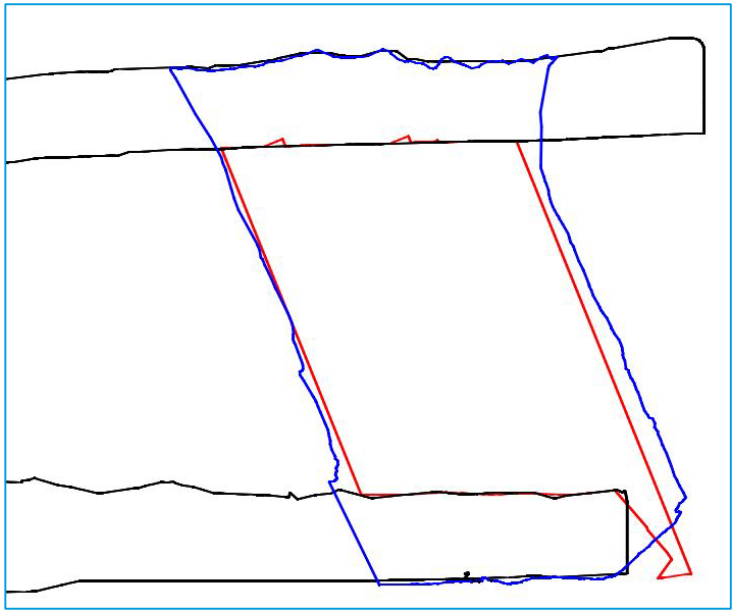

- 6,680m developed YTD
- Development rate reduced until barges

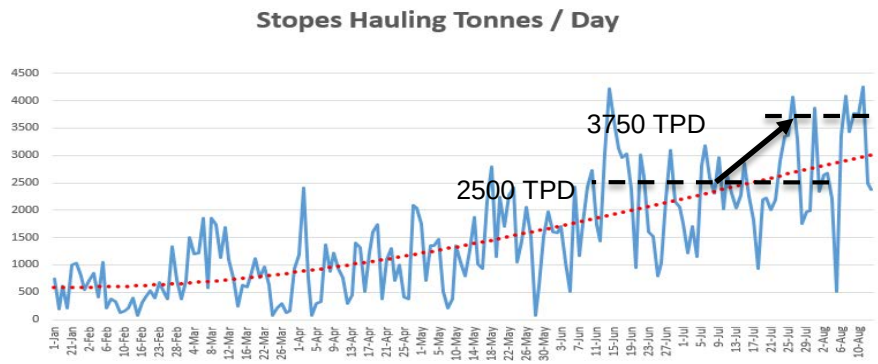

Vertical Development

- Western Exhaust Raise slashing (4.9m diam.) ongoing

Mine Operations

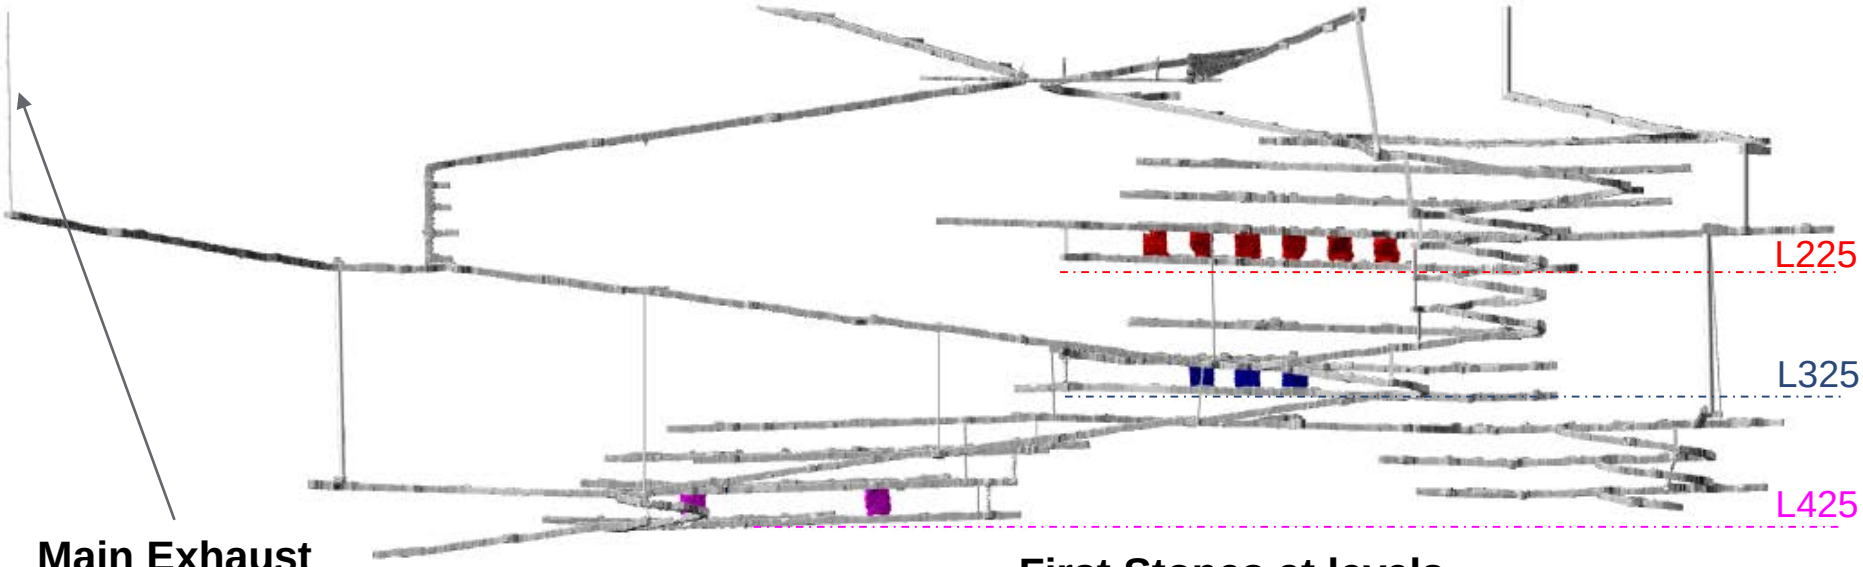

- All processes in place
- Better dilution than planned
- Mine ore production ramping-up to steady state tonnage
- August underground broken ore inventory expected to be 25,000 to 40,000 tonnes
- New equipment received on first barge and delivered to site in July 2019
- All hiring completed and career path implemented (IIBA requirement)

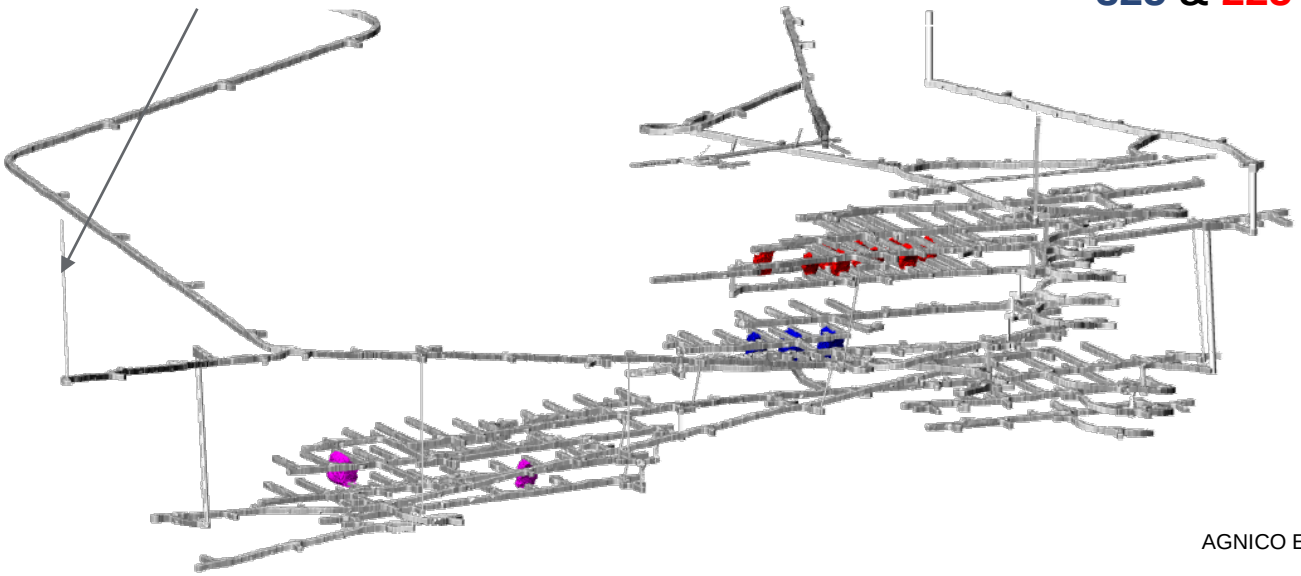

2019 Development & First Stopes

Main Exhaust (In Progress)

First Stopes at levels 325 & 225 & 425

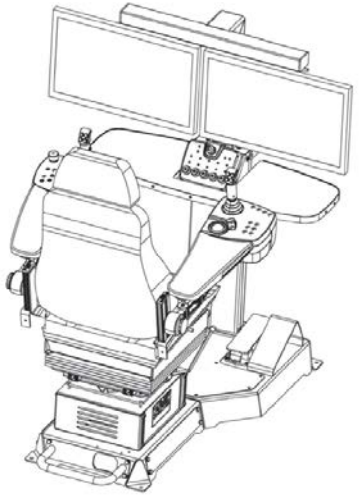

2019 Targets

Production drilling	97,000 m
Backfilling	524,000 t
Lat. Dev.	13,000 m
Stopes	62

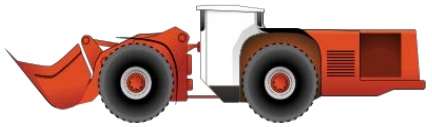

Automation and Technology

Initiatives Underway

1. Mine digitalization (Ongoing)
2. Ventilation On Demand (Implemented)
3. Collision awareness (Implemented)
4. Fleet Monitoring automation (Ongoing)
5. Tele-remote Drilling automation (Ongoing)
6. Tele-remote mucking and driverless trucking (Ongoing)

PROCESSING

Processing Highlights

- Mill commissioning began in late 2018
  - Name plate capacity 3,750 tpd
  - Milling waste until February 2019
- First pour achieved February 21st
  - Low-grade ore processed until gravity circuit commissioned. High grade fed to mill mid-April
- Paste plant started April 22nd
- Commercial production achieved May 14th
  - Mill achieved up to 4,800 tpd (~3,900 tpd average in August)
  - Gold recovery (~94.6% to mid-August)

Mill Performance – August 2019

Flexibility to Increase Mill Throughput with Consistent Recovery Rates

Date	Tonnes Milled	Grind Size (microns)	Recovery (%)
1-Aug-19	4,700	112.2	94.8
2-Aug-19	2,943	102.9	93.1
3-Aug-19	4,639	82.4	92.9
4-Aug-19	4,621	92.2	93.4
5-Aug-19	2,096	88.8	96.0
6-Aug-19	4,826	81.8	93.7
7-Aug-19	3,771	68.0	95.0
8-Aug-19	4,722	91.1	95.8
9-Aug-19	4,155	67.8	96.3
10-Aug-19	2,130	58.9	93.2
11-Aug-19	3,843	89.2	96.3

- Grade in June averaged 9.3 g/t and the grade in July averaged 8.1 g/t
- August grades are expected to be similar to grades in June and July

Tailings Storage Facility

State of the Art Design Using Filtered (Dry Stack) Tailings

- **Capacity:**
  - 6.6 million m^3 tailings
  - 1.3 million m^3 waste rock (closure cover)
- Active filtered tailings placement began February 2, 2019
- **<u>260,000 m^3</u>** placed through July 31st, 2019
- 53,000 m^3 closure cover placed July 31st, 2019

Meliadine Grand Opening – June 2019

Mineral reserves are not a subset of mineral resources. Tonnage amounts and contained metal amounts presented in this table have been rounded to the nearest thousand, so aggregate amounts may differ from column totals.

Notes to Investors Regarding The Use of Mineral Resources

Cautionary Note to Investors Concerning Estimates of Measured and Indicated Mineral Resources

This presentation uses the terms "measured mineral resources" and "indicated mineral resources". Investors are advised that while those terms are recognized and required by Canadian regulations, the SEC does not recognize them. **Investors are cautioned not to assume that any part or all of mineral deposits in these categories will ever be converted into mineral reserves.**

Cautionary Note to Investors Concerning Estimates of Inferred Mineral Resources

This presentation also uses the term "inferred mineral resources". Investors are advised that while this term is recognized and required by Canadian regulations, the SEC does not recognize it. "Inferred mineral resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. **Investors are cautioned not to assume that any part or all of an inferred mineral resource exists, or is economically or legally mineable.**

Scientific and Technical Data

Cautionary Note To U.S. Investors - The SEC permits U.S. mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. Agnico Eagle reports mineral reserve and mineral resource estimates in accordance with the Canadian Institute of Mining, Metallurgy and Petroleum *Best Practice Guidelines for Exploration* and *Best Practice Guidelines for Estimation of Mineral Resources and Mineral Reserves* in accordance with the Canadian securities regulatory authorities' (the "CSA") National Instrument 43-101 Standards of Disclosure for Mineral Projects ("NI 43-101"). These standards are similar to those used by the SEC's Industry Guide No. 7, as interpreted by Staff at the SEC ("Guide 7"). However, the definitions in NI 43-101 differ in certain respects from those under Guide 7. Accordingly, mineral reserve information contained herein may not be comparable to similar information disclosed by U.S. companies. Under the requirements of the SEC, mineralization may not be classified as a "reserve" unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. A "final" or "bankable" feasibility study is required to meet the requirements to designate mineral reserves under Industry Guide 7. Agnico Eagle uses certain terms in this presentation, such as "measured", "indicated", "inferred" and "resources" that the SEC guidelines strictly prohibit U.S. registered companies from including in their filings with the SEC. However, in October 2018, the SEC approved final rules requiring comprehensive and detailed disclosure requirements for issuers with material mining operations. The new SEC rules will replace Guide 7 and are intended to align the SEC's disclosure requirements more closely with NI 43-101. Under the new SEC rules, SEC registrants will be permitted to disclose "mineral resources" even though they reflect a lower level of certainty than mineral reserves.

Assumptions used for the December 31, 2018 mineral reserves estimate at all mines and advanced projects reported by the Company

	Metal prices				Exchange rates		
	Gold (US$/oz)	Silver (US$/oz)	Copper (US$/lb)	Zinc (US$/lb)	C$ per US$1.00	Mexican peso per US$1.00	US$ per €1.00
Long-life operations and projects	$1,150	$16.00	$2.50	$1.00	C$1.20	MXP16.00	US$1.15
Short-life operations – Meadowbank mine, Sinter and Creston Mascota (Bravo) satellite operation at Pinos Altos					C$1.25	MXP17.00	Not applicable
Upper Canada, Upper Beaver*, Canadian Malartic mine**	$1,200	Not applicable	$2.75	Not applicable	C$1.25	Not applicable	Not applicable

**The Upper Beaver project has a C$125/tonne net smelter return (NSR)*
***The Canadian Malartic mine uses a cut-off grade between 0.37 g/t and 0.38 g/t gold (depending on the deposit)*

NI 43-101 requires mining companies to disclose mineral reserves and mineral resources using the subcategories of "proven mineral reserves", "probable mineral reserves", "measured mineral resources", "indicated mineral resources" and "inferred mineral resources". Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Notes to Investors Regarding The Use of Mineral Resources

A mineral reserve is the economically mineable part of a measured and/or indicated mineral resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at pre-feasibility or feasibility level as appropriate that include application of modifying factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified. The mineral reserves presented in this presentation are separate from and not a portion of the mineral resources.

Modifying factors are considerations used to convert mineral resources to mineral reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.

A proven mineral reserve is the economically mineable part of a measured mineral resource. A proven mineral reserve implies a high degree of confidence in the modifying factors. A probable mineral reserve is the economically mineable part of an indicated and, in some circumstances, a measured mineral resource. The confidence in the modifying factors applying to a probable mineral reserve is lower than that applying to a proven mineral reserve.

A mineral resource is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.

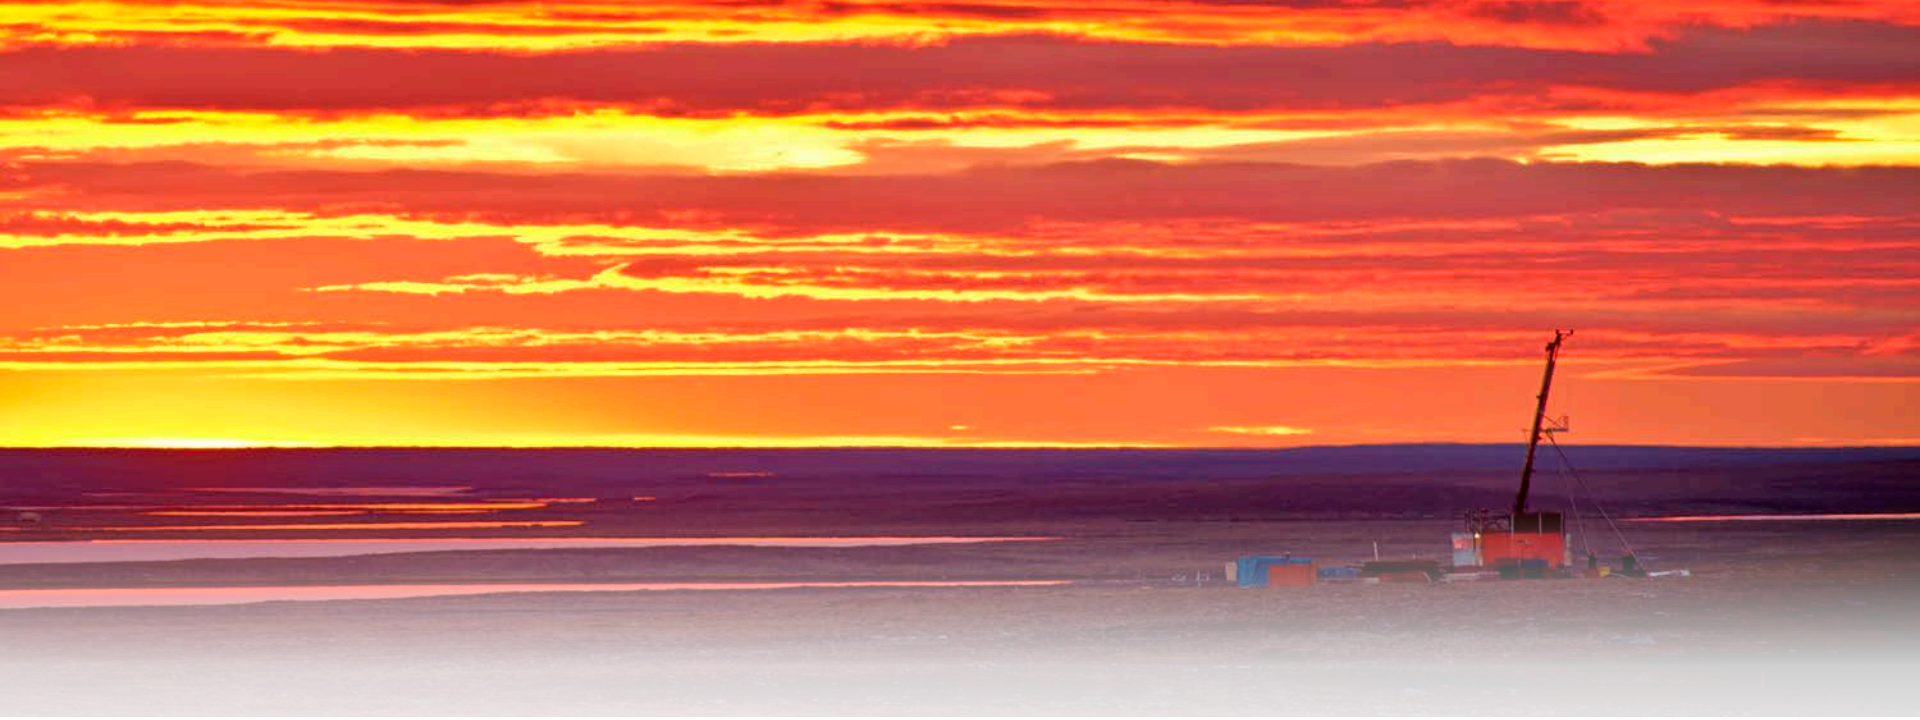

A measured mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with confidence sufficient to allow the application of modifying factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation. An indicated mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An inferred mineral resource is that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity.

Investors are cautioned not to assume that part or all of an inferred mineral resource exists, or is economically or legally mineable.

A feasibility study is a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable modifying factors together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate, at the time of reporting, that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a Pre-Feasibility Study.

The effective date for all of the Company's mineral resource and mineral reserve estimates in this presentation is December 31, 2018. Additional information about each of the mineral projects that is required by NI 43-101, sections 3.2 and 3.3 and paragraphs 3.4 (a), (c) and (d) can be found in the Technical Reports filed by Agnico Eagle, which may be found at www.sedar.com. Other important operating information can be found in the Company's AIF and Form 40-F.

The scientific and technical information relating to Agnico Eagle's mineral reserves and mineral resources contained herein (other than the Canadian Malartic mine) has been approved by Daniel Doucet, Eng., Senior Corporate Director, Reserve Development; and relating to mineral reserves and mineral resources at the Canadian Malartic mine contained herein has been approved by Donald Gervais, P.Geo., Director of Technical Services at Canadian Malartic Corporation. Each of them is a "Qualified Person" for the purposes of NI 43-101.
