Executive Summary
Fourth Quarter and Full Year 2022 Results

February 16, 2023

AGNICO EAGLE

FORWARD LOOKING STATEMENTS

The information in this presentation has been prepared as at February 16, 2023. Certain statements contained in this presentation constitute "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and "forward-looking information" under the provisions of Canadian provincial securities laws and are referred to herein as "forward-looking statements". All statements, other than statements of historical fact, that address circumstances, events, activities or developments that could, or may or will occur are forward looking statements. When used in this presentation, the words "anticipate", "could", "estimate", "expect", "forecast", "future", "plan", "possible", "potential", "will", "aim", "target" and similar expressions are intended to identify forward-looking statements. Such statements include, without limitation: the Company's forward-looking guidance, including metal production, estimated ore grades, recovery rates, project timelines, drilling results, life of mine estimates, total cash costs per ounce, AISC per ounce, minesite costs per tonne, other expenses and cash flows; statements relating to the potential for additional gold production at Kittila, Fosterville and the AK deposit; statements relating to the expected outcomes of the Merger, including synergies arising therefrom and their expected quantum and timing; statements relating to the expected timing and outcome of the Yamana Transaction, including synergies arising therefrom and their expected quantum and timing; statements relating to the expected timing and outcome of the San Nicolás Transaction; the estimated timing and conclusions of NI 43-101 reports, technical studies and evaluations; the methods by which ore will be extracted or processed; statements concerning the Company's expansion plans at Detour, Kittila, Meliadine Phase 2, the Amaruq underground project and the Odyssey project, including the timing, funding, completion and commissioning thereof and production therefrom; statements about the Company's plans at the Hope Bay project; statements concerning other expansion projects, recovery rates, mill throughput, optimization and projected exploration, including costs and other estimates upon which such projections are based; statements regarding timing and amounts of capital expenditures, other expenditures and other cash needs, and expectations as to the funding thereof; estimates of future mineral reserves, mineral resources, mineral production and sales; the projected development of certain ore deposits, including estimates of exploration, development and production and other capital costs and estimates of the timing of such exploration, development and production or decisions with respect to such exploration, development and production; statements regarding anticipated cost inflation and its effect on the Company's costs; estimates of mineral reserves and mineral resources and the effect of drill results on future mineral reserves and mineral resources; statements regarding the Company's ability to obtain the necessary permits and authorizations in connection with its proposed or current exploration, development and mining operations and the anticipated timing thereof; statements regarding operations at and expansion of the Kitilla mine following the decision of the Vaasa Administrative Court; statements regarding future exploration; the anticipated timing of events with respect to the Company's mine sites; statements regarding the sufficiency of the Company's cash resources; statements regarding the Company's plans with respect to hedging; statements regarding future activity with respect to the Company's unsecured revolving bank credit facility; statements regarding future dividend amounts and payment dates; statements regarding anticipated trends with respect to the Company's operations, exploration and the funding thereof; and statements regarding the impact of the COVID-19 pandemic and measures taken to reduce the spread of COVID-19 on the Company's future operations, including its employees and overall business. Such statements reflect the Company's views as at the date of this presentation and are subject to certain risks, uncertainties and assumptions, and undue reliance should not be placed on such statements. Forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by Agnico Eagle as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The material factors and assumptions used in the preparation of the forward looking statements contained herein, which may prove to be incorrect, include, but are not limited to, the assumptions set forth herein and in management's discussion and analysis ("MD&A") and the Company's Annual Information Form ("AIF") for the year ended December 31, 2021 filed with Canadian securities regulators and that are included in its Annual Report on Form 40-F for the year ended December 31, 2021 ("Form 40-F") filed with the SEC as well as: that there are no significant disruptions affecting operations; that production, permitting, development, expansion and the ramp-up of operations at each of Agnico Eagle's properties proceeds on a basis consistent with current expectations and plans; that the environmental and water permits granted for the Kittila mine are restored by the SAC in its final decision and the decisions of the Vaasa Administrative Court have no material impact on the Kittila mine's operations; that the relevant metal prices, foreign exchange rates and prices for key mining and construction inputs (including labour and electricity) will be consistent with Agnico Eagle's expectations; the ability to realize the anticipated benefits of the Merger or implementing the business plan for the combined company, including as a result of difficulty in integrating the businesses of the companies involved; the ability to realize synergies from the Merger and Yamana Transaction and cost savings at the times, and to the extent, anticipated; that Agnico Eagle's current estimates of mineral reserves, mineral resources, mineral grades and metal recovery are accurate; that there are no material delays in the timing for completion of ongoing growth projects; that seismic activity at the Company's operations at LaRonde, Goldex and other properties is as expected by the Company and that the Company's efforts to mitigate its effect on mining operations are successful; that the Company's current plans to optimize production are successful; that there are no material variations in the current tax and regulatory environment; that governments, the Company or others do not take additional measures in response to the COVID-19 pandemic or otherwise that, individually or in the aggregate, materially affect the Company's ability to operate its business; that cautionary measures taken in connection with the COVID-19 pandemic do not affect productivity; and that measures taken relating to, or other effects of, the COVID-19 pandemic do not affect the Company's ability to obtain necessary supplies and deliver them to its mine sites. Many factors, known and unknown, could cause the actual results to be materially different from those expressed or implied by such forward looking statements. Such risks include, but are not limited to: the ability to realize the anticipated benefits of the Merger or implementing the business plan for Agnico Eagle following the Merger, including as a result of a delay or difficulty in integrating the businesses of the companies involved; the ability to realize the anticipated benefits of the Yamana Transaction; the ability to realize the anticipated benefits of the San Nicolás Transaction; the volatility of prices of gold and other metals; uncertainty of mineral reserves, mineral resources, mineral grades and mineral recovery estimates; uncertainty of future production, project development, capital expenditures and other costs; foreign exchange rate fluctuations; inflationary pressures; financing of additional capital requirements; cost of exploration and development programs; seismic activity at the Company's operations, including the LaRonde Complex and Goldex mine; mining risks; community protests, including by First Nations groups; risks associated with foreign operations; governmental and environmental regulation; the volatility of the Company's stock price; risks associated with the Company's currency, fuel and by-product metal derivative strategies; the extent and manner to which COVID-19, and measures taken by governments, the Company or others to attempt to reduce the spread of COVID-19 may affect the Company, whether directly or through effects on employee health, workforce productivity and availability (including the ability to transport personnel to fly-in/fly-out camps), travel restrictions, contractor availability, supply availability, ability to sell or deliver gold dore bars or concentrate, availability of insurance and the cost thereof, the ability to procure inputs required for the Company's operations and projects or other aspects of the Company's business; and uncertainties with respect to the effect on the global economy associated with the COVID-19 pandemic and measures taken to reduce the spread of COVID-19, any of which could negatively affect financial markets, including the trading price of the Company's shares and the price of gold, and could adversely affect the Company's ability to raise capital. For a more detailed discussion of such risks and other factors that may affect the Company's ability to achieve the expectations set forth in the forward-looking statements contained in this presentation, see the AIF and MD&A filed on SEDAR at www.sedar.com and included in the Form 40-F filed on EDGAR at www.sec.gov, as well as the Company's other filings with the Canadian securities regulators and the SEC. Other than as required by law, the Company does not intend, and does not assume any obligation, to update these forward-looking statements.

Further Information – For further details on Agnico Eagle's fourth quarter and full year 2022 results, please see the Company's news release dated February 16, 2023

Front Cover – Agnico Eagle's Canadian Malartic mine (50%) located in the Abitibi region of northwestern Quebec, taken in the third quarter of 2022.

NOTES TO INVESTORS

Note Regarding the Use of Non-GAAP Financial Measures

This presentation discloses certain financial performance measures, including "total cash costs per ounce", "all-in sustaining costs per ounce", "minesite costs per tonne", "net debt", "adjusted net income", "adjusted net income per share", "sustaining capital expenditures", "development capital expenditures" and "operating margin" that are not standardized measures under IFRS. These measures may not be comparable to similar measures reported by other gold mining companies. For a reconciliation of these measures to the most directly comparable financial information reported in the consolidated financial statements prepared in accordance with IFRS, other than adjusted net income, see "Reconciliation of Non-GAAP Financial Performance Measures" below.

The total cash costs per ounce of gold produced is reported on both a by-product basis (deducting by-product metal revenues from production costs) and co-product basis (without deducting by-product metal revenues). The total cash costs per ounce of gold produced on a by-product basis is calculated by adjusting production costs as recorded in the consolidated statements of income (loss) for by-product revenues, inventory production costs, the impact of purchase price allocation in connection with the Merger to inventory accounting, realized gains and losses on hedges of production costs, operational care and maintenance costs due to COVID-19, production costs associated with retrospective adjustments from the application of the IAS 16 amendments and other adjustments, which include the costs associated with a 5% in-kind royalty paid in respect of the Canadian Malartic mine, a 2% in-kind royalty paid in respect of the Detour Lake mine, a 1.5% in-kind royalty paid in respect of the Macassa mine, as well as smelting, refining and marketing charges and then dividing by the number of ounces of gold produced excluding production prior to the achievement of commercial production. Certain line items such as operational care and maintenance costs due to COVID-19 and realized gains and losses on hedges of production costs were previously classified as "other adjustments" and are now disclosed separately to provide additional detail on the reconciliation, allowing investors to better understand the impacts of such events on the cash operating costs per ounce and minesite costs per tonne. In addition, given the extraordinary nature of the fair value adjustment on inventory related to the Merger and the use of the total cash costs per ounce measure to reflect the cash generating capabilities of the Company's operations, the calculation of total cash costs per ounce for the Detour, Macassa and Fosterville mines have been adjusted for this purchase price allocation. The total cash costs per ounce of gold produced on a co-product basis is calculated in the same manner as the total cash costs per ounce of gold produced on a by-product basis, except that no adjustment is made for by-product metal revenues. Accordingly, the calculation of total cash costs per ounce of gold produced on a co-product basis does not reflect a reduction in production costs or smelting, refining and marketing charges associated with the production and sale of by-product metals. The total cash costs per ounce of gold produced is intended to provide information about the cash-generating capabilities of the Company's mining operations. Management also uses this measure to, and believes it is helpful to investors so they can, understand and monitor the performance of the Company's mining operations. The Company believes that total cash costs per ounce is useful to help investors understand the costs associated with producing gold and the economics of gold mining. As market prices for gold are quoted on a per ounce basis, using the total cash costs per ounce of gold produced on a by-product basis measure allows management and investors to assess a mine's cash-generating capabilities at various gold prices. Management is aware, and investors should note, that these per ounce measures of performance can be affected by fluctuations in exchange rates and, in the case of total cash costs per ounce of gold produced on a by-product basis, by-product metal prices. Management compensates for these inherent limitations by using, and investors should also consider, these measures in conjunction with minesite costs per tonne as well as other data prepared in accordance with IFRS. Management also performs sensitivity analysis in order to quantify the effects of fluctuating metal prices and exchange rates. Investors should note that total cash costs per ounce are not reflective of all cash expenditures as they do not include income tax payments, interest costs or dividend payments. This measure also does not include depreciation or amortization.

Agnico Eagle's primary business is gold production and the focus of its current operations and future development is on maximizing returns from gold production, with other metal production being incidental to the gold production process. Accordingly, all metals other than gold are considered by-products.

Total cash costs per ounce of gold produced is reported on a by-product basis because (i) the majority of the Company's revenues are from gold, (ii) the Company mines ore, which contains gold, silver, zinc, copper and other metals, (iii) it is not possible to specifically assign all costs to revenues from the gold, silver, zinc, copper and other metals the Company produces, (iv) it is a method used by management and the Board of Directors to monitor operations, and (v) many other gold producers disclose similar measures on a by-product rather than a co-product basis. Investors should also consider these measures in conjunction with other data prepared in accordance with IFRS.

All-in sustaining costs per ounce of gold produced on a by-product basis is calculated as the aggregate of total cash costs on a by-product basis, sustaining capital expenditures (including capitalized exploration), general and administrative expenses (including stock options), lease payments related to sustaining assets and reclamation expenses, and then dividing by the number of ounces of gold produced (excluding production prior to the achievement of commercial production). These additional costs reflect the additional expenditures that are required to be made to maintain current production levels. The AISC per ounce of gold produced on a co-product basis is calculated in the same manner as the AISC per ounce of gold produced on a by-product basis, except that the total cash costs on a co-product basis are used, meaning no adjustment is made for by-product metal revenues. AISC per ounce seeks to reflect total sustaining expenditures of producing and selling an ounce of gold while maintaining current operations. Management is aware, and investors should note, that these per ounce measures of performance can be affected by fluctuations in foreign exchange rates and, in the case of total cash costs per ounce and AISC of gold produced on a by-product basis, by-product metal prices. Management compensates for these inherent limitations by using these measures in conjunction with minesite costs per tonne as well as other data prepared in accordance with IFRS. Investors should note that AISC per ounce is not reflective of all cash expenditures as it does not include income tax payments, interest costs or dividend payments. This measure also does not include depreciation or amortization.

The World Gold Council ("WGC") is a non-regulatory market development organization for the gold industry. Although the WGC is not a mining industry regulatory organization, it has worked closely with its member companies to develop relevant non-GAAP measures. The Company follows the guidance on all-in sustaining costs released by the WGC in November 2018. Adoption of the AISC metric is voluntary and, notwithstanding the Company's adoption of the WGC's guidance, AISC per ounce of gold produced reported by the Company may not be comparable to data reported by other gold mining companies. The Company believes that this measure provides helpful information about operating performance. However, this non-GAAP measure should be considered together with other data prepared in accordance with IFRS as it is not necessarily indicative of operating costs or cash flow measures prepared in accordance with IFRS.

NOTES TO INVESTORS

Note Regarding the Use of Non-GAAP Financial Measures

Minesite costs per tonne are calculated by adjusting production costs as recorded in the consolidated statements of income (loss) for inventory production costs, operational care and maintenance costs due to COVID-19, and other adjustments, and then dividing by tonnage of ore processed (excluding the tonnage processed prior to the achievement of commercial production). As the total cash costs per ounce of gold produced can be affected by fluctuations in by-product metal prices and foreign exchange rates, management believes, and investors should note, that minesite costs per tonne is useful to investors in providing additional information regarding the performance of mining operations, eliminating the impact of varying production levels. Management also uses this measure to determine the economic viability of mining blocks. As each mining block is evaluated based on the net realizable value of each tonne mined, in order to be economically viable the estimated revenue on a per tonne basis must be in excess of the minesite costs per tonne. Management is aware, and investors should note, that this per tonne measure of performance can be affected by fluctuations in processing levels. This inherent limitation may be partially mitigated by using this measure in conjunction with production costs prepared in accordance with IFRS.

Net debt is calculated by adjusting the total of the current portion of long-term debt and non-current long-term debt as recorded on the consolidated balance sheet for deferred financing costs and cash and cash equivalents. Management believes the measure of net debt is useful to help investors to determine the Company's overall debt position and to evaluate future debt capacity of the Company.

Adjusted net income and adjusted net income per share are calculated by adjusting the net income as recorded in the consolidated statements of income (loss) for the effects of certain items that the Company believes are not reflective of the Company's underlying performance for the reporting period, including foreign currency translation gains or losses, realized and unrealized gains or losses on derivative financial instruments, impairment loss charges and reversals, environmental remediation, income and mining taxes adjustments as well as other non-recurring, unusual items (which includes changes in estimates of asset retirement obligations at closed sites and gains and losses on the disposal of assets). Adjusted net income per share is calculated by dividing adjusted net income by the number of shares outstanding on a basic and diluted basis. The Company believes that these generally accepted industry measures allow for the evaluation of the results of continuing operations and are useful in making comparisons between periods. Adjusted net income and adjusted net income per share are intended to provide investors with information about the Company's continuing income generating capabilities. Management uses these measures to, and believes it is helpful to investors so they can, understand and monitor for the operating performance of the Company in conjunction with other data prepared in accordance with IFRS.

Operating margin is calculated by deducting production costs from revenue from mining operations. In order to reconcile operating margin to net income as recorded in the consolidated financial statements, the Company adds the following items to the operating margin: income and mining taxes expense; other expenses (income); foreign currency translation (gain) loss; gain (loss) on derivative financial instruments; finance costs; general and administrative expenses; amortization of property, plant and mine development; exploration and corporate development expenses; and impairment losses (reversals). The Company believes that operating margin is a useful measure that represents the operating performance of its individual mines associated with the ongoing production and sale of gold and by-product metals without allocating Company-wide overhead, including exploration and corporate development expenses, amortization of property, plant and mine development, general and administrative expenses, finance costs, gain and losses on derivative financial instruments, environmental remediation costs, foreign currency translation gains and losses, other expenses and income and mining tax expenses. Management uses this measure internally to plan and forecast future operating results. This measure is intended to provide investors with additional information about the Company's underlying operating results and should be evaluated in conjunction with other data prepared in accordance with IFRS.

Sustaining capital expenditures are expenditures incurred during the production phase to sustain and maintain the existing assets so they can achieve constant expected levels of production from which the Company will derive economic benefits. Sustaining capital expenditures include expenditure for assets to retain their existing productive capacity as well as to enhance performance and reliability of the operations. Development capital expenditures represents the spending at new projects and/or expenditure at existing operations that is undertaken with the intention to increase production levels or mine life above the current plans. Management uses these measures in the capital allocation process and to assess the effectiveness of its investments. Management believes these measures are useful so investors can assess the purpose and effectiveness of the capital expenditures in each reporting period. The classification between sustaining and development capital expenditures does not have a standardized definition in accordance with IFRS and other companies may classify expenditures in a different manner.

This presentation also contains information as to estimated future total cash costs per ounce, AISC per ounce and minesite costs per tonne. The estimates are based upon the total cash costs per ounce, AISC per ounce and minesite costs per tonne that the Company expects to incur to mine gold at its mines and projects and, consistent with the reconciliation of these actual costs referred to above, do not include production costs attributable to accretion expense and other asset retirement costs, which will vary over time as each project is developed and mined. It is therefore not practicable to reconcile these forward-looking non-GAAP financial measures to the most comparable IFRS measure.

Note Regarding Production Guidance

The gold production guidance is based on the Company's mineral reserves but includes contingencies and assumes metal prices and foreign exchange rates that are different from those used in the mineral reserve estimates. These factors and others mean that the gold production guidance presented in this presentation does not reconcile exactly with the production models used to support these mineral reserves.

2022 – Solid Operational Performance; Important Strategic Consolidations

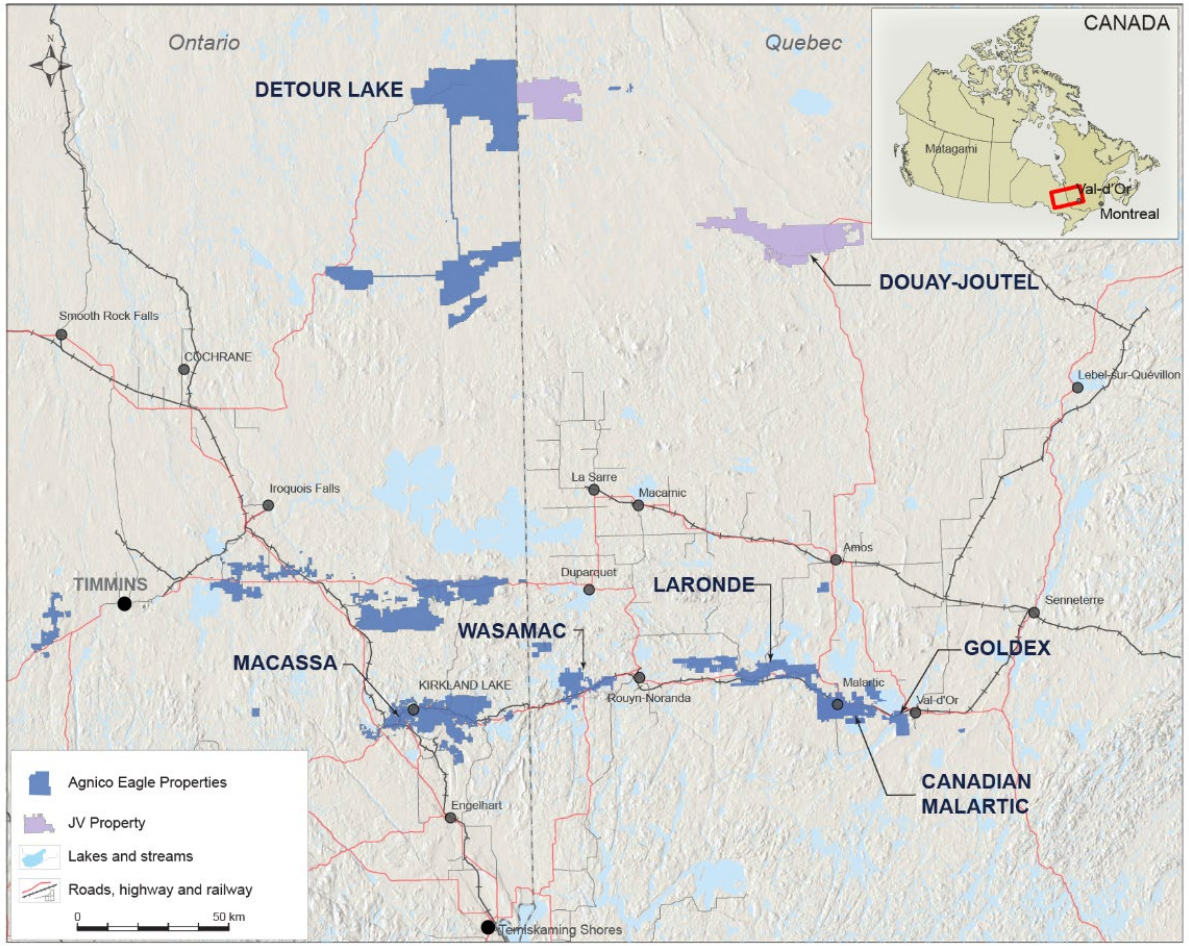

- **Solid operating performance in a challenging cost and workforce environment in Q4 and 2022**
  - Capital and gold production in line with 2022 guidance with costs slightly above the top end of the guidance range
  - Continued advancement of key development projects (Odyssey, Detour Lake mill expansion)
  - Repaid $225 million in debt
- **Gold mineral reserves increased by 9% to a record 48.7Moz[1], compared to year-end 2021[2]**
- **Continued consolidation of the Abitibi Gold Belt**
  - Integration of Kirkland Lake Gold
  - Pending acquisition of Yamana Gold's Canadian assets (including the other half of the world-class Canadian Malartic mine)
  - **Building on Agnico Eagle's strategy of consolidating positions in premier mining jurisdictions**
- **Quarterly dividend remains unchanged at $0.40 per share**

1.Gold reserves as at December 31, 2022, were based on a gold price assumption of $1,300/oz
2. 2021 mineral reserves pro forma combination of Agnico Eagle and Kirkland Lake Gold as at December 31, 2021

Abitibi Gold Belt – Region with low political risk and high geological potential

Region spans roughly 160km by 200 km

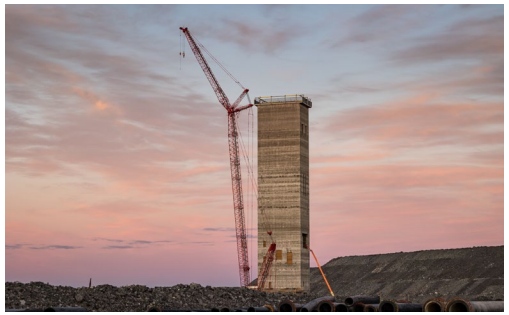

- Mineral reserves[1] ~31.5Moz
- Measured and indicated mineral resources[1] ~32.8Moz
- Inferred mineral resources[1] ~19.3Moz

- Transactions in 2022 solidify Agnico's presence in the Abitibi Gold Belt:
  - Strong competitive advantage from having operated in the region for over 50 years
  - Gold production between 1.9Moz and 2.1Moz per year in the region through 2025 from 5 operating mines, at production costs and total cash costs of ~$800/oz in 2023
  - Main hub for transportation and logistics for Nunavut, supports further gold production of 785koz to 875koz through 2025
  - Exploration focus is to upgrade and increase mineral resources at the operating mines and regional projects
- 100% ownership and proximity of operations provides a unique advantage to share resources:
  - Labour, skills and technical expertise
  - Infrastructure, milling capacity and tailings
  - Long standing relationships with communities and suppliers
- Facilitates operational efficiencies and cost control
- Accelerates the development of the project pipeline by utilizing existing infrastructure

Note: 1.Mineral reserves and mineral resources include he Company's properties in Quebec and Ontario, and the Canadian Malartic 50% ownership to be acquired with the Yamana Transaction but excluding Hammond Reef and Wasamac. See AEM February 16, 2023 press release and appendix for detailed breakdown of mineral reserves and mineral resources.

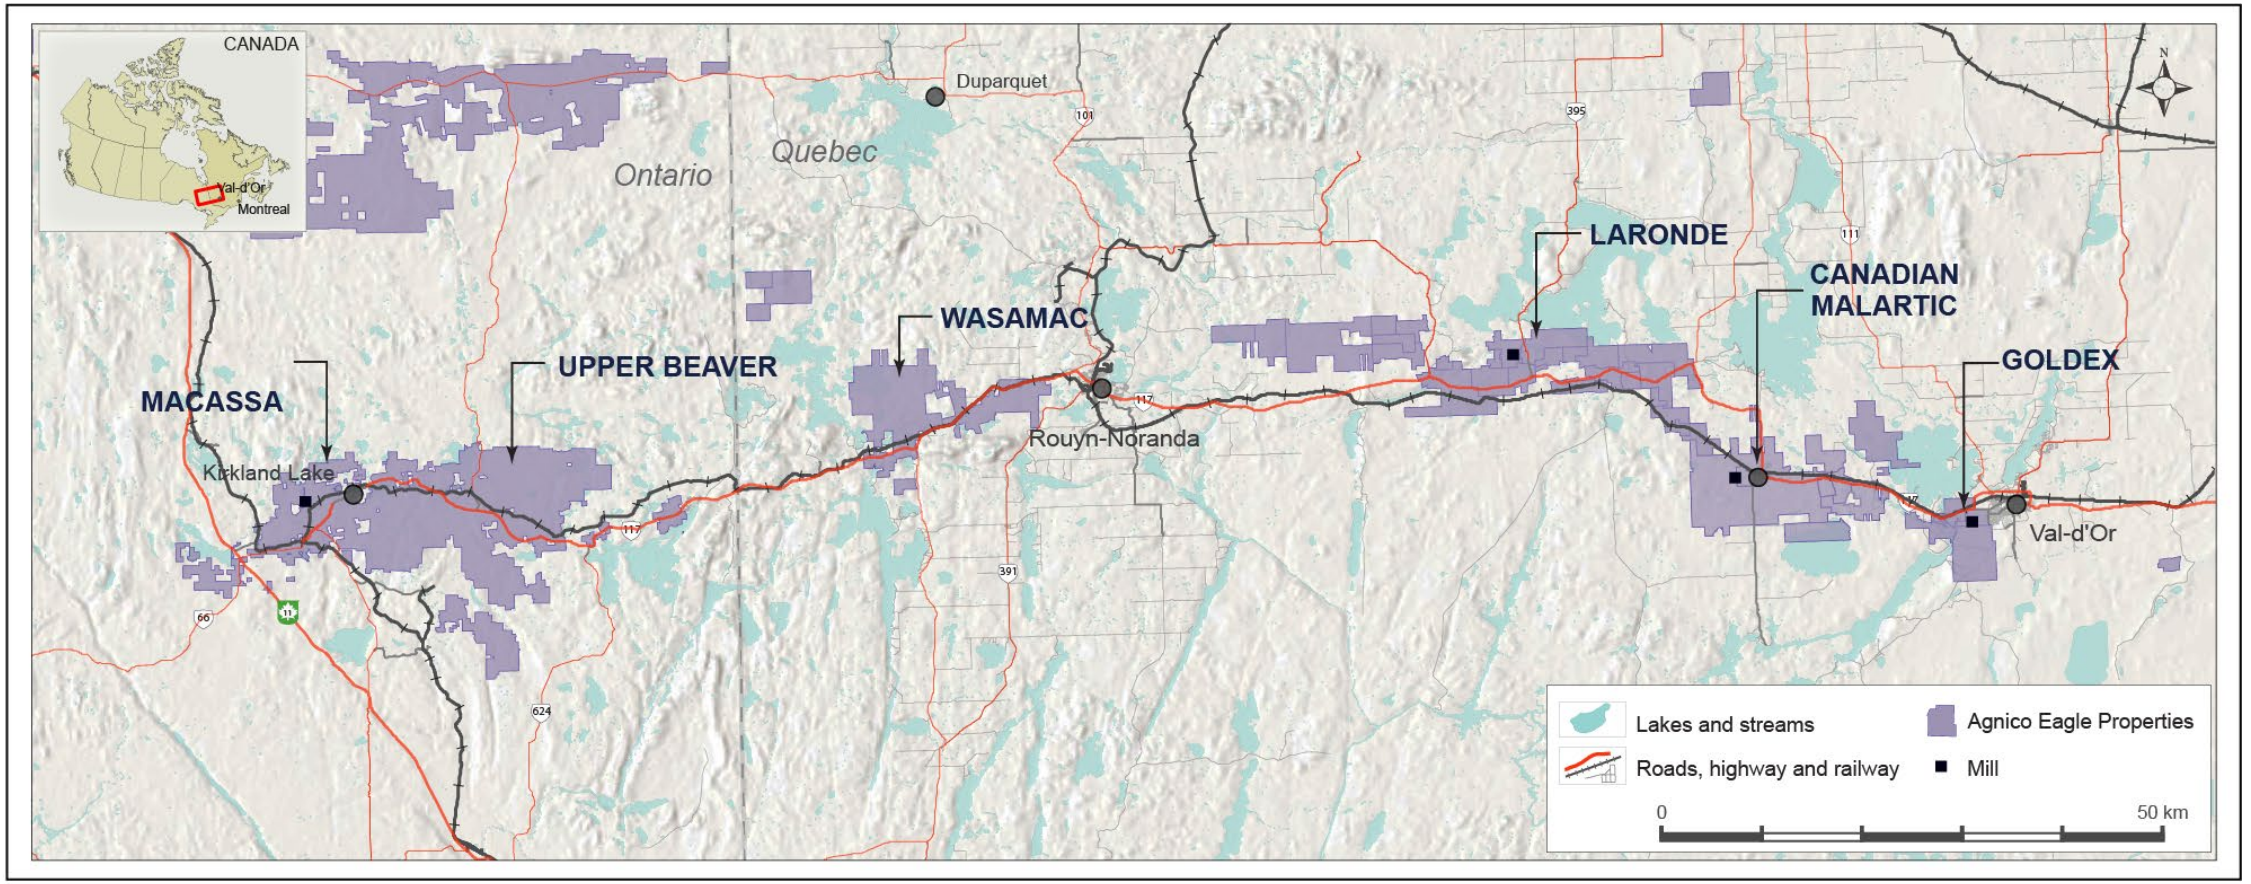

2023 Focus – Optimize the Abitibi Gold Belt Platform

- **Opportunities with the potential to increase capital returns with reduced execution and operating risk:**
  - **Detour Lake**
    - Continued exploration at depth and to the west to further evaluate underground mining potential
    - Assess potential mill expansion beyond 28Mtpa and up to 30Mtpa with minimal capital expenditures
    - Assess potential to produce 1Moz of gold per year, including potential for an UG operation
  - **Canadian Malartic Complex**
    - Continued exploration to expand and upgrade mineral resources at Odyssey
    - Initiating production at Odyssey from the ramp in March 2023; Commence shaft sinking
    - Assess potential for additional ore sources on the Canadian Malartic land package (Camflo, LTA)
  - **Utilize Excess Mill Capacity**
    - Assess potential to leverage excess mill capacity with regional opportunities
    - Potential to add up to 500,000 oz of annual production by 2030

Consolidating and Optimizing the Abitibi Gold Belt

- Excess mill capacity in the Abitibi region:
  - LZ5 mill circuit at the LaRonde Complex (~2,000tpd)
  - Canadian Malartic (~40,000tpd)
- Potential future regional sources of ore include:
  - Macassa Near Surface deposits and AK Zone (500-700tpd)
  - Upper Beaver and other Kirkland Lake satellite deposits (+5,000tpd)
  - Wasamac (+5,000tpd)
  - Potential to add up to 500koz of annual production by 2030

2022 Q4 and Full Year Highlights

- **Solid quarterly gold production and operating cash flow despite inflationary and operating challenges –** Payable gold production was 799koz at production costs of $834/oz, total cash costs of $863/oz and AISC of $1,231/oz
  - Higher costs from inflationary pressures following the completion of the Nunavut sealift
  - Revised mining plan at LaRonde to promote long term sustainability
  - Operating restrictions at Kittila pending permitting resolution
  - Record flooding and operating restrictions due to low frequency noise constraints at Fosterville
- **Record annual gold production –** Payable gold production 3,280,731oz * at production costs of $821/oz *, total cash costs of $780/oz* and AISC of $1,090/oz*, in line with the mid-point of 2022 production guidance and the top end of the cost guidance announced in February 2022
- **Operating Milestones –** Record annual gold production at Detour Lake (733koz), Amaruq (374koz) and Goldex (142koz since re-start in 2013)

Note: *Includes Full Year production and costs from Detour Lake mine, Macassa mine and Fosterville mine

Operating and Financial Results

Strong Quarterly Production and Costs

	Q4 2022			Full Year 2022		
	Production (Gold oz)	**Total Cash Costs** ($/oz)	**Operating Margin** ($000's)	**Production** (Gold oz)	**Total Cash Costs** ($/oz)	**Operating Margin*** ($000's)
LaRonde Complex	80,169	$832	$81,731	356,337	$703	$398,011
Canadian Malartic (50%)	86,439	789	83,535	329,396	787	340,203
Goldex	36,291	765	35,533	141,502	765	146,682

Total	**799,438**	**$863**	**$717,842**	**3,135,007**	**$793**	**$3,097,841**

Record Annual Operating Cash Flow

	Q4 2022	Q4 2021	Full Year 2022	Full Year 2021
Realized Gold Price ($/oz)	**$1,728**	$1,795	**$1,797**	$1,794
Revenues (millions)	**$1,385**	$952	**$5,741**	$3,870
Net Income (millions)	**$205**	$101	**$670**	$562
Net Income per share (basic)	**$0.45**	$0.41	**$1.53**	$2.31
Cash provided by operating activities (millions)	**$381**	$262	**$2,097**	$1,345
Operating Cash flow per share (basic)	**$0.84**	$1.07	**$4.79**	$5.52

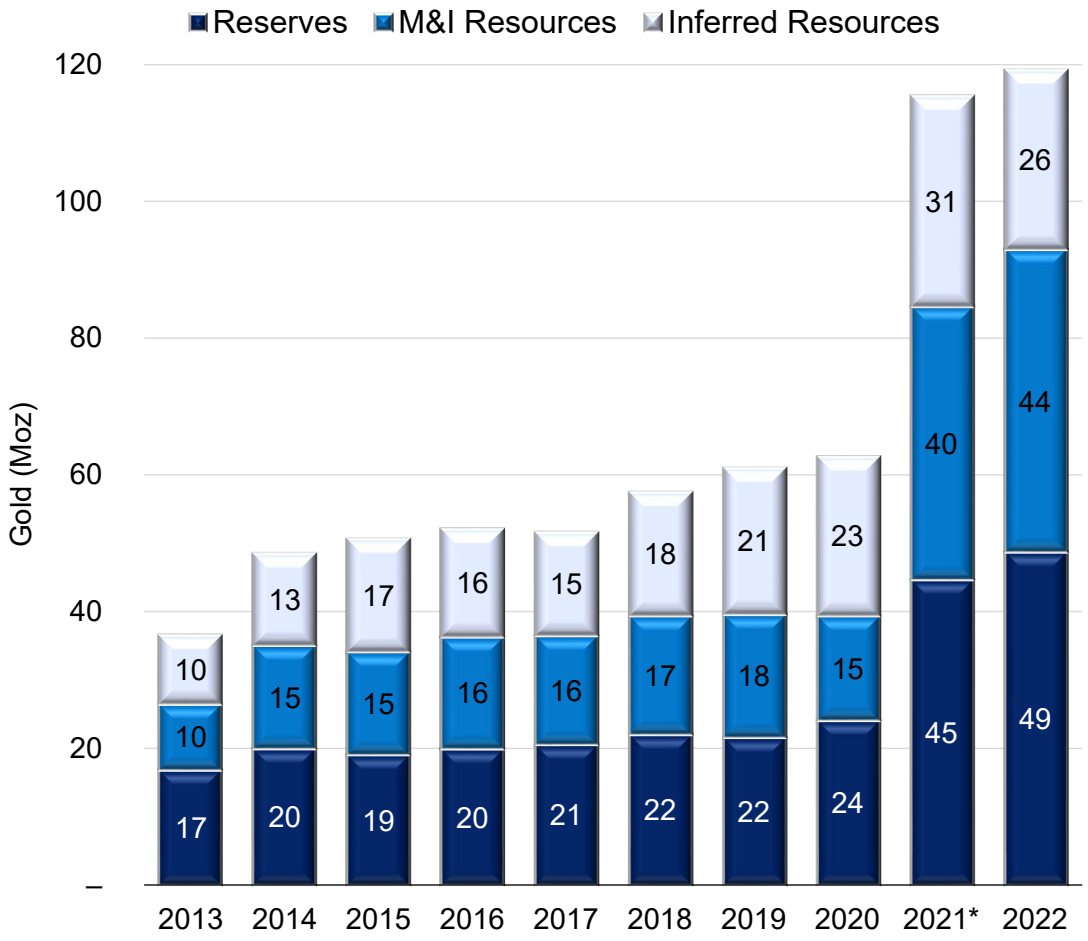

*Includes Hope Bay operating margin of $144k in 2022

Q4 2022 Total Operating Margin $718M

2022 Gold Mineral Reserves and Mineral Resources

Gold Mineral Reserves Increase to Record Level

*2021 mineral reserves and mineral resources pro forma combination of Agnico Eagle and Kirkland Lake Gold as at December 31, 2021

- Gold mineral reserves (based on a $1,300/oz gold price assumption) increased by 9% to a record 48.7Moz driven by drilling success at Detour Lake, replacement at Meliadine and first declaration of mineral reserves at Odyssey
- Total measured and indicated mineral resources increase 12% (4.6Moz) in 2022 to 44.2Moz of gold despite successful conversion of 6.0Moz to mineral reserves
- Inferred mineral resources decrease by 14% (4.3Moz) in 2022 to 26.3Moz of gold due to conversion

2023-2025 Production Outlook – Moderate Growth Through 2025

Year	Current Guidance (Moz)	Total Cash Costs ($/oz)	AISC ($/oz)	Capital Expenditures ($000s)	Exploration (Expensed / Capitalized)
2023	3.24 – 3.44	$840 - $890	$1,140 - $1,190	$1.41B	$205M / $123M
2024	3.35 – 3.55	Expected to decline	Expected to decline	Targeting $1.4 to $1.6 billion per year	
2025	3.40 – 3.60	Expected to decline	Expected to decline		

- Adjustment to production in 2023 compared to prior guidance:
  - Canadian Malartic (+255koz) – Add 9 months at 100% ownership
  - Meadowbank (+65koz) – Revised mine plan
  - LaRonde (-108koz) – Revised mine plan to ensure long term sustainability
  - Fosterville (-70koz) – Reduced throughput (from low-frequency noise restrictions)
  - Kittila (-50koz) – Permit restrictions
  - Pinos Altos (-43koz) – Delayed Cubiro, revised mining rate
- Costs affected by lower production and inflationary pressures on labour, energy and consumables
- Potential to add back 30koz to 80koz starting in 2023 subject to permit resolution at Kittila and lifting of noise constraints at Fosterville
- Potential for incremental gold production of 20koz to 40koz from AK deposit starting in 2024

Agnico Eagle's Vision

- Agnico Eagle has a simple, consistent, disciplined and proven approach to value creation
  - Robust production profile from assets in premier jurisdictions
  - Strong margins and cashflows
  - Proven leadership with a track record of building per share value
  - Maintain a strong financial position to provide strategic flexibility
- ESG stewardship – A trusted and valued member of the communities in which we operate for decades
- Consolidation of Abitibi Gold Belt expected to provide growth potential from existing mines and a pipeline of high-quality exploration and development assets
- Building on a long history of returning capital to shareholders – 39 years of consecutive dividend payments

Mineral Reserves and Mineral Resources

2022 GOLD MINERAL RESERVES AND MINERAL RESOURCES

Gold Mineral Reserves Increase 9% to Record Levels, Measured and Indicated Resources Increase 12% Offset by Successful Conversion of 6.3 Moz to Mineral Reserves

NOTES TO INVESTOR REGARDING THE USE OF MINERAL RESOURCES

The mineral reserve and mineral resource estimates contained in this presentation have been prepared in accordance with the Canadian securities administrators' (the "CSA") NI 43-101.
For United States reporting purposes, the SEC has adopted amendments to its disclosure rules (the "SEC Modernization Rules") to modernize the mining property disclosure requirements for issuers whose securities are registered with the SEC under the United States Securities Exchange Act of 1934, as amended, which became effective February 25, 2019. The SEC Modernization Rules more closely align the SEC's disclosure requirements and policies for mining properties with current industry and global regulatory practices and standards, including NI 43-101. Issuers were required to comply with the SEC Modernization Rules in their first fiscal year beginning on or after January 1, 2021, though Canadian issuers that report in the United States using the Multijurisdictional Disclosure System ("MJDS") may still use NI 43-101 rather than the SEC Modernization Rules when using the SEC's MJDS registration statement and annual report forms. Accordingly, mineral reserve and mineral resource information contained in this presentation may not be comparable to similar information disclosed by United States companies.
As a result of the adoption of the SEC Modernization Rules, the SEC now recognizes estimates of "measured mineral resources", "indicated mineral resources" and "inferred mineral resources." In addition, the SEC has amended definitions of "proven mineral reserves" and "probable mineral reserves" in the SEC Modernization Rules, with definitions that are substantially similar to those used in NI 43-101.

Investors are cautioned that while the SEC now recognizes "measured mineral resources", "indicated mineral resources" and "inferred mineral resources", investors should not assume that any part or all of the mineral deposits in these categories will ever be converted into a higher category of mineral resources or into mineral reserves. These terms have a great amount of uncertainty as to their economic and legal feasibility. Under Canadian regulations, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in limited circumstances. **Investors are cautioned not to assume that any "measured mineral resources", "indicated mineral**
107
resources", or "inferred mineral resources" that the Company reports in this presentation are or will be economically or legally mineable.
Further, "inferred mineral resources" have a great amount of uncertainty as to their existence and as to their economic and legal feasibility. It cannot be assumed that any part or all of an inferred mineral resource will ever be upgraded to a higher category.
The mineral reserve and mineral resource data set out in this presentation are estimates, and no assurance can be given that the anticipated tonnages and grades will be achieved or that the indicated level of recovery will be realized. The Company does not include equivalent gold ounces for by-product metals contained in mineral reserves in its calculation of contained ounces and mineral reserves are not reported as a subset of mineral resources.

Scientific and Technical Information
The scientific and technical information contained in this presentaion release relating to Nunavut, Quebec and Finland operations has been approved by Dominique Girard, Eng., Executive Vice President & Chief Operating Officer – Nunavut, Quebec & Europe; relating to Ontario, Australia and Mexico operations has been approved by Natasha Vaz, Executive Vice President & Chief Operating Officer – Ontario, Australia & Mexico; and relating to exploration has been approved by Guy Gosselin, Eng. and P.Geo., Executive Vice President, Exploration, each of whom is a "Qualified Person" for the purposes of NI 43-101.
The scientific and technical information relating to Agnico Eagle's mineral reserves and mineral resources contained herein (other than the Canadian Malartic mine) has been approved by Dyane Duquette, P.Geo., Vice President, Mineral Resources Management; relating to mineral reserves and mineral resources at the Canadian Malartic mine and the Odyssey project, has been approved by Patrick Fiset, Eng., Technical Services Manager at Canadian Malartic Corporation (for engineering open-pit), Sylvie Lampron, Eng., Senior Project Mine Engineer at Canadian Malartic Corporation (for engineering underground) and Pascal Lehouiller, P.Geo., Senior Resource Geologist at Canadian Malartic Corporation (for geology), each of whom is a "Qualified Person" for the purposes of NI 43-101.

The below metal price assumptions are below the three-year historic gold and silver price averages (from January 1, 2020 to December 31, 2022) of approximately $1,790 per ounce and $22.48 per ounce, respectively.
Mineral reserves are reported exclusive of mineral resources. Tonnage amounts and contained metal amounts set out in this table have been rounded to the nearest thousand, so may not aggregate to equal column totals. Mineral reserves are *in-situ*, taking into account all mining recoveries, before mill or heap leach recoveries. Underground mineral reserves and measured and indicated mineral resources are reported within mineable shapes and include internal and external dilution. Inferred mineral resources are reported within mineable shapes and include internal dilution. Mineable shape optimization parameters may differ for mineral reserves and mineral reserves.
The mineral reserves and mineral resources tonnages reported for silver, copper and zinc are a subset of the mineral reserves and mineral resources tonnages for gold. The Company's economic parameters follow the method accepted by the SEC by setting the maximum price allowed to be no more than the lesser of the three-year moving average and current spot price, which is a common industry standard. Given the current commodity price environment, Agnico Eagle continues to use more conservative gold and silver prices.

Metal Price for Mineral Reserve Estimation[1]

Gold (US$/oz)	Silver (US$/oz)	Copper (US$/lb)	Zinc (US$/lb)
$1,300	$18	$3.00	$1.00

[1] *Exceptions: US$1,350 per ounce of gold for Hope Bay and Hammond Reef; US$1,250 per ounce of gold for Akasaba West; US$1,21100 per ounce of gold and US$2.75 per pound of copper for Upper Beaver*

Exchange rates [2]

C$ per US$1.00	Mexican peso per US$1.00	AUD per US$1.00	US$ per €1.00
$1.30	MXP18.00	AUD1.36	EUR1.10

[2] *Exceptions: exchange rate of CAD$1.25 per US$1.00 for Upper Beaver, Upper Canada and Holt Complex, Detour Zone 58N; CAD$1.11 per US$1.0 for Aquarius; US$1.00 per EUR $1.15 for Barsele*

Mines / Projects	Metal Price for Mineral Resource Estimation [7]			
	Gold (US$/oz)	Silver (US$/oz)	Copper (US$/lb)	Zinc (US$/lb)
KLG Legacy operating mines and projects [3]	$1,500	-	-	-
AEM Legacy operating mines [4]	$1,625	$22.50	$3.75	$1.25
Pipeline projects	$1,688 [5]	$25.00 [6]	$3.75	$1.25

[3] *Detour, Macassa, Fosterville, Northern Territory*

[4] *LaRonde, LaRonde Zone 5, Goldex, Amaruq, Meliadine, Kittila, La India, Pinos Altos*

[5] *Hope Bay, Anoki-McBean, Hammond Reef, Chipriona, Tarachi, Santa Gertrudis*

[6] *Chipriona, Santa Gertrudis*

[7] *Exceptions: US$1,667 per ounce of gold for Canadian Malartic, Odyssey, Akasaba West, Upper Canada, El Barqueno Gold; US$1,533 per ounce of gold for Barsele; US$500 per ounce of gold for Aquarius. US$22.67 per ounce of silver El Barqueno Silver*

The above metal price assumptions are below the three-year historic gold and silver price averages (from January 1, 2020 to December 31, 2022) of approximately $1,790 per ounce and $22.48 per ounce, respectively.

NOTES TO INVESTOR REGARDING THE USE OF MINERAL RESOURCES (CONTINUED)

NI 43-101 requires mining companies to disclose mineral reserves and mineral resources using the subcategories of "proven mineral reserves", "probable mineral reserves", "measured mineral resources", "indicated mineral resources" and "inferred mineral resources". Mineral resources that are not mineral reserves do not have demonstrated economic viability.

A mineral reserve is the economically mineable part of a measured and/or indicated mineral resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at pre-feasibility or feasibility level as appropriate that include application of modifying factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified. The mineral reserves presented in this presentation release are separate from and not a portion of the mineral resources.
Modifying factors are considerations used to convert mineral resources to mineral reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.
A proven mineral reserve is the economically mineable part of a measured mineral resource. A proven mineral reserve implies a high degree of confidence in the modifying factors. A probable mineral reserve is the economically mineable part of an indicated and, in some circumstances, a measured mineral resource. The confidence in the modifying factors applying to a probable mineral reserve is lower than that applying to a proven mineral reserve.
A mineral resource is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.
A measured mineral resource is that part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with confidence sufficient to allow the application of modifying factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation. An indicated mineral resource is that part of a mineral resource for which quantity, grade or quality,

densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of modifying factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation. An inferred mineral resource is that part of a mineral resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity.

Investors are cautioned not to assume that part or all of an inferred mineral resource exists, or is economically or legally mineable.

A feasibility study is a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable modifying factors, together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate, at the time of reporting, that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a pre-feasibility study.

Additional Information

Additional information about each of the Company's material mineral projects as at December 31, 2022, including information regarding data verification, key assumptions, parameters and methods used to estimate mineral reserves and mineral resources and the risks that could materially affect the development of the mineral reserves and mineral resources required by sections 3.2 and 3.3 and paragraphs 3.4(a), (c) and (d) of NI 43-101 can be found in the Company's AIF and MD&A filed on SEDAR each of which forms a part of the Company's Form 40-F filed with the SEC on EDGAR and in the following technical reports filed on SEDAR in respect of the Company's material mineral properties: 2005 LaRonde Mineral Resource & Mineral Reserve Estimate Agnico-Eagle Mines Ltd. LaRonde Division (March 23, 2005); NI 43-101 Technical Report Canadian Malartic Mine, Québec, Canada (March 25, 2021); Technical Report on the December 31, 2009; Technical Report on the Mineral Resources and Mineral Reserves at Meadowbank Gold Complex including the Amaruq Satellite Mine Development, Nunavut, Canada as at December 31, 2017 (February 14, 2018); the Updated Technical Report on the Meliadine Gold Project, Nunavut, Canada (February 11, 2015); the Detour Lake Operation, Ontario, Canada NI 43-101 Technical Report as at July 26, 2021 (October 15, 2021); and the Updated NI 43-101 Technical Report Fosterville Gold Mine in the State of Victoria, Australia as at December 31, 2018 (April 1, 2019).
