CSG Invotas Unveils Orchestration Solution Suite

Big Data Capabilities and Real-Time Threat Response Offer Executives Innovative Options for Continuous Enterprise Security

ENGLEWOOD, Colo.--(BUSINESS WIRE)-- [CSG Invotas](#), the new enterprise security business from [CSG International, Inc.](#) ([NASDAQ: CSGS](#)), today announced its unique cyber-threat-response solution suite that gives security executives the ability to coordinate and manipulate devices across the enterprise to combat intrusions at machine speed.

CSG Invotas offers CIOs and CISOs a [revolutionary approach](#) to threat mitigation and eradication. Instead of simply detecting and analyzing intrusions, Invotas provides proven [automation and orchestration solutions](#) that respond in real time to cyber attacks. Invotas taps decades of CSG's deep domain expertise in complex automated workflow technologies to dramatically reduce the time it takes to identify an intrusion and take immediate action to protect against attack proliferation.

"Enterprises that adopt this type of automation for IT security can begin to defend key parts of their infrastructure at machine speeds, move toward unifying their currently heterogeneous security solutions, and free up trained security professionals to focus on real threat research instead of mundane configuration tasks," said Jeff Wilson, principal analyst for security at Infonetics Research.

Invotas solutions are technology agnostic. They work with a variety of hardware, software, and implementations regardless of vendor and they complement existing workflows and processes by using increasing levels of automation. The solution suite includes:

- [Invotas Security Orchestrator](#), which delivers a unified threat-response approach that dramatically improves response times and reduces risk exposure. Security Orchestrator, founded on communications-carrier-grade technology, acts on data from various sources, whether Invotas solutions, directly from security information and event management (SIEM), or other enterprise devices. It handles many tasks that security analysts perform manually by capturing institutional knowledge, automating or semi-automating existing workflows, and orchestrating configuration changes in real-time.
- [Invotas Data Orchestrator](#), which streamlines the handling of security alert information to improve the performance of enterprise and security operations. Data Orchestrator significantly reduces storage costs and bandwidth utilization by ingesting, filtering, cleansing, and correlating massive amounts of disparate data at machine speed. It improves the performance of SIEMs and network-monitoring tools, allowing them to extract more relevant results from business, operations, and security analytics.

"The next evolution of defense strategies requires both depth and breadth response capabilities to counter threats and attacks while they are in the enterprise," said Paul Nguyen, president of Invotas global security solutions. "Manual defenses augmented by point solutions are not enough to defend global organizations from relentless, well financed attacks. Invotas integrates with current threat-detection solutions to enable automated, semi-automated, and on-demand actions across complex security environments."

CSG Invotas boasts an experienced team of expert consultants that help clients diagnose security operations and recommend improvements based on industry best-practices. They deliver the latest innovations in security orchestration, unified architecture, and automation capabilities using the best-in-breed technology found in Invotas Security Orchestrator and Data Orchestrator.

Visit us at Mobile World Congress and RSA!

CSG will be unveiling exciting new offerings and features at two leading industry events February 24th - 27th. Learn more about Invotas and the entire portfolio of CSG solutions in Barcelona during [Mobile World Congress](#) at Hall 5, Stand 5B20, or in San Francisco at [RSA](#) at booth #2400 in the South Expo.

About CSG Invotas

[CSG Invotas™](#) offers security orchestration and automation solutions that provide dynamic, real-time management of large

security ecosystems. It enables security professionals to respond effectively to ever-changing cyber threats. Invotas builds upon CSG's proven solutions and expertise to support the mitigation and eradication of cyber attacks across complex enterprise environments.
