Jacobs launches Climate Action Plan on the 50th Anniversary of Earth Day

DALLAS, April 22, 2020 /PRNewswire/ -- On the 50th anniversary of Earth Day, **Jacobs** (NYSE:J) released a Climate Action Plan that outlines the commitments the company is making to help abate the climate crisis.

Jacobs' Climate Action Plan commits to help solve the climate crisis by achieving and maintaining 100% renewable energy, net zero carbon for the company's operations and business travel in 2020 and carbon negative for its operations and business travel by 2030.

"Today, we reveal a plan that sets us apart – capturing the shared passion, pride and drive of our people as we work to preserve our planet for future generations," said Jacobs Chair and CEO Steve Demetriou. "From the way we operate our business, to the work we perform with clients and other organizations, Jacobs' Climate Action Plan details how we will continue to make a positive environmental, societal and economic difference for businesses, governments and communities around the world."

The Climate Action Plan commitments and supporting delivery plans build on the foundations of Jacobs' **PlanBeyond™** strategy, which was launched in early 2019 to set out sustainability priorities across the business and how the company is helping sustain the planet for future generations.

The Climate Action Plan also commits us to set an ambitious, science-based target for carbon reductions across both our operations and supply chain emissions by 2030. Jacobs' biggest opportunity to affect climate change is through the work performed for clients – from the world's largest infrastructure projects to mission-critical outcomes and cutting-edge manufacturing – Jacobs is driven by its customers' most complex problems. The

company was recently recognized by Environmental Business International (EBI) with **six business achievement awards** for leadership and outstanding performance in its corporate, environmental and climate change work in 2019. By challenging what is expected, Jacobs can better design in resilience to the projected climate change effects and discover a new way forward.

While the COVID-19 pandemic has already made a profound impact on humanity and the global economy, it has shown communities, governments and citizens that it is possible for the world to unite together around a common cause. If people solve for climate change with the same sense of community and urgency, with everyone looking for new ways to commute, communicate and work, there is hope that the climate crisis can be slowed, and ultimately, curbed. Jacobs is doing its part to stay ahead and create these kinds of new standards the future needs.
