Forbes rankings are developed by SHOOK Research and are created using an algorithm that includes both qualitative (in-person, virtual and telephone due diligence meetings; client impact; industry experience; review of best practices and compliance records; and firm nominations) and quantitative (assets under management and revenue generated for their firms) data. Certain awards include a demographic component to qualify. Investment performance is not a criterion because client objectives and risk tolerances vary, and advisors rarely have audited performance reports. These rankings are based on the opinions of SHOOK Research, LLC, are not indicative of future performance or representative of any one client's experience and are based on data from the previous two calendar years.
