## Visteon leader discusses latest trends at industry event in India

2018-10-10

Investigating strategic opportunities and projecting company innovation, Visteon's Arun Devaraj, customer regional engineering lead in India, joined leaders in business and representatives of the media at a recent prestigious conference, targeted at technology and connectivity as drivers for growth and development.

Taking part in the event - hosted by globally-recognized business consulting firm Frost and Sullivan - Arun participated in focused industry talks on the latest auto trends, technology innovation and drivers for change in India's fast-growing auto environment.

Joining a host of senior executives representing global brands, Arun lent his experience to a panel discussion on: "Technology Opportunity Engines: Drive Exponential Growth in Your Organization," on Oct. 10. Creating a lively debate with leaders from Vodafone, Essar Group and Netmagic, Arun deliberated over key objectives within the auto industry and the integral factors that must be considered when positioning an organization for cultural, structural and technological development.

Arun was also on hand to receive the 2018 Indian Mobility Electronics and Software Solutions Technology Innovation award from the presiding Frost and Sullivan moderator - recognizing Visteon's pioneering work and advancements in this area.

The Frost and Sullivan summit delivered continuously fresh, innovative, and practical solutions, helping participants to stay abreast of the latest trends. The event also provided access to critical expertise on cross-industry intelligence as well as multiple networking opportunities for the high-level attendees.
