Visteon manufacturing plant in India completes two decades without a lost-time incident

2021-06-18

June marked an important milestone for Visteon plant operations: Visteon Electronics India (VEI), located in Chennai, became the company's first manufacturing facility to reach 20 years with zero lost-time cases.

VEI has implemented responsible and effective standards and work practices to ensure the safety of its workforce. Management frequently reviews operational elements such as rules and work permits, pedestrian safety, compliance to 5S and use of protective gear, in addition to multiple other parameters. All identified non-conformance, incidents and near misses are documented and investigated for root-cause analysis. This allows for corrective and preventive action implementation.

The team also prioritized behavioral safety and ergonomics by imparting training and conducting third-party audits. This helped address and avoid potential safety concerns that could be detrimental.

Additionally, all employees enroll in a health and wellness program, which serves to improve and maintain their health and overall well-being.
