## Visteon's SmartCore™ cockpit domain controller wins Automotive News PACE award

2018-04-10

VAN BUREN TOWNSHIP, Mich., April 10, 2018 — Visteon Corporation (Nasdaq: VC), a leading cockpit electronics technology supplier, has been awarded an Automotive News PACE Award for its industry-first cockpit domain controller platform, SmartCore™. The PACE Awards, announced April 9 in Detroit, honor innovation, technological advances and breakthrough processes developed by automotive suppliers.

SmartCore™ is the first cockpit domain controller platform to be launched in industry. Addressing the biggest trend in the cockpit electronics industry, it offers a solution to integrate the instrument cluster, infotainment system and other emerging technologies for the cockpit on a single system-on-chip (SOC). SmartCore™ helps deliver lower weight, cost and power consumption, which are increasingly important as the industry shifts toward electric powertrains. Launched this year with a global automaker based in Europe, SmartCore™ will be featured on several additional vehicle programs to be introduced over the next several years.
