Where Future Tech Titans Rise To Their Potential

2023-08-25

The mobility industry is booming! Technology is completely changing the way we drive. As a company leading the way in automotive technology, Visteon provides a wealth of opportunities for tech talent to thrive in the fast lane of innovation. We have a long-standing history of nurturing engineering generations across the globe. This has created a vast multinational network. Young professionals can connect, share ideas, and gain experience as they begin their careers in mobility with Visteon.

This is also the foundation of Visteon's global early career program, RISE, for recent or soon-to-be graduates across the world. Now in its second year, RISE provides a one-of-a-kind opportunity to jump-start their professional journeys as they work alongside highly skilled engineering teams on real-time projects for leading global automakers. What better way to transition from their studies to their career development?

RISE prioritizes professional development with a carefully curated blend of hands-on experience and expert mentorship. Leading engineering experts guide the newcomers to carve out their own impact, working on technology solutions that enable a software-defined and electrified future.

These young talents have the opportunity to make their mark on impactful projects that resonate on a global scale, exposing them to diverse technology areas including software and mechanical engineering. They help drive Visteon's mission to design and build a safer, more connected driving experience for people all around the world from day one.

Learn more about our global RISE program and how the next generations of tech talent make an impact as part of a leading tech company in automotive technology: <https://www.visteon.com/rise-at-visteon/>.
